**Attachments:** Childhood Lead Poisoning Prevention in Michigan.Medicaid updated 12.14.1....pptx; Lead by ProsperityRegion.pdf; AAP Medical Management of Childhood Lead Exposure-June-2013.pdf; 2015-10-21\_-\_Lead\_-\_Flint\_Water\_FINAL\_504265\_7.pdf; Parent\_Handout\_Sept2015\_501830\_7.pdf; deq-FlintWater-FightLead-HealthyDiet\_504857\_7.pdf; deq-flintwater-breastfeedingandlead\_503281\_7.pdf; ProviderQuickReference\_Sept2015\_501831\_7.pdf; deq-FlintWater-Provider-Ltr-FINAL\_504861\_7.pdf

Good afternoon,

IHP would like to thank you for participating in today's MCH Workgroup meeting. The discussion provided valuable insight for providing care to children with elevated blood lead levels.

Attached are the meeting materials including Nancy Peeler's presentation; Maps: Lead by Prosperity Region; and the AAP Recommendations on Medical Management of Childhood Lead Exposure and Poisoning.

In addition, you will find the lead resources/documents Kim Hamilton, Director, Managed Care Plan Division mentioned during the meeting:

- Frequently Asked Questions About Lead in Flint Water
- Parent Handout - Learn How to Protect Your Family: Create a Lead Safe Home
- Help Fight Lead Poisoning with a Healthy Diet
- Pregnant and Nursing Mothers: What You Need to Know About Lead Poisoning
- Blood Lead Level Quick Reference for Primary Care Providers
- Provider Letter (The letter was distributed by email to local physicians on October 30th, by the Genesee County Health Department.)

The materials are also available at: [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

Please feel free to share this email and the materials with additional health plan maternal/child health staff including health plan care/case managers, as appropriate.

The next meeting of the Maternal Child Health Workgroup is **March 7, 2016**.

We look forward to seeing you there!

Happy Holidays!

Debbie

**Subject:** Reminder: December 14, 2015 Maternal Child Health Workgroup Meeting

**Importance:** High

The next meeting of the Institute for Health Policy (IHP) Maternal Child Health Workgroup will be on **Monday, December 14, 2015 from 10:00 am – 12:00 noon**. The meeting will be held at the Michigan Public Health Institute (MPHI) Interactive Learning Center, 2436 Woodlake Circle, Suite 380, in Okemos. To view a map and driving directions to MPHI please click on this link: <https://www.mphi.org/contact/directions-maps/>.

Teleconferencing will be available. The dial-in number and participate code are below:

Dial-in number: 888-204-5984

Participant code: 527197

The December meeting is for **Medicaid Health Plans only** and will focus on Medicaid and policy updates and provide an opportunity for open discussion among participants (agenda attached). The topic of focus will be care coordination for children with elevated blood lead levels.

Please forward or share this message with health plan maternal/child health staff including health plan care/case managers, as appropriate. Also, feel free to contact us if you have items that you would like to add to the agenda regarding maternal and/or child health issues.

If you are planning to attend the meeting either in-person or by teleconference, **please RSVP to [ihp@hc.msu.edu](mailto:ihp@hc.msu.edu) by Thursday December 10, 2015.**

We look forward to your participation on December 14, 2015.

Warm regards,  
Debbie

# Childhood Lead Poisoning Prevention in Michigan

12.14.15

# Elevated Blood Lead Levels (EBLL) in Michigan 1998 - 2013

## Children less than Six Years of Age

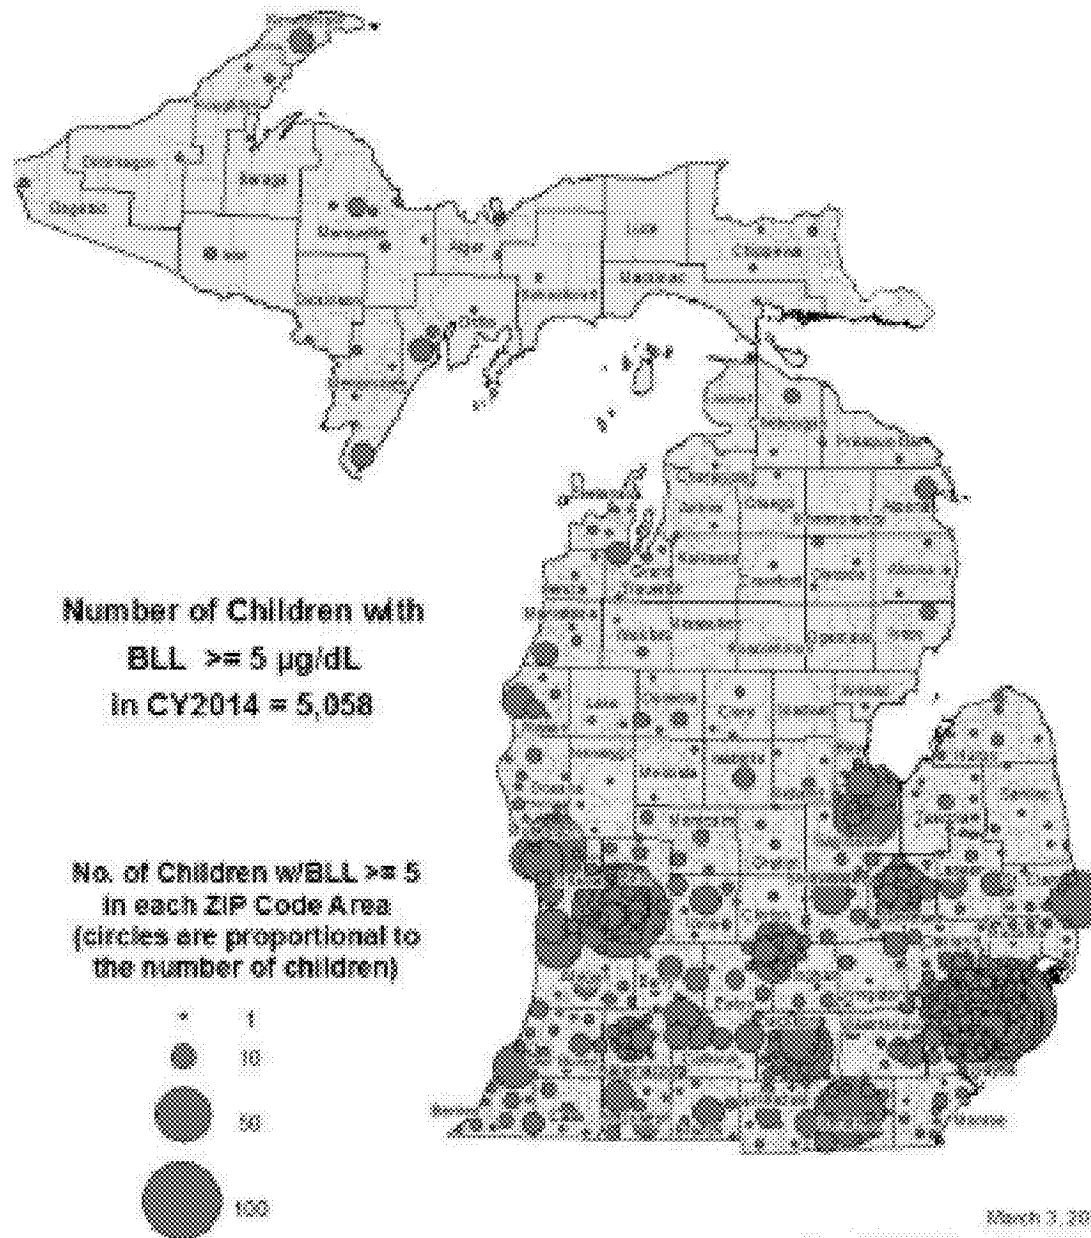

# Changes

In 2012, the *CDC Advisory Committee on Childhood Lead Poisoning Prevention* recommended:

- Eliminating the term 'blood lead level of concern'.
- Using a reference value based on the 97.5 percentile of the BLL distribution among children 1-5 years old in the US, currently **5 µg/dL**.
- Shifting the focus to **primary prevention** of lead exposure, reducing or eliminating lead sources before children are exposed, especially at levels of **5-14 µg/dL**.

Children less than Six years of Age  
with Blood Lead Levels (BLL)  $\geq 5$   $\mu\text{g}/\text{dL}$   
Calendar Year 2014

March 3, 2015

Source: MI-DEP CLUPPP surveillance database

Children with Confirmed Elevated Blood Lead Levels ( $\geq 5$   $\mu\text{g}/\text{dL}$ ) in CY 2014  
by County and Detroit City

Prosperity Regions  
1 through 10

Number of Children Insured by Medicaid  
with Confirmed BLLs 5 to 14 ug/dL  
in 2014

Number of Children with  
Confirmed BLLs 15 to 44 ug/dL  
in 2014

Number of Children with  
Confirmed BLLs  $\geq 45$  ug/dL  
in 2014  
(Hospitalization level)

# Changes MDHHS has made

- **MEDICAID POLICY**

- Adopted the AAP Recommendations on Medical Management of Childhood Lead Exposure and Poisoning.

- **OTHER CURRENT FUNDING**

- Distribution of state funding to Local Public Health agencies is data-driven and supports the focus on Education and Prevention activities.

# Ongoing issues for Michigan

- **TESTING**

- All children enrolled in Medicaid are tested twice (at 12 months and at 24 months)!
- Confirming all capillary tests  $\geq 5 \mu\text{g/dL}$ .
- Follow-up to monitor all elevated blood lead levels  $\geq 5 \mu\text{g/dL}$ .

- **PREVENTION/ANTICIPATORY GUIDANCE**

- Supporting Primary Care Providers to fulfill their enhanced role.

# Ongoing issues for Michigan

- **COMMUNITY-BASED SERVICES**

- There is no mandate in Michigan for the provision of:
  - In-home prevention education and support
  - In-home case management services
  - Elevated blood lead investigations
- Local Public Health Departments express concern that the current Medicaid reimbursement rates do not cover their actual costs; many have stopped providing such services.

# Opportunities

- **WORK MORE CLOSELY WITH MEDICAID HEALTH PLANS**
  - Assuring that health plans have necessary data; MDHHS Surveillance system data files currently go to Local Public Health weekly.
  - Enhanced monitoring/care coordination for needed testing/follow-up.
  - Enhanced anticipatory guidance offered by Primary Care Providers.

# Opportunities

- **WORK MORE CLOSELY WITH MEDICAID HEALTH PLANS**
  - Referral to available community-based services:
    - Current Medicaid policy pays for 2 Nursing Assessment visits in the home.
    - Current Medicaid policy pays for 1 Environmental blood lead investigation.
    - Identify a pool of trained, certified providers (could include Local Public Health) that are willing to provide the above services.

# Questions

- How can we work together to develop an approach to assure that community-based services are available?
- How might Community Health Workers play a role in primary prevention in the home of children with levels 5-14  $\mu\text{g}/\text{dL}$ ?
- How could Surveillance share more frequent data with MHPs? What format/frequency will be most helpful?

# **Contact Information**

## **Nursing Support & Education**

Confirmed BLLs  $\geq 45$  ug/dL  
in 2014  
(Hospitalization level)**

## Recommendations on Medical Management of Childhood Lead Exposure and Poisoning

No level of lead in the blood is safe. In 2012, the CDC established a new “reference value” for blood lead levels (5 mcg/dL), thereby lowering the level at which evaluation and intervention are recommended (CDC).

Lead level	Recommendation
<b>&lt; 5 mcg/dL</b>	<ol style="list-style-type: none"> <li>1. Review lab results with family. For reference, the geometric mean blood lead level for children 1-5 years old is less than 2 mcg/dL .</li> <li>2. Repeat the blood lead level in 6-12 months if the child is at high risk or risk changes during the timeframe. Ensure levels are done at 1 and 2 years of age.</li> <li>3. For children screened at age &lt; 12 months, consider retesting in 3-6 months as lead exposure may increase as mobility increases.</li> <li>4. Perform routine health maintenance including assessment of nutrition, physical and mental development, as well as iron deficiency risk factors.</li> <li>5. Provide anticipatory guidance on common sources of environmental lead exposure: paint in homes built prior to 1978, soil near roadways or other sources of lead, take-home exposures related to adult occupations, imported spices, cosmetics, folk remedies, and cookware.</li> </ol>
<b>5-14 mcg/dL</b>	<ol style="list-style-type: none"> <li>1. Perform steps as described above for levels &lt; 5 mcg/dL.</li> <li>2. Re-test venous blood lead level within 1-3 months to ensure the lead level is not rising. If it is stable or decreasing, retest the blood lead level in 3 months. Refer patient to local health authorities if such resources are available. Most states require elevated blood lead levels be reported to the state health department. Contact the CDC at 800-CDC-INFO (800-232-4636) or the National Lead Information Center at 800-424-LEAD (5323) for resources regarding lead poisoning prevention and local childhood lead poisoning prevention programs.</li> <li>3. Take a careful environmental history to identify potential sources of exposures (see #5 above) and provide preliminary advice about reducing/eliminating exposures. Take care to consider other children who may be exposed.</li> <li>4. Provide nutritional counseling related to calcium and iron. In addition, recommend having a fruit at every meal as iron absorption quadruples when taken with Vitamin C-containing foods. Encourage the consumption of iron-enriched foods (e.g., cereals, meats). Some children may be eligible for Special Supplemental Nutrition Program for Women, Infants and Child (WIC) or other nutritional counseling.</li> <li>5. Ensure iron sufficiency with adequate laboratory testing (CBC, Ferritin, CRP) and treatment per AAP guidelines. Consider starting a multivitamin with iron.</li> <li>6. Perform structured developmental screening evaluations at child health maintenance visits, as lead’s effect on development may manifest over years.</li> </ol>
<b>15-44 mcg/dL</b>	<ol style="list-style-type: none"> <li>1. Perform steps as described above for levels 5-14 mcg/dL.</li> <li>2. Confirm the blood lead level with repeat venous sample within 1 to 4 weeks.</li> <li>3. Additional, specific evaluation of the child, such as abdominal x-ray should be considered based on the environmental investigation and history (e.g., pica for paint chips, mouthing behaviors). Gut decontamination may be considered if leaded foreign bodies are visualized on x-ray. Any treatment for blood lead levels in this range should be done in consultation with an expert. Contact local PEHSU or PCC for guidance; see resources on back for contact information.</li> </ol>
<b>&gt;44 mcg/dL</b>	<ol style="list-style-type: none"> <li>1. Follow guidance for BLL 15-44 mcg/dL as listed above.</li> <li>2. Confirm the blood lead level with repeat venous lead level within 48 hours.</li> <li>3. Consider hospitalization and/or chelation therapy (managed with the assistance of an experienced provider). Safety of the home with respect to lead hazards, isolation of the lead source, family social situation, and chronicity of the exposure are factors that may influence management. Contact your regional PEHSU or PCC for assistance; see resources on back for contact information.</li> </ol>

## Recommendations on Medical Management of Childhood Lead Exposure and Poisoning

### Principles of Lead Exposure in Children

- A child's blood lead concentration depends on their environment, habits, and nutritional status. Each of these can influence lead absorption. Children with differing habits or nutritional status but who live in the same environment can vary on blood lead concentration. Further, as children age or change residences, habits or environments change creating or reducing lead exposure potential.
- While clinically evident effects such as anemia, abdominal pain, nephropathy, and encephalopathy are seen at levels  $>40 \mu\text{g/dL}$ , even levels below  $10 \mu\text{g/dL}$  are associated with subclinical effects such as inattention and hyperactivity, and decreased cognitive function. Levels above  $100 \mu\text{g/dL}$  may result in fatal cerebral edema.
- Lead exposure can be viewed as a lifelong exposure, even after blood lead levels decline. Bone acts as a reservoir for lead over an individual's lifetime. Childhood lead exposure has potential consequences for adult health and is linked to hypertension, renal insufficiency, and increased cardiovascular-related mortality.
- Since lead shares common absorptive mechanisms with iron, calcium, and zinc, nutritional deficiencies in these minerals promotes lead absorption. Acting synergistically with lead, deficiencies in these minerals can also worsen lead-related neurotoxicity.

### Principles of Lead Screening

- Lead screening is typically performed with a capillary specimen obtained by a finger prick with blood blotted onto a testing paper. Testing in this manner requires that the skin surface be clean; false positives are common. Therefore, elevated capillary blood lead levels should be followed by venipuncture testing to confirm the blood lead level. In cases where the capillary specimen demonstrates an elevated lead level but the follow-up venipuncture does not, it is important to recognize that the child may live in a lead-contaminated environment that resulted in contamination of the finger tip. Efforts should be made to identify and eliminate the source of lead in these cases. Where feasible, lead screening should be performed by venipuncture.

### Principles of Iron Deficiency Screening

- The iron deficiency state enhances absorption of ingested lead.
- Hemoglobin is a lagging indicator of iron deficiency and only 40% of children with anemia are iron deficient.
- Lead exposed children ( $\geq 5 \text{ mcg/dL}$ ) are at risk for iron deficiency and should be screened using CBC, Ferritin, and CRP. Alternatively, reticulocyte hemoglobin can be used, if available.
- Children with iron deficiency, with or without anemia, should be treated with iron supplementation.

(June 2013 update)

# Frequently Asked Questions About Lead in Flint Water

- Lead is hard to avoid completely. It can be found in old paint, water pipes and brass water faucets, in dirt, at some job sites, and in metal used for some hobbies.
- The amount of lead found in some Flint homes' drinking water could affect kids' health.
  - Even small amounts of lead can harm kids' health because they are little and still growing.
  - Adults are less likely to be harmed by the levels found in the water.
- Filter your drinking water using a NSF-approved filter.
  - Find a NSF-approved filter at [http://www.gchd.us/docs/lead\\_filter\\_information.pdf](http://www.gchd.us/docs/lead_filter_information.pdf).
  - If you use City of Flint water, you can call 211 to find out where you can pick up a free water filter.
- Some filters can remove up to 99% of the lead in water when used properly. To be sure your filter is removing as much lead as it can, carefully follow the instructions that came with it.
  - Change the filter cartridge as often as you should.
  - Run only cold water through the filter.
- Even after changes to the water system, it may take a while before lead levels in your home's water drop. Use the tips below to know when it's best to use filtered water:

## Lead in Water

Although your water may be a different color sometimes, it is not caused by lead. It's important to remember:

- You can't see, smell, or taste lead in water.
- Lead won't change the color of your water.
- The only way to know what your home's lead levels are is by having your water tested in a lab.

Please call the Flint Water Department at 810-787-6537 to request a free or low-cost water test.

## In The Kitchen

Use filtered tap water for:

- Drinking (including making coffee, drink mixes, juice, baby formula)
- Cooking (even if you boil the water, the lead will stay in the water and food)
- Washing fruits and vegetables

You can use unfiltered tap water for:

- Washing your hands
- Washing dishes
- Wiping down countertops

## Cleaning

You can use unfiltered tap water for:

- Mopping floors
- Washing clothes

Your washing machine and dryer won't put lead from the water into the air of your home.

## In the Bathroom

Use filtered tap water for:

- Brushing kids' teeth

You can use unfiltered tap water for:

- Showers
- Baths (don't let kids drink the water as they play in the tub)
- Brushing your teeth (if you are an adult)

Lead will not cause rashes or other skin problems. However, if chlorine levels or other cleaners are high in the water, it may cause itchy or dry skin (similar to what can happen when you swim in a pool).

## Caring for Pets

Use filtered tap water for:

- Pets' water bowls

You can use unfiltered tap water for:

- Baths

If you notice your pet acting differently than normal, please contact your vet.

## Other Sources of Lead in Your Home

### Lead Paint

- Homes built before 1978 likely have lead paint, both inside and outside.
- Old paint is the most common way that kids are exposed to lead.

### Dirt

- If you live in the city, there may be lead in the dirt outside your home.
- Before 1996, gas and the exhaust from cars contained lead. More lead will be found in dirt in busy traffic areas.

### Dust

- The dust in your home can contain tiny amounts of both the paint and the dirt that contain lead.

### Hobbies & Jobs

- Solder, fishing sinkers, bullets, and stained glass framing materials are some of the items in your home that may contain lead. You could also track home lead dust from your job site.

## Have Questions?

For more information about protecting yourself and your family from lead, please visit:

[www.michigan.gov/lead](http://www.michigan.gov/lead)

Or you can call the Michigan Department of Health and Human Services at:

**1-800-648-6942**

The staff at this number will help direct you to the best department that can answer your questions about lead in your home.

To request a free or low-cost water test, please call the Flint Water Department at:

**1-810-787-6537**

To find out if you can get a free water filter, please call 211.

# IS YOUR CHILD SAFE FROM LEAD POISONING?

## LEARN HOW TO PROTECT YOUR FAMILY: CREATE A LEAD SAFE HOME

### What causes lead poisoning?

There are many places in a home that can put babies and children in danger of lead poisoning.

Lead paint is the #1 cause of lead poisoning in Michigan and is often found in homes built before 1978. The older the home, the more likely that painted surfaces like windows, cupboards, doors and porches will contain lead paint.

Lead poisoning occurs most often when children come in contact with lead in the air, in dust particles and in lead paint. Lead can also be found in soil, drinking water if supplied by lead pipes, certain home remedies and is used in some hobbies and occupations.

Exposure to lead particles is a serious health threat. Carefully consider where your child spends time (childcare, relatives, your home) when thinking about lead poisoning hazards.

### How can I tell if my child has lead poisoning?

Talk to your doctor about testing your child's blood for lead poisoning.

#### When should my child be tested for lead poisoning?

Children should be tested at one and two years of age or if you think your child has been exposed to a lead hazard.

To learn more about lead poisoning prevention and blood lead testing, call the Childhood Lead Poisoning Prevention Project:

**(517) 335-8885**

**(888) 322-4453**

### Take this quiz to see if your child may have lead poisoning:

Symptoms of lead poisoning can be silent—and hard to recognize. Preventing lead poisoning before it happens is the best way to keep your family safe. Take this quiz to see if your child may be at risk:

Does your child currently live in a home built before 1950 or have they lived in a home built before 1950 in the recent past? Do they spend time at or often visit a home built before 1950?

Yes      No      Don't know

Does your child currently live in a home built before 1978 that was recently remodeled? Have they lived in or often visited a home built before 1978 that was recently remodeled?

Yes      No      Don't know

Does your child have a brother, sister or playmate with lead poisoning?

Yes      No      Don't know

Does your child live with an adult whose job or hobby involves lead?

Yes      No      Don't know

Does you or your child's caregiver use home remedies that may contain lead?

Yes      No      Don't know

If you answered NO to all of these questions, your child is probably not at risk for lead poisoning.

If you answered YES or DON'T KNOW to any of these questions, talk to your doctor about testing your child for lead poisoning.

# MAKE EVERY DAY LEAD SAFE

**Safe Cleaning.** Use these steps to help keep your home clean and reduce your child's risk of exposure. Use these tips to clean your windows, doors, floors, porches, stairs and child play areas.

**Put on gloves.** If you do not have rubber gloves, wash your hands well after cleaning.

**Use the right cleaners and disposable supplies.** Use soapy cleaners or products made to remove lead dust.

**Remove paint chips first.** Window areas and porches often have peeling paint and lead dust. Pick up visible chips and dispose of them in a plastic bag.

**Always wet-mop floors and window sills.** Do not broom lead dust. Dispose of cloths after wiping each area. If using a mop, replace water frequently.

**Don't use a vacuum unless it is a HEPA vacuum.** It will spread lead dust into the air you breathe. Some health departments have HEPA vacuums available to borrow.

**Rinse after cleaning.** Use clean water and a new mop head or fresh paper towels to wipe away suds.

**Always empty wash water down a toilet.**

**Repeat these steps often** when dirt and dust appear on floors, porches, window wells, window sills, stairs and children's play areas.

## For Homes with Lead Pipes

**If you use a water filter,** be sure it meets NSF/ANSI 53 standards for lead reduction.

✓ **Flush your pipes before drinking,** and only use cold water for cooking and mixing formula. Flush pipes by running the water for approximately 5 minutes.

✓ **Test.** Consider contacting your local water authority to have your water tested.

## Daily Lead Safe Practices

- Wash hands, bottles, pacifiers and toys often
- Always take off shoes before going into the house.
- Watch your child's diet. Foods high in calcium and iron help keep lead from being absorbed by a child's body.
- Avoid using power sanders, open-flame torches, heat guns, dry scrapers and dry sandpaper on painted surfaces.
- Fix peeling or chipping paint.
- Use a certified Repair and Remodeling Professional when making updates to your home
- Practice safe cleaning methods.

Thinking about remodeling your home? Need advice about identifying and removing lead paint? Call the Lead and Healthy Homes Section: 866-691-LEAD.

[www.michigan.gov/lead](http://www.michigan.gov/lead)

# Help Fight Lead Poisoning with a Healthy Diet

## Regularly Eat Healthy Foods

Children with empty stomachs absorb more lead than children with full stomachs.

Provide your child with four to six small meals during the day. The following nutrients can help protect your child from lead poisoning:

### Iron-Rich Foods

Normal levels of iron work to protect the body from the harmful effects of lead. Good sources of dietary iron include:

Lean red meats, fish, and chicken  
Iron-fortified cereals  
Dried fruits (raisins, prunes)

### Calcium-Rich Foods

Calcium reduces lead absorption and also helps make teeth and bones strong. Good sources of dietary calcium include:

Milk  
Yogurt  
Cheese  
Green leafy vegetables (spinach, kale, collard greens)

### Vitamin C-Rich Foods

Vitamin C and iron-rich foods work together to reduce lead absorption. Good sources of vitamin C include:

Oranges, orange juice  
Grapefruits, grapefruit juice  
Tomatoes, tomato juice  
Green peppers

# Simple Steps You Can Take

## to Protect Your Family from Lead Hazards

---

### If you think your home has high levels of lead:

- Make sure your children eat healthy, low-fat foods high in iron, calcium, and vitamin C.
- Get your children tested for lead, even if they seem healthy.
- Get your home tested for lead if it was built before 1978. Call 1-800-424-LEAD for more information.
- Always wash your hands before eating.
- Wash children's hands, bottles, pacifiers, and toys.
- Do not use imported pottery to store or serve food.
- Let tap water run for one minute before using.
- Use only cold water for making your baby's formula, drinking, and cooking.
- Regularly clean floors, windowsills, and other surfaces using wet methods that control dust.
- Wipe or remove shoes before entering your house.
- If you rent, it is your landlord's job to keep paint in good shape. Report peeling or chipping paint to your landlord and call your health department if the paint is not repaired safely.
- Take precautions to avoid exposure to lead dust when remodeling or renovating.
- Don't try to remove paint yourself!

---

# PREGNANT AND NURSING MOTHERS

## WHAT YOU NEED TO KNOW ABOUT LEAD POISONING

### What causes lead poisoning?

There are many factors that can put a pregnant woman or nursing mother at risk for lead poisoning.

In Michigan, lead paint is still the #1 cause of lead poisoning. It is often found in homes built before 1978 and the older the home, the more likely that painted surfaces like windows, cupboards, doors and porches will contain lead paint.

Other sources of exposure may include soil and water or jobs and hobbies using lead such as factory work, soldering, ammunitions or jewelry making. Some pottery glazes, imported spices and home remedies may also contain lead.

### Should I get tested?

Routine blood testing is NOT recommended for all pregnant women or nursing mothers. Talk to your doctor or local health department to learn more.

**If I test positive for lead poisoning can I continue to breastfeed?**

In most cases, breastfeeding is safe. However, if your blood lead level goes above 40 ug/dl or your level is greater than 20 ug/dl and your baby has a level above 5 ug/dl, you should talk with your doctor about continuing to breastfeed.

### What can I do to protect myself from lead?

- Wash hands, bottles, pacifiers and toys often.
- Always take off shoes before going into the house.
- Flush your pipes before drinking, and only use cold water for drinking or mixing formula. Flush pipes by running the water for approximately 5 minutes.
- Watch your diet carefully. Foods high in calcium and iron help keep lead from being absorbed by your body.
- Avoid using power sanders, open-flame torches, heat guns, dry scrapers and dry sandpaper on painted surfaces.
- Fix peeling or chipping paint.
- Use a certified Repair and Remodeling Professional when making updates to your home.
- Practice safe cleaning methods.

# CHILDHOOD LEAD POISONING

## Blood Lead Level (BLL) Quick Reference for Primary Care Providers

### Not Yet Tested

Consider screening ALL children between ages 1-6

Need for testing can be based on risk factors

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL <5

Review lead levels with family

Provide anticipatory guidance

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 5-14

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Perform environmental history. Consider other children who may be exposed

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Provide anticipatory guidance

Refer to case management

**FOLLOW UP:** Retest venous sample within 1-3 months to ensure BLL is not rising

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 15-44

Review lead levels with family

Confirm results with venous blood sample

Perform environmental history. Consider other children who may be exposed

Consider if a specific evaluation of the child is necessary such as an abdominal x-ray. Gut decontamination may be needed if leaded foreign bodies are visualized in x-ray

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Refer to case management

**FOLLOW UP:** Retest venous sample monthly until levels are <15, repeat every 1-3 months until levels are <5

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL >44

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Any treatment at this level should be performed in consultation with an expert at Children's Hospital of Michigan in Detroit.

**FOLLOW UP:** As directed by expert. Monthly venous samples will be required.

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

or (517) 335-8885**

October 30, 2015

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in lead pipes within the City of Flint's water system.

To help protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and Michigan Department of Health and Human Services are contacting you to assist you in providing guidance to support your families.

Children can be exposed to lead from drinking water in that runs through lead pipes, old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

**Identification.** Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause Attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dL. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions and water quality), we recommend that all children under age 6 living in the City of Flint or living in homes that use Flint water, attending school or childcare in Flint, or who spend time with a caregiver in the City of Flint, receive a blood lead test. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up. **Families should be encouraged to have their children tested immediately *either at their doctor's office or the Genesee County Health Department.***

**Management of Blood Lead Levels.** The following guidance is provided for management of childhood blood lead levels:

- **BLL < 5 ug/dL**
  - A lead level of less than 5 mcg/dL is not typically cause for concern.
  - Provide education and anticipatory guidance to ensure that lead levels do not rise.
  - Consider retesting in 12 months based on risk factors or concerns.

- **BLL >5 ug/dL**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached “Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.
- **BLL > 44 ug/dL.**
  - **Children with capillary results of 5 ug/dL and higher must have a confirmatory venous blood draw.**
  - Lead levels over 44 ug/dL may require hospitalization. Consult with an expert at the Children’s Hospital of Michigan in Detroit for additional guidance.
  - Families should receive anticipatory guidance, nutrition counseling, instruction on safe cleaning techniques and appropriate follow-up care from their primary care provider.
  - In-home services including case management and environmental investigations are available for all children with lead levels greater than 5 ug/dL. Refer patients to the Genesee County Health Department for this service.
  - Children with confirmed venous testing results greater than 5ug/dL within the past 18 months must be retested based on Medicaid policy and AAP guidelines. (See attached “Provider Quick Reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

**Reminder: All children covered by Medicaid must be tested at age 1 and 2.**

**Follow-up Care.** As providers, there are steps you can take to help support your families:

1. Continue to inform and educate families regarding lead risks and preventative steps that they can take to minimize their risks.
2. Encourage your families to use filtered water for drinking, mixing formula and washing dishes. Families can contact 2-1-1 for information on free NSF Certified water filters.
3. Healthy nutrition is critical for lead-exposed children. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. In addition, SNAP offers a Double Bucks program that can provide healthy foods for less.
4. Breastfeeding is highly protective and encouraged. However, if the mother’s blood lead level rises above 40ug/dL or her level is greater than 20 ug/dL and the baby has a level above 5 ug/dL breastfeeding is not recommended.

5. Because lead is a neuro-toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit.
6. Consider additional wrap-around and support services that will benefit your patients such as early childhood home visiting programs, early head start and head start. Call 2-1-1 for more information.

**Local Resources.** Several local resources are available to you and your patients:

- Blood Testing. Patients are encouraged to contact their primary care provider for testing. The Genesee County Health Department also administers lead tests. Patients in need of transportation should contact 2-1-1 for assistance.
- Water Testing. Water testing is free through the City of Flint Water Testing Plant. Patients can call 810-787-6537 to learn more.
- WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.
- Child Development. If you have concerns about a child's growth, development or learning contact 2-1-1 for a Home Visiting Program in your area.

**Websites and contact information.**

**Subject:** REMINDER: Version 6 of Lead Protocol and Testing

Hello all,

Attached are the notes from our call.

Just a little reminder to:

- Please review version 6 of the lead protocol and testing, particularly areas in Aqua color for clarification or changes.
- Connect with the SharePoint site to review, suggest, or provide any documents that should go out with the cover letters. **Nancy will send a notice out to everyone when the letters going to primary care providers and day care provided ready to view.** (Please see attached instructions for how to use the SharePoint site)
- For our call at 9am tomorrow, we will need to discuss and hopefully come to near completion on these items: 1.) Finalize letters and materials for communications and 2.) Finalize protocol.

Thanks,  
Rashmi

## Blood Testing/Case Mangement Protocol Planning Template

Oct 19, 2015 v6

GCHD, Hurley Pediatrics, and MDHHS

Toni LaRocco, Nancy Peeler, Rashmi Travis, , Mona Hanna-Attisha

### I. Prioritization of Testing

- A. Children <6 already tested positive by capillary since April 2014 (n=75)
  - 1. Every week GCHD letters go out, educational material is also sent out (nutrition lead sources, etc.)
  - 2. Sending letters at 5ug/dL (new; previously doing at 10 ug/dL)- Letter includes in bold to follow up with PCP
  - 3. 10 ug/dL: making phone call (or sending letter if unable to reach) offering an office visit where clients are given a lead kit which includes: vacuum with hepa filter, mop, simple green and soon will include NSF water filter, gloves and Swiffer. Education regarding use of above, nutrition and medical follow up guidance to return to PCP.; vacuum of HEPA Filter—if don't have specifications of HEPA filter—will not pick up lead particles—Toni will get clarification on who recommended this and Nancy will ask Bob Scott to check into this as well.
  - 4. 20 ug/dL: two visits with nurse and sanitarian with a referral to MDHHS Lead Safe Homes
- B. Retesting of Flint children with EBL of venous samples- all due for first or subsequent follow-ups
- C. School children those in the 3 schools identified as having elevated water lead (Freeman, Brunnell, Eisenhower)
- D. Every school facility- prioritization in this order:
  - 1. 0-5 years age
    - a. Daycare
    - b. Great Start Readiness Pre-school (funded by MDE)
    - c. Early Headstart
    - d. Headstart
  - 2. 5-12 years of age
    - a. Elementary
  - 3. >12 years of age
    - a. Middle
    - b. High

### II. Implementation of Testing

- A. **Payment for adults and child testing** covered by:
  - 1. Medicaid
  - 2. Insurance
  - 3. Local Health Department, if no Medicaid or insurance
- B. **Partners**

1. McLaren Health Plan
  - a. **Nov 5th** is a screening (capillary) event for McLaren clients as well as interested community members. This is a walk-in event-
  - b. Online lead registry (HHLPS) could be accessed to check child's status
    - a. McLaren has access to MCIR but not HHLPS
  - c. McLaren will contact their clients, and test their clients
  - d. GCHD will market to whole community, and GCHD WIC staff will draw other community members-cap or venous as indicated
  - e. GCHD will look up kids prior to drawing.....if ever drawn and elevated GCHD will do a venous draw instead.
2. UM-Flint Nursing students- Toni has been in touch with Nursing school and Licensed (BSN)nursing students may be able to assist Nov 5 and other times possible
3. Hurley Pediatrics (Mona)-( n=900)
  - a. Dr. Hanna- Attisha has all Hurley clinic kids that need a redraw back to April 2014
  - b. Also have list of all lead labs drawn fromHurley Lab back to April 2014
    - a. Dr. Hanna Attisha looked at all the Hurley lab-processed lead levels, specifically all EBLLs geocoded to the city of Flint after April 2014
    - b. As expected, they come from the following providers in decreasing order of frequency. This matches with the CHAP data in regards to providers who see the most Medicaid patients in the county:
      - i. Hurley Children's Clinic
      - ii. Hamilton Health Center (FQHC) - multiple clinics
      - iii. Mott Children's Health Center
      - iv. Solo Private Practices - M Akpinar, N Ali
  - c. Children's Healthcare Access Program-(CHAP) - target Medicaid groups by 4 clinics (Hamilton, Hurley, Dr. Akpinar, Mott Children's Clinic (Dr. Reynolds)
    - a. Can access majority of Medicaid children in Flint and have data-sharing agreements already in place.
    - b. Has social workers staff and 211 and case management, filter follow-up
    - c. Housed at GFHC
    - d. CHAP- GCHD Toni LaRocco spoke with Susan from CHAP 10/14
      - i. they are paid from a grant through the Health Endowment Fund
      - ii. Contracted (not signed yet but will be) to run Medicaid Match through GCHD.
      - iii. Doing things like arranging transportation to get lead levels drawn good role for them as it is reimbursable with Medicaid Outreach.

- d. Hamilton FQHC
- 4. Molina- Serve largest number of Peds/Medicaid-
- 5. GCMS Pete Levine---network information with all providers to get testing protocol information to them
- 6. Greater Flint Health Coalition-networking information to providers

### III. Sites for Testing

- A. Patient Centered Medical Home- Use primary providers whenever possible! Very important. Getting tests done outside of the medical home creates lack of continuity and lack of follow-up. Encourage as much as possible to “go see your doctor”.
  - a. Which then means that we need to educate the doctors with direct messaging about who to test, when to test, what is follow-up, available resources (211), premade patient education flyers, etc. Focus should be on lead in water education info.
- B. GCHD
  - 1. GCHD (Toni LaRocco) Meeting with PIO and UMFlint Nursing in order to get assistance with Lead testing clinics.
  - 2. GCHD (Toni LaRocco) will be contacting other Medicaid Health Plans to try and have clinic with them at the Farmers Market
- C. McLaren- at Burton Branch GCHD- all day- confirmed Nov 5, 2015
- D. McLaren-(**Nov 5, 2015**) at Burton Branch GCHD- all day
- E. Farmer’s Market (GCHD and Hurley Peds) held on (T, TH, Saturdays)
  - 1. Hurley staff can draw blood at this site
- F. Molina-TBD
- G. Other health plans- Being contacted
- H. Schools- request Friday October 16 from Flint Community Schools Superintendent Bilal Tawwab for testing to occur at schools.
  - Try to contact him Superintendent – Mona will do this to let him know what our plan is.
  - What is the purpose of this? It goes against the face of creating the primary care home, also signing a release is a challenge; it is natural way of place for kids to go to
  - Have lowest school nurses to students—very minimal capacity to do this.
  - Resolution with the Dept of Education
  - Go to Primary Care doctor first
  - Education with Primary Care doctors Testing
  - 1. Daycare, Early Head Start and Head Start are priority. Two letters will be formulated to provide information to the following groups Letter for Flint area parents with children in daycare, EHS/HS, GSRP, and schools

2. Letter for primary care providers serving children from the Flint area

- 
- Work with ISD and Flint Schools to give them education piece to work with them in the classroom—1.) elementary and secondary school education children to limit exposure – Faculty of school education—city of Flint schools and through ISD (U of M Flint schools); GISD controls Early Start and Head Start and GCARD—between these 2 resources may be able to get information out soon.
- Work with Office of Great Start for licensed daycares—Toni can get to those groups through immunizations and through Nancy can work with Office of Great Start
- Limit risk, great nutrition, doctor
- Pushing for a WIC person in each clinic
- MSU Education pushing for nutrition education—lead-exposed diet
- go to one of 4 clinics can get children in
- Pharmacy looking for formula for Iron, Calcium, and Vitamin C—Vitamin D supporting absorption of calcium
- Who will get the information: Genessee Medical Society, Greater Flint Health Coalition. and Pediatrics groups that work through Hurley.

-What information will go to providers:

-Cover letter

- Make sure it is of the literacy level 4th grade level

-Nutrition

-Basics of how to get a filter

-211 and connection other wraparound services

-Basic Prevention Strategies

-Testing—4 sites

-Nancy can check about putting Share Point site—to establish a central site—by noon today and get folder where we can all access the materials prior to their release.

-It is likely that this information could go to the Lead nurse, Karen Lishinski—send Share point address and email by noon.

-The protocol team will Review materials and what goes with letter

-Nancy and her team will draft a cover letter for review  
-Cover Letter could go out with Dr Wells, Dr. Johnson, and Dr. Mona Hanna-Attish signatures?

-Dr. Hanna-Attish is working with pharmacies on providing a vitamin rich in iron, calcium, vitamin C, and vitamin D

-MSU Extension in Genesee County is also pushing out educational materials on nutrition education

-for Early On – for every family of 5 and above-- -- not going to see it right away—established criteria is 10 Ug/dcl—most of the time with them aren't seen – can you make referrals to home visiting programs—primary care providers track and see; centralized home visiting hub—take a referral and send to other—GCHD to have a conversation with Dawn (in charge of Home Visiting Hub); if Hub can serve as single point of referral

-At home services—trauma informed systems of care collaborative—toxic stress exposures—some resources in CMH, parenting resources—conversation with Dawn and GCHD—a good portion can get information through CHAP on lead issues

-Most of the Hurley kids have been followed up to reach levels below 5 or recommend follow-up testing.

-Try to contact him Superintendent –Dr. Hanna-Attish will do this to let him know what our plan is.

If the Superintendent's call came through to Eden, she can connect with him as well to explain rationale and importance getting information out to providers.

#### **IV. Registration of lead testing clients**

A. HEALTH BLOOD LEAD ANALYSIS REPORTING (By authority conferred on the department of community health by 1978 PA 368, MCL 333.5111(1) and (2)(f), 333.5474(1)(c), and 333.20531; 1978 PA 312, MCL 325.72(a)(i), MCL 325.78; and Executive Reorganization Order No. 1996-1, MCL 330.3101):

1. All clients drawn will sign a release allowing result to be shared with primary provider
2. Upon initiating a request for blood lead analysis, the physician/provider or user ordering the blood lead analysis shall collect the following information:
  - (a) All of the following information with respect to the individual tested:
    - (i) Name.
    - (ii) Sex
    - (iii) The individual's ethnicity including either of the following:
      - (a) Hispanic or Latino/Latina.

- (b) Not Hispanic of Latino/Latina.
- (iv) The individual's race, noting the following:
  - (a) American Indian or Alaska Native.
  - (b) Asian.
  - (c) Black or African American.
  - (d) Native Hawaiian or Other Pacific Islander.
  - (e) White or Caucasian.
- (v) Birthdate.
- (vi) Address, including county, and, to the extent available, whether the residence or property is owned or rented.
- (vii) Telephone number.
- (viii) Social security number and Medicaid number, if applicable.
- (ix) If the individual is a minor, the name of a parent or guardian.
- (x) If the individual is an adult, the name of his or her employer.
- (xi) A secondary contact for the individual tested or, if the individual is a minor, a secondary contact for the individual's parent or guardian, including, to the extent available, name and phone number of the secondary contact.
- (b) The date of the sample collection.
- (c) The type of sample (capillary or venous).
- (d) The physician's/provider's or user's name, name of practice (if applicable), telephone number, fax number, email address, and mailing address.

**V. Handling of Results/messaging**

- A. CLPP and GCHD currently have protocol lab test result sharing (HHL PSS)
  - 1. Bob Scott can assist in navigation
  - 2. MDHHS Bureau of Labs can provide surge capacity for lab testing if needed
- B. Secondary prevention messaging for all community
  - 1. nutrition, good vitamins
  - 2. wrap-around services
  - 3. Breastfeeding, breastfeeding, breastfeeding – breastfeeding is protective for lead in water! Increase number of LC's, support breastfeeding peer programs, etc. Flint has low breastfeeding rate.
  - 4. positive parenting/nurse family partnership, infant support services
  - 5. WIC enrollment
  - 6. SNAP double bucks enrollment

## **EBL Investigations/Case Management Protocol**

### **A. Payment for EBL Investigations:**

1. Budgeted currently for 250 EBL investigations (to include water testing) for every child with elevated blood lead > 5mcg/dl.
2. The U.S. Department of Health and Human Services recommends that BLLs among all adults be reduced to <10 µg/d- so follow-up for adults will be at levels >10 mcg/dl (<http://www.cdc.gov/niosh/topics/ables/description.html>)
3. Medicaid will pay for 2 nursing visits following up for their clients

### **B. EBL Investigation Implementation**

**I. Actions and Assignments for Week of October 19, 2015 (Highlighted red is complete)**

- A. GCHD/Toni LaRocco and CHAP will contact Molina and other health plans to set up similar program as McLaren
- B. GCHD/Toni la Rocco will contact all health plans- if issues, contact Wells
- C. MDHHS will provide support as requested for any events
- D. Hilda at GCHD needs to blast provider information about lead to all providers (blast fax and list serves)

**E. FAQ water lead sheet to be sent out (completed October 15, 2015)**

- F. Dr. Hanna- Attisha and GCHD-If need for increased capillary testing machines---advise MDHHS

- G. Activities/follow up by Nancy/Bob

- 1. Work with Communications to support linkage to other early childhood/school state partners at MDE that we already work with that were listed in the plan - Office of Great Start is the link to child care providers (related to subsidy payments and to their subcontract to ECIC to run regional child care resource/TA centers); they are also the state liaison to Head Start/Early Head Start and the Great Start Readiness at-risk preschools. And of course their School Health office.

- 2. Access to HHPSS data system - currently only GCHD has access - Bob thinks that 2 staff there have been trained to use the system, but we need to confirm when we are back at the office. As I referenced above, we are looking at lead privacy laws to see who else (besides GCHD) might be able to have access to the CLPPP data about follow-up testing.

**3. Also, Bob can attend the event on November 5th**

- 4. Regarding CLPPP sending our list of children needing follow-up to Hurley (when we think there is a Hurley provider), we are also confirming that we can do that based on privacy laws.

- 5. We will follow up to make sure that the new CLPPP toolkit materials for providers get out to all of you - our Provider Quick Reference document, and the video Eden referenced is coming soon

- 6. Exploring legal issues around access to the data.

- H. Wells will get back with Flint City Superintendent regarding issues of school clinics depending upon October 19 meeting

- I. ALL- Develop messaging for all healthcare providers in Flint regarding testing, getting their clients in for testing, and using an approved form that requests required reporting information.

- J. MDHHS Wes Priem-Develop form for blood test registration/required information

- K. ALL - Disseminate form

## Questions from Nancy/Bob –October 14

- Medicaid will pay for 2 nursing visits. Toni, I wanted to double check, at what levels is GCHD currently sending out nurses to follow up on elevated blood lead levels (even if only 2 visits) ? And I wasn't sure if I understood on the call - is GCHD billing Medicaid for those visits for children enrolled in Medicaid? Are billing for those visits
- We agree that CHAP could be a good resource that could try to find kids and help get them connected for testing/follow-up testing. Are they paid by health plans/clinics to carry out activities, e.g. that is who their direction comes from (I know that was the model in Kent County)? I ask that related to our thinking about who the CLPPP data (e.g. access to the HHLPPS data system) could go to - we have to explore the privacy laws for the lead data.
- We concur about using Lead Care machines, but only if there is a better protocol to ensure that children with an elevated capillary test get back for venous testing.

-McLaren doing filter paper –if show up at GCHD doing Lead care machine—can get results that day—elevated capillary—nutrition information, send results with all of that regardless of elevated

-Release signed at Nov 5<sup>th</sup> event—mailing letter to family and letter to doctor.

-Other clinics—Toni has connected Molina, Meridian, and McLaren; Total HealthCare has small % of clients—looking at HEDIS results and looking to those kids of who haven't been tested; biggest offer is transportation—CHAP can help arrange for transportation—for Medicaid outreach.—include same phone number for school letter.

Next Call – Wed morning 10/21 9AM to finalize documents for distribution to providers and schools.

**Attachments:** Rashmi OGS 1014.ppt

Bust this out and finish for Rashmi. I'm pretty sure Charlie is OK--but Rashmi asked me to send it to her tomorrow (Tuesday)--and in the event something happens, I don't want to leave you hanging (I also don't have internet at home yet)...

So:

1. I am waiting for you to approve the interagency slides for lead and HV
2. I need the interagency bullet points from Stan Bein for WIC
3. I need to address a comment with Rashmi--she asked me to change the MHVI or references to early childhood home visiting to MIECHV...I wanted to explain in an email that MHVI is the correct term, not MIECHV (I'm sure she thinks I mis spelled it...)
4. All done:)

Anyway, hope CAN went great! And HOPEFULLY, talk to you tomorrow!!!

Em

To: Houk, Emily (DHHS)  
Subject: Flint parent letter

Content we need in the letter (either in or attached, we need to develop the recommendation) -

letter to parents (at 4th grade reading level) --intro, why they should care, lead in water, lead in other sources --how to get filters --nutrition information (including vitamins) and breastfeeding --TESTING - list the community clinics that we know about and also GO TO YOUR PRIMARY CARE PROVIDER --WIC and SNAP benefits --HV programs/other community resources referrals --help with transportation

Attachments about some of the above (and which ones)

need to leave space to insert info about community testing clinics need to leave space to insert a phone number to call (CHAP) for help with transportation

Hope this helps

Interesting. Could one of you forward me the letter itself, as I'd like to read it? Karen, let's put this on the list for our Tuesday call with them - I'd like to better understand how it is used, and we can share what we noticed about it, for their information (e.g. it is sent after what kind of call?). We could possibly email them feedback on Monday, to discuss on Tuesday...what are your thoughts?

Nancy

Sent from my iPad

On Dec 18, 2015, at 11:47 AM, Houk, Emily (DHHS) <[HoukE@michigan.gov](mailto:HoukE@michigan.gov)> wrote:

No. This is not "the parent letter"...I THINK that letter is the one that we sent to ALL parents in the area. Although you've raised an interesting question and I will check with Michelle.

Here are some thoughts:

1. This letter doesn't address water--at all. Nothing on filters, cooking or any of the water-related guidance.

2. Do you know how this is used? Does it come with info that directs the family to CM if they are above 5? When I read this it is a little unclear to me what a parent should do....what if I'm a

20 cap? Shouldn't I be going for a confirmatory right away? (I assume they are going to call them directly, but still).

3. According to the Kincaid scale--this is a 7.5 grade reading level-with 60% readability at that level (meaning it's hard for readers who are competent at that level to grasp the content easily).

Hope this is helpful.

Mark Valacak, M.P.H., Health Officer  
Gary K. Johnson, M.D., M.P.H., Medical Director

12/15/2015

Dear parent(s)/guardian(s):

Thank you for having your child screened for lead poisoning. Please find enclosed the result of your child's lead level. A lead level **equal to or above 5.0 ug/dL** means that your child may have been exposed to lead. Lead poisoning is a serious illness which can cause behavior and learning problems. If your child's lead level is **5.0 ug/dL** or above another test should be completed within 1 to 3 months to confirm this level is not going up. A follow up venous blood lead test needs to be taken from the vein to confirm the first test results. Keep this letter and your results for your child's record.

Lead most often enters a child's body through their mouth from the lead dust on their hands, toys, or food. Frequent handwashing is the simplest way to reduce lead exposure.

You can also reduce your child's exposure to lead and risk for lead poisoning by following these simple tips:

- ☐ Provide a balanced diet with three meals & 2-3 snacks per day. A full stomach is less likely to absorb lead.
- ☐ Provide a diet high in protein, iron, calcium and Vitamin C. Children with good diets absorb less lead.
- ☐ Foods high in these vital nutrients include meats, dairy foods, fortified cereals & fruits & vegetables.
- ☐ Teach your child to wash his/her hands before eating snacks or meals using soap and warm water.
- ☐ Wash toys and pacifiers frequently with hot soapy water.
- ☐ Vacuum carpeting frequently; use door mats; take off shoes while indoors.
- ☐ Damp mop & damp dust floors weekly or more often.
- ☐ Clean windowsills weekly using hot, soapy water.
- ☐ Cover outside play areas with grass, wood chips, pebbles or decking.
- ☐ Closely supervise your child; watch what your child puts in his/her mouth.
- ☐ Teach your child "yucky" and "yummy"; dirt is "yucky"; yogurt is "yummy"

**YOU MUST CALL YOUR CHILD'S DOCTOR TO SCHEDULE AN APPOINTMENT** for the follow up lead test. If your child does not have health insurance coverage, he/she may be eligible for MICHild or Healthy Kids. For more information on these programs, please call (810) 257-3039 or 1-888-988-6300.

The Women, Infants and Children program provides nutritious foods, health assessments and nutrition education for families with children. If you are not currently on WIC, you may be eligible for WIC. Please call (810) 237-4537 or 1-800-26-BIRTH for more information. If you have any other questions please feel free to contact this office at (810) 257-3833.

**Flint Water Public Health Response: MDHHS Action Plan Summary**

**Updated 10-28-15**

<b>TASK</b>	<b>STATUS</b>	<b>ACTION</b>	<b>DATE COMPLETED</b>
<b>Filter Distribution</b>	Residents may continue to obtain filters from GCCARD (both sites 9-4PM) and MDHHS clients can continue to obtain filters at the two MDHHS office locations or the GCCARD sites. As of October 22, DHHS/GCCARD has issued 9728 filters, 95 pitchers.	No action indicated, informational only.	NA
<b>Filter Replacement Distribution</b>	The procedure is in place for replacement cartridge distribution including an abbreviated application for residents to apply for and obtain cartridge replacement. Cartridge replacement will occur at same locations as filter sites. DHHS is also placing an order for 750 replacement filters for the 8-cup Zerowater filters. 9000 Brita replacement filters on hand with an additional 10,000 readily available when needed. Total available= 19,000 MDHHS is currently coordinating with GCARD on publicity for distribution of the replacement filters.	DHHS and GCCARD will begin issuing the replacement filters the week of November 2 <sup>nd</sup> .	<b>Pending</b>
<b>Public Education Proper Filter Use</b>	When used improperly, the filters will exceed their capacity limit in a much shorter time frame thereby increasing need for filter replacement much sooner than expected. Develop NEW public education material about proper use of cartridge AND how to obtain filter replacement cartridges, targeted for release week of October 26 during lead awareness week.	MDHHS PIO coordinating with GCHD	<b>Estimated completion date: 10-30-15</b>
	Video created with Home Depot demonstrating replacement of the Brita replacement filter.	The video will be posted on the gov/flintwater website.	<b>Pending</b>
<b>Lead Testing Protocol:</b>	Draft protocol has been completed, undergoing final review. Protocol calls for testing: Priority groups- <ul style="list-style-type: none"> <li>Confirmatory venous testing for children who had venous testing (115 children)</li> </ul>	Protocol will be announced in a joint MDHHS/GCHD Press release.	<b>Pending</b>

TASK	STATUS	ACTION	DATE COMPLETED
	<ul style="list-style-type: none"> <li>Children in day care, Head Start</li> <li>children attending 3 schools (Freeman, Eisenhower, Brownell)</li> <li>Children residing in high risk zip codes (03, 04)</li> <li>All other students</li> </ul>		
<b>Lead Testing: 9/28/15-10/23/15</b>	CLPPP processed 580 tests from Flint zip codes since 9-28-15; 5 children were reported with elevated lead blood levels. 10-21-15 Funding for case management nurses will be disseminated to GCHD through new project: <i>Flint Water</i> , for \$425,000 through the Comprehensive Contract Egrams system, to fund the: Follow-up of Children Reported with Elevated Lead Levels: Case Management Services. GCHD has secured approvals for use of these funds and has begun procedures to place staff in appropriate positions to conduct the work.	MDHHS has arranged a contract with the GCHD to provide nurses for the follow-up.	Contract in Egrams as of 10-23-15
<b>Parent education</b>	Parent education material completed. Discuss dissemination of parent material through Flint schools.	Call with Flint school superintendent, GCHD, and MDHHS scheduled 10-26-15 to discuss dissemination process.	
	Schools require 6000+ information packets for distribution to all students. Print order sent to DTMB. Hardcopy will be distributed to GCHD for issuing to the schools, and to Headstart, daycare, and other agencies in Flint with children ages 0-5.	Expect hardcopy delivery by 11-2-15.	Dissemination week of 11-2-15
<b>Provider Education</b>	Provider Education material completed. Communication to providers will occur through GCHD and MDHHS networks (GCMS, GCARD, hospitals, etc).MDHHS will distribute through the Medicaid Health Plans.	Electronic distribution through various listservs is pending. (all parties).	Week of 11-2-15
<b>Community public education and testing event</b>	McLaren Health Plan in conjunction with GCHD hosting a public testing and awareness event on November 5 at the Burton GCHD site. McLaren will have providers on site to perform testing for their members; GCHD onsite to perform testing for all others. Event will also include Medicaid application assistance.  GCHD will be at a community event on Nov. 12, from 2 PM to 7 PM, to focus on testing for children 0-5. (Brownell and Holmes Schools)

**Flint Water Public Health Response: MDHHS Action Plan**

**Updated 10-28-15**

TASK	STATUS	ACTION	DATE COMPLETED
<b>Filter Distribution</b>	Residents may continue to obtain filters from GCCARD (both sites 9-4PM) and MDHHS clients can continue to obtain filters at the two MDHHS office locations or the GCCARD sites. As of October 22, DHHS/GCCARD has issued 9728 filters, 95 pitchers.	No action indicated, informational only.	NA
<b>Filter Replacement Distribution</b>	The procedure is in place for replacement cartridge distribution including an abbreviated application for residents to apply for and obtain cartridge replacement. Cartridge replacement will occur at same locations as filter sites. DHHS is also placing an order for 750 replacement filters for the 8-cup Zerowater filters. 9000 Brita replacement filters on hand with an additional 10,000 readily available when needed. Total available= 19,000 MDHHS is currently coordinating with GCARD on publicity for distribution of the replacement filters. <b><u>United Way will provide Pur Filter Replacements.</u></b>	DHHS and GCCARD will begin issuing the replacement filters the week of November 2 <sup>nd</sup> . <b><u>Press release planned Monday 11/2 re:pick up of replacement filters, videos to be posted on websites and you tube</u></b>	<b>Pending</b>
<b>Public Education Proper Filter Use</b>	When used improperly, the filters will exceed their capacity limit in a much shorter time frame thereby increasing need for filter replacement much sooner than expected. Develop NEW public education material about proper use of cartridge AND how to obtain filter replacement cartridges, targeted for release week of October 26 during lead awareness week.	Jen Eisner will work with Hilda McShane	<b>Completed</b>
	Video created with Home Depot demonstrating replacement of the Brita replacement filter.	The video will be posted on the gov/flintwater website.	<b>Completed</b>
<b>Lead Testing Protocol:</b>	Draft protocol has been completed, undergoing final review. Protocol calls for testing: Priority groups- <ul style="list-style-type: none"> <li>Confirmatory venous testing for children who had venous testing (115 children)</li> </ul>	Protocol has been cleared with Governor's Office.	<b>Completed 10-28</b>

TASK	STATUS	ACTION	DATE COMPLETED
	<ul style="list-style-type: none"> <li>Children in day care, Head Start</li> <li>children attending 3 schools (Freeman, Eisenhower, Brownell)</li> <li>Children residing in high risk zip codes (03, 04)</li> <li>All other students</li> </ul> <p><b><u>Protocol will be announced in a joint MDHHS/GCHD Press release.</u></b></p>		
<b>Blood Lead Testing: 9/28/15-10/23/15</b>	<p>CLPPP processed 580 tests from Flint zip codes since 9-28-15; 5 children were reported with elevated lead blood levels.</p> <p><b><u>There are currently 147 children that have been identified for follow-up.</u></b></p>	MDHHS has arranged a contract with the GCHD to provide nurses for the follow-up.	Contract completed in Egrams as of 10-23-15
	Cross reference list of children with elevated lead levels with filter distribution data to ensure household has a filter. (Peeler/Scott) So far only about 20% of the 147 children with EBL are known to have received a filter. GCHD will deliver filters to these homes as they are doing the case follow-up. GCHD will provide weekly updates.	Send list to Kris S (done)	in process
	<p>Would like to obtain the student list from the three schools and cross reference with our lead testing data to determine children tested/not tested</p> <p>A group will develop reporting metrics and system to track same: Linda Dykema, Wes Priem, Michele Bruneau,, Bob Scott <b><u>Group met to discuss metrics. plan to produce first detailed report for internal review the week of Nov. 9<sup>th</sup> A simplified version for external dissemination will be released after internal review.</u></b></p> <p>Linda is working on an analysis of blood lead tests done since 9-28-25. Epi will assist with this analysis</p>	Hertel to contact MDE	<p><b>Estimated completion date: 11-2-15</b></p> <p><b>November 9</b></p>
<b>Parent education</b>	<p>Parent education material completed.</p> <p>Discuss dissemination of parent material through Flint schools.</p>	Call with Flint school superintendent, GCHD, and MDHHS scheduled 10-26-15 to discuss dissemination process.	<b>Completed</b>
	Schools require 6000+ information packets for distribution to all students. Print order sent to DTMB.	Geralyn Lasher arranged for printing.	<b><u>10-30-15 printing completed and</u></b>

Updates in bold. Genesee hasn't been reporting total numbers of filters distributed this week so I took that out of the plan for now.

Highlights this week:

Genesee CHD Nurse training  
Suggested language for health threshold  
Testing event held at Brownell School held  
Follow-up with Molina regarding testing  
Congressional Call re: Ready to Feed Formula

Please let me know if you have any changes or additions before I send to Nick and all.

Nick, thank you for your phone call yesterday. These past couple months have been a blur, and I wanted to go back and see exactly when I first communicated with the state.

My first contact with MDDHS was with Karen Lishinski on Sept 8 (she had come to Hurley a year prior to give a grand rounds on lead). I called her and asked her about the lead concerns and she said that the state had looked at the blood lead data and that there was a possible increase, I asked her for the data over the phone, she said ok, but then I never heard back from her. I sent her the below email the day after.

And then my first communication with Bob Scott was on Sept 16 asking for the data again.

**Subject:** RE: Childhood lead poisoning- grand rounds talk

Hi Karen, Hope you are well. Thanks for speaking with me yesterday. Since we spoke, we have been able to run a report on all the blood lead levels in our peds clinic since before and after the water switch. Our research team is still analyzing the data, but it appears that there is an increase. I will share more once the analysis is complete.

Can you please share the MCIR data that you mentioned. That would be most helpful since the sample size is much greater. If there is someone else I should contact regarding the MCIR data request, please let me know.

Thanks! Mona

Hi Dr. Hanna-Attisha,

Dr. Reynolds told me that you were interested in having a speaker at a grand rounds talk. Could you give me a call and let me know when and what you would need in the way of specific information to be presented?

Looking forward to speaking with you!

## Flint Water Crisis: Timeline of Key Events

Prepared December 23, 2015

### 1 PRE JULY 2015

---

- Fall of 2014 – GCHD identified increase in cases of Legionella; MDHHS assisted GCHD in Epidemiologic analysis
- January 2015: MDHHS assisted with case interviews
- 6-4-15 Final Legionellosis outbreak report sent to Genesee County Health Department and Centers for Disease Control and Prevention
- 2/26/2015 - (2 calls) initiated by LeAnn Walters. Contacted Childhood Lead Poisoning Prevention Program-CLPPP (Karen Lishinski) – Ms. Walters expressed concern about Flint water quality and provider refusing to test her children; during second call she related that provider agreed to testing
- 3/4/2015 - (1 call) LeAnn Walters contacted CLPPP because child had elevated blood lead level; city officials wouldn't talk to her about her water; Karen provided EPA contact information

### 2 JULY 2015

---

- 7-22-15 Contact from Mark Johnson (ATSDR) to L. Dykema regarding Flint drinking water status; asking if Environmental Health was engaged
- 7-23-15 Director office inquiry forwarded to Population Health Administration for review/response
- 7-23-15 Division of Environmental Health (Dykema) contacted DEQ for update on drinking water testing/status. S. Busch relates that city in compliance with lead copper rule; one house with high lead level in water was an anomaly as house was connected to old water main but had since been corrected
- 7-24-15 Childhood Lead Poisoning Prevention Program (CLPPP) requests assistance from Epidemiology to assess magnitude of change in 2014 Blood Lead Levels (in children) for city of Flint
- Results indicate higher high percentage of Elevated Blood Lead Levels (EBLs) for summer 2014, followed seasonal trends and the levels showed decrease by October. Further analysis would be needed to establish causation.
- 7-28-15 Response sent to Director's office

### 3 AUGUST 2015

---

- 8-4-15 Meeting with Governor's office and Flint pastors. Flint pastors had information provided to Director in response to 7-23-15 inquiry

- 8-6-15 Informal request from Liane Shekter Smith (DEQ) to Kory Groetsch (MDHHS-DEH) after a meeting (unrelated to Flint situation) to assist with health education regarding lead in drinking water. MDHHS-DEH-supervisor made aware of request.
- 8-24-15 Dr. Mona Hanna Attisha contacts Genesee County Health Department for Blood Lead Level data/information
- 8-31-15 DEH staff meet to discuss communication plan for Flint/DEQ per request from DEQ

## 4 SEPTEMBER 2015

---

- 9-2-15 Marc Edwards contacts Bob Scott regarding Flint BLL data
- 9-8-15 Dr. Mona Hanna Attisha contacts CLPPP ( K. Lishinski) regarding BLL data
- 9-9-15 Email sent from Dr. Mona Hanna Attisha to CLPPP (K. Lishinski) requesting the BLL data
- 9-11-15 DEH/DEQ conference call regarding draft communication plan; overview.
- 9-15-15 B. Scott responds to Dr. Larry Reynolds, provides chart
- 9-16-15 Dr. Mona Hanna Attisha emailed B. Scott requesting the MCIR (BLL) data
- 9-16-15 Dr. Mona Hanna Attisha contacts Senator Ananich regarding data request
- 9-22-15 Senator Ananich spoke with Director Lyon regarding Dr. Mona Hanna Attisha's data request and Flint water situation
- 9-22-15 DEQ communications office contacted DHHS communications (A. Minicucci) about Healthy Homes Program
- 9-22-15 MDHHS receives copy of Dr. Mona Hanna Attisha's presentation to be presented at upcoming press event
- 9-23-15 MDHHS WIC office receives an inquiry about availability of bottled water through the WIC program. (Per federal regulations, clients can use SNAP benefits to purchase water, but water is not an allowable food item for purchase under the WIC program).
- 9-24-15 Hurley Press Event
- 9-24-15 Director requests response to Flint water situation
- 9-24-15 Bureau of Epidemiology begins analysis of Flint zip code data (Poisson Regression)
- 9-25-15 MDHHS responds to Detroit Free Press reporter inquiries
- 9/28/2015 Mark Valacak-Genesee County Health Department Health Officer- contacted M. Miller regarding timeframe for completion of MDHHS data analysis
- 9-29-15 Dr. Eden Wells contacts Dr. Mona Hanna Attisha regarding her study results
- 9-30-15 Briefing to Director comparing Lead Copper Rule Testing and Marc Edwards protocol.
- 9/23/15

## 5 OCTOBER 2015

---

- 10-2-15 Governor's press conference-MDHHS study results consistent with Hurley findings
- 10-2-15 State Budget Office approval to use carryover emergency funds and transfer of DEQ funds to purchase water filters
- 10-2-15 R.Travis and S. Bien received an inquiry about what Michigan is re: the Flint lead water situation from Jacqlyn Schneider, Deputy Director and Policy Director of US Senate Committee

on Agriculture, Nutrition, & Forestry. Ms Schneider inquired about the availability of Ready -to - Feed formula and asked if we are confident that the water filters that are being provided are sufficient to address the concerns about lead.

- 10-5-15 Filter distribution planning meeting held in Flint with local organizations
- 10-5-15 A teleconference was held with Rashmi Travis, Nancy Peeler, Dr. Eden Wells, Bob Scott, Corinne Miller, Sarah LyonCallo, Patti McKane (MDHSS), and Dr. Mona Hanna-Attisha, Jenny Latanz, and Dr. Richard Sandler (Hurley Lead Research Team) to discuss the nuances of the raw data that was sent to the Hurley Research Team.
- 10-5-15 S. Bien provided a response to the Jaclyn Schneider indicating the following: that we are in regular contact with the local health department, the majority of WIC clients were already using bottled water to reconstitute infant formula, that a mass distribution (about 4000 filters) of filters was underway, and lead testing was being done adjunct with WIC clinics, and the local health department had additional lead testing opportunities scheduled.
- 10-7-15 Flint Mayor's Water Technical Advisory Committee meeting (E. Wells, L. Dykema); recommends switch back to Detroit Water Authority
- 10-8-15 GCHD issues Public Health Advisory
- 10-12-15 Daily calls with GCHD begin. Topics Include:
  - Distribution and tracking of filters
  - Development and implementation of case management in Flint by GCHD
  - Development and implementation of lead environmental inspection contract
  - Development and distribution of educational materials – to providers and parents
  - Testing events (blood lead)
  - Testing events (water mainly / DEQ activity in the schools)
  - Data analysis (internal meeting)
- 10-13-15 MDEQ/MDHHS/toxic steering group committee meeting discusses use of the IEUBK modeling for the Flint water situation; requested a subcommittee to identify the exposure assumptions that would be developed for schools and homes
- 10-13-15 CLPPP provided Lead Week Toolkit to DEH
- 10-13-15 Began development of the Lead & Your Body infographic
- 10-13-15 MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- 10-16-15 First of weekly meetings with city of Flint meeting DEQ HHS LARA GCHD (Jim Henry) at the Mayor's office
- 10-16-15 MDHHS (L. Dykema) participates in meeting with superintendent of Flint schools
- 10-19-15 Supplemental funding legislation passed
- 10-20-15 Daily calls to GCHD changed biweekly (ongoing)
- 10-21-15 Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding Blood lead testing protocol and case management follow up
- 10-27-15 ETC contracted to provide EBL investigation services
- 10-27-15 Briefing to Director regarding IEUBK modeling for school drinking water screening value.
- 10-27-15 S.Bien received an email from USDA regional representative, Bruce Hillman, indicating that our Congressional Representatives had sent a letter to Tom Vilsack, Secretary of USDA

inquiring about community response to address immediate and long-term needs. Regional USDA representative indicated he would be in contact with MDHHS WIC office to receive an update. MDHHS WIC office responded that we continue to work with the local health department to assure that clients are getting access to filters and bottled water to mix their infant formula. WIC also indicated that at that time there had not been any requests from WIC clients for Ready to Feed Formula.

- 10-28-15 DEH requested by Eden Wells to help clarify CLPPP report for the Director
- 10-30-15 Case management (nursing) contract with Genesee County Health Department begin
- 10-30-15 (approx.) 8500 parent information packets distributed to GCHD

## 6 NOVEMBER 2015

---

- 11-3-15 Director's office received a letter from Tim English, Midwest Regional Administrator for USDA
- 11-5-15 Response to Tim English's inquiry drafted and sent to Director Lyon's office. MDHHS indicates continued monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- 11-6-15 11/6/15 Bruce Hillman, Regional Representation from USDA, notified S. Bien that they had received questions from Katie Bergh from Senator Stabenow's office regarding availability of Ready to Feed, our communication plan, how many clients had requested Ready to Feed.
- 11-6-15 Additional 3500 parent packets distributed to GCHD
- 11-9-15 Transition of 2.0 CLPPP staff to DEH
- 11-12-15 Phone conference with Karla Ruest, Rashmi Travis (MDHHS), Stan Bien (MDHSS-WIC), Kristin Hanulcik (MDHSS- WIC), Bruce Hillman (USDA), Anne Bartholomew (USDA), Katie Bergh (Senator Stabenow's office), and Jaclyn Schneider (Deputy Staff Director US Senate Committee on Agriculture, Nutrition, and Forestry) in regards to the legislative inquiries. Information was provided on how MDHHS is working with the local health department to monitor requests for Ready to Feed formula, continuing to work with the local health department to assure filters and bottled water are provided to clients, and providing educational materials on Ready to Feed formula to WIC clients. To date, only one WIC client had requested Ready to Feed formula.
- 11-13-15 Call with ATSDR, GCHD and MDHS to discuss outreach material
- 11/16/15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with the local health department to share with providers in the community. This same information was provided to Congressional delegates on 11-12-15 phone conference.
- 11-18-15 DHHS Meets with Governor's Flint Water Task Force
- 11-24-15 DEH Project Management Structure implemented
  - Daily Sit-Reps begin
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- 11-24-15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

## 7 DECEMBER 2015

---

- 12-3-15 MDHHS BLL Summary Report released
- 12-11-15 MDHHS BLL Summary Report released
- 12-14-15 Meeting with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source

## Flint Water: Summary of MDHHS Actions (as of 12-30-15)

### October 2015

- MDHHS provides information for Flint Water website, including the following documents: Parent Handbook: Is Your Child Safe From Lead Poisoning, Blood Lead Level (BLL) Quick Reference for Primary Care Providers, Lead Screening & Testing for Safe, Healthy Michigan Kids, and finally, Pregnant and Nursing Mothers: What You Need to Know
- MDHHS announces water filters will be available to the public on Oct. 6, extended hours for filter distribution.
- Regular calls with Genesee County Health Department. Topics include distribution and tracking of filters, case management, lead environmental inspections, development and distribution of educational materials, testing events (blood lead), testing events, data analysis.
- MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- Supplemental funding legislation passed
- Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding blood lead testing protocol and case management follow up
- ETC contracted to provide EBL investigation services
- Case management (nursing) contract with Genesee County Health Department begins
- 8500 parent information packets distributed to GCHD

### November 2015

- MDHHS monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- Additional 3500 parent packets distributed to GCHD
- Call with ATSDR, GCHD and MDHHS to discuss improving our outreach material
- DHHS Met with Governor's Flint Water Task Force
- Project Management Structure implemented
  - Daily Situation Reports-Reps begin being compiled and distributed to MDHHS staff
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

### December 2015

- 12-3-15 MDHHS BLL Summary Report #1 released and is posted to Flint water website
- 12-11-15 MDHHS BLL Summary Report #2 released and is posted to Flint water website
- 12-23-15 MDHHS BLL Summary Report #3 noting change in method, report posted to Flint Water website
- Met with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source
- MSA issues L 15-73 – Blood Lead Guidelines to Address the City of Flint Residents' Potential Exposure to Lead. This letter was sent to Practitioners, Clinics, Laboratories and Maternal Infant Health Program (MIHP) Providers in the City of Flint.

## **Michigan Department of Health and Human Services**

Steps Taken Since October 1, 2015

### **Water Filters**

- The state began distributing free waters to Flint residents in early October. Free water filters and replacement cartridges are currently available to all Flint at multiple locations.
  - The state has distributed 11,415 free water filters and 235 pitchers as of Dec. 31.
  - Free replacement cartridges are also available to residents – 1,475 have been distributed as of Dec. 31.
  - Water filters are available at four locations Monday – Friday from 9 a.m. to 4 p.m.
    - Michigan Department of Health and Human Services offices  
125 E. Union St. and 4809 Clio Road
    - Genesee County Community Action Resource Department offices  
2727 Lippincott and 601 N. Saginaw
- In addition to the water filters purchased and distributed by the Michigan Department of Health and Human Services, many local organizations and community partners including the United Way have held evening and weekend events to distribute water filters to Flint residents.

### **Enhanced Blood Lead Level Testing**

- The Michigan Department of Health and Human Services is working closely with local partners to ensure that all children, especially those younger than six years of age, are being tested for elevated blood lead levels.
- The Michigan Medicaid and WIC programs require testing for children at ages one and two. To promote and increase testing in the community, MDHHS issued a Health Alert Network notification for local Flint providers recommending blood lead testing for all children younger than six years of age who has not previously been tested.
- MDHHS is working closely with the local primary care provider community and WIC clinics to emphasize the importance of blood lead level screening for children.
- Many children in Flint have health benefits through the Medicaid program. MDHHS is coordinating with the Michigan Medicaid Health Plans to promote lead testing efforts.
- Additionally, a technical workgroup comprised of Medicaid data and public health surveillance experts are meeting to develop Medicaid specific EBLL testing goals.
- MDHHS Chief Medical Executive Dr. Eden Wells is in regular communication with Dr. Mona Hanna-Attisha and other local and national experts regarding the Flint Water Crisis.

### **Blood Lead Level Testing Reports**

- The Michigan Department of Health and Human Services has updated its data surveillance methods for blood lead level testing to ensure the most up-to-date, accurate information is being reviewed.

- Results are made available through summary reports on the [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater) website. The report shows how many tests have been completed and how many people tested had elevated blood lead levels.
- On Dec. 3, 2015, the first MDHHS BLL Summary Report was released and posted to Flint water website.
- On Dec. 11, MDHHS issued the second BLL Summary Report and posted to Flint water website.
- On Dec. 23, MDHHS the third BLL Summary Report was issued, noting change in method.
- The reports include data from the city of Flint, Genesee County, and the State levels.
- Between Oct. 1 and Dec. 18, 2,182 children and adults in Flint had their blood lead levels tested.
- Of those 2,182 individuals, 23 children 5 years of age or younger had a test greater than or equal to 5 micrograms per deciliter. Seven children ages 6 to 17 had an elevated blood lead level test, and tests for 13 adults exceeded the federal action level.

### **Case Management**

- The Michigan Department of Health and Human Services is partnering with the Genesee County Health Department to ensure families are being offered case management support.
- Additional state funds were allocated to the Genesee County Health Department to supplement their case management efforts. These state dollars paid for two and half full-time employees – nurses who are trained to provide education and assistance to families of Flint children with elevated blood lead levels – to work directly in the community.
- Through Dec. 18, a total of 192 contacts have been attempted to start case management.
- Of those, 115 were reached and offered case management.
- 26 children are currently receiving case management.
- MDHHS holds weekly status calls with the GCHD Case Management staff

### **Environmental EBL Investigations**

- Another resource being offered to families where an elevated blood lead level has been detected is environmental investigations.
- Environmental investigations help identify potential lead exposures which could be from water, paint, soil, plumbing and other sources.
- 12 EBL investigations have been completed and five EBL investigation reports have been received. Of those, the following exposures have been found:
  - Four homes with lead dust hazards
  - Three homes with lead in soil hazards
  - Five homes with lead-based paint hazards
  - Two homes with lead detected in tap water

## Communications and Education

- MDHHS and DEQ coordinated with the governor's office to launch the [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater) website.
- In October, MDHHS, in partnership with the Genesee County Health Department, developed and distributed 8,500 packets with educational materials for parents and families in Flint. An additional 3,500 were distributed to GCHD in November.
- Education materials were distributed to all children in Flint schools and discussed the importance of blood lead level testing and the effects of lead exposure. The materials also outlined who should be tested and how to get children tested.
- **FAQs: Lead in Flint Water** – this document details when one should use filtered water versus unfiltered water. Available at: [http://www.michigan.gov/documents/deq/2015-10-21\\_-\\_Lead\\_-\\_Flint\\_Water\\_FINAL\\_504265\\_7.pdf?20151207171149](http://www.michigan.gov/documents/deq/2015-10-21_-_Lead_-_Flint_Water_FINAL_504265_7.pdf?20151207171149)
- **FAQs: Lead and Your Body** – this document explains the potential health effects of lead poisoning through all life stages, and includes information about exposure pathways of lead from water. Available at: [http://www.michigan.gov/documents/deq/2015-10-29\\_-\\_Lead\\_and\\_your\\_Body\\_-\\_Flint\\_-\\_no\\_background\\_507727\\_7.pdf?20151207171149](http://www.michigan.gov/documents/deq/2015-10-29_-_Lead_and_your_Body_-_Flint_-_no_background_507727_7.pdf?20151207171149)
- **Adding Phosphates to Flint Water** – this document explains the process by which adding extra phosphates can potentially reduce the lead levels in Flint homes' water and the health implications of the phosphates at the levels they're being added. Approved for publication by GCHD, MDHHS approval and posting pending.

## WIC and Medicaid

- MDHHS monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.
- Met with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source
- MSA issues L 15-73 – Blood Lead Guidelines to Address the City of Flint Residents' Potential Exposure to Lead. This letter was sent to Practitioners, Clinics, Laboratories and Maternal Infant Health Program (MIHP) Providers in the City of Flint.

**Subject:** EBL Data---clarification

Geralyn--sorry, yesterday I was caught without my file--a slight correction (hope it is not too late) actual talking point from the first press conference about our data---note that below were doing a model:

"Blood lead level rates among children under six years of age in the high risk Zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water ( $p < 0.0001$ ). After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County ( $p < 0.0001$ ).

Thus, compared to rates during 2010-2013, the rates after the switch to Flint River water in the high risk Zip codes increased 18 percent, although this difference did not reach statistical significance.

#### Other Zip codes in Flint

Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water ( $p < 0.0001$ ). The magnitude of the elevated rate remained roughly the same during the period after the water source switch."

However, when we look at percentages by zip and by quarter, note that there are ways you can see doubling in certain zips, but there is a seasonal quality to the data so we have never said "rates doubled" in a certain area---but the Hurley folks have been.

I like that idea- and I don't foresee an issue with such an agreement. I hope you understand that this is just one form of a surveillance report, and there can be others- but we really wanted to get the testing data started.

Shall we discuss with State Epidemiologist-/could set up call even tomorrow- will share your request with Nick right now

Do you think it would be possible to create a data sharing agreement so that we could do the real-time geocoding of kids with EBL's? So whenever a EBL comes in for Genesee county, my team can map it, trend it, etc? You guys may already be doing this, but we easily have the GIS support. This real time mapping will further help us identify hot spots for resource delivery and remediation.

You are correct, Larry, that the MDHHS data is pulled out of the Data Warehouse by Flint zip.

My understanding is that the other data set is by 9 Flint wards so only Flint homes are in the data set vs including those with Flint mailing addresses with zip codes. Please correct me if needed.

Hi Dr. Reynolds,

I just got done with an email with Mona---

This is a general public report that is high level--not a technical report, and was not meant to represent a technical report. This is general information--of course our surveillance program is tracking by zip, Medicaid, locality, etc.

We can discuss further what type of reporting may be useful to a technical audience---as long as not identifiable (some zips have to be suppressed) I don't see why this can't be done (probably not every two weeks like this public one would be)

Warm Regards,

Eden

**Subject:** Fwd: FOR IMMEDIATE RELEASE: MDHHS releases latest data outlining blood lead levels in Flint; Follow-up care, case management resources continue for families

This is a good start but maybe lacking context . Would GIS software identify clusters ? I am disappointed to see, at this moment , that Dr. Edward's study and Dr. Mona's study which have more granular reporting are given no credence. Is there a reason ?

**CONTACT:** Jennifer Eisner, [\(517\) 241-2112](tel:517.241.2112)

**MDHHS releases latest data outlining blood lead levels in Flint**

*Follow-up care, case management resources continue for families*

LANSING, Mich. – Preliminary data indicates that 30 of 1,361 adults and children tested in Flint since October 1 had elevated blood lead levels, according to a report issued today by the Michigan Department of Health and Human Services.

This marks the first summary report on lead testing called for in the state’s action plan related to health concerns about Flint’s water infrastructure.

“Our goal is to help families reduce their exposure to lead sources,” said Dr. Eden Wells, MDHHS chief medical executive. “We have made progress in testing and identifying those with elevated blood lead levels, and the department will continue to work closely with the Genesee County Health Department to reach these families. We will remain diligent in our ongoing outreach and education efforts.”

Information comes from tests administered citywide to 1,361 children and adults since October 1. Tests showed that 21 of 969 children age 17 or younger and 9 of 392 adults over the age 18 were identified with elevated blood lead levels.

The report covers test results reported to MDHHS since the state action plan was put in place Oct. 2. It includes the number of tests and number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests that have been reported to MDHHS since the beginning of October. People who have had multiple tests are counted only once. Five micrograms per deciliter is the level that the Centers for Disease Control and Prevention considers elevated and triggers health care professional follow up with families.

The full report is posted online at [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater) and will be updated as more data becomes available.

When reviewing historical trend data, the risk of lead exposure is highest during the third quarter of each year – July through September. Seasonal variation is the result of a number of factors including increased exposure to lead in dust and soil in the summer months.

In the third quarter of 2010, 8.3 percent of Flint children 6 and under showed elevated blood lead levels. The figure gradually decreased to 4.1 percent in the third quarter of 2013. During the same months in 2014, the figure increased to 7.5 percent and decreased to 6.4 percent in the third quarter of 2015.

Last month, MDHHS collaborated with the county health department and local partners to distribute educational resources and informational letters to Flint parents regarding lead testing. The state is providing

funding for GCHD nurses to work with families when an elevated blood lead level has been detected. During these follow-up visits, nurses coordinate with environmental health investigators to meet with families in their homes to identify lead exposures, address questions and provide water filters. People can be exposed to lead from paint, soil, plumbing and other sources.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations, including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its [YouTube channel](#). For updates, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

## Flint Water Crisis: Timeline of Key Events

Prepared December 23, 2015

### 1 PRE JULY 2015

- Fall of 2014 – ~~GCHD~~ Genesee County Health Department (GCHD) identified increase in cases of Legionella; MDHHS assisted GCHD in Epidemiologic analysis
- January 2015: MDHHS assisted with case interviews
- ~~6-4-15~~ Final Legionellosis outbreak report sent to Genesee County Health Department and discussed with Centers for Disease Control and Prevention. There were 45 cases laboratory confirmed cases of legionella. Healthcare-associated Legionella was suspected for a subset of cases. Results demonstrated that over half (27/45) of the cases had a healthcare facility exposure in the two weeks prior to their illness onset. In response, the healthcare facility has implemented multiple environmental and procedural measures to alleviate the situation.
  - The source of water at the primary residence was evaluated for all cases. Twenty-one of 45 (47%) cases occurred in people whose residence received City of Flint water. Of the 18 persons that did not report healthcare visits, 8 (44%) were exposed to Flint water at their home.
  - Ten cases had no exposure to a Flint hospital in the 2 weeks prior to illness nor were their homes on the Flint water system.
  - Other possible exposures were evaluated and no other known community exposures were identified.
  - Enhanced surveillance has continued for the remainder of 2015.
- ~~2-26-2015~~ - (2 calls) initiated by LeAnn Walters. Contacted Childhood Lead Poisoning Prevention Program-CLPPP (Karen Lishinski) – Ms. Walters expressed concern about Flint water quality and provider refusing to test her children; during second call she related that provider agreed to testing
- ~~3-4-2015~~ - (1 call) LeAnn Walters contacted CLPPP because child had elevated blood lead level; city officials wouldn't talk to her about her water; Karen provided EPA contact information

Formatted

### 2 JULY 2015

- 7-22-15 Contact from Mark Johnson U.S. Agency for Toxic Substances and Disease Registry (ATSDR) to L. Dykema regarding Flint drinking water status; asking if Environmental Health was engaged
- 7-23-15 Director office inquiry forwarded to Population Health Administration for review/response
- 7-23-15 Division of Environmental Health (Dykema) contacted DEQ for update on drinking water testing/status. S. Busch relates that city in compliance with lead copper rule; one house with

high lead level in water was an anomaly as house was connected to old water main but had since been corrected. This home was the residence of LeAnne Walters from 3-4-15 calls.

- 7-24-15 Childhood Lead Poisoning Prevention Program (CLPPP) requests assistance from Epidemiology to assess magnitude of change in 2014 Blood Lead Levels (in children) for city of Flint
-  Results indicate higher high percentage of Elevated Blood Lead Levels (EBLLs) for summer 2014, followed seasonal trends and the levels showed decrease by October. Further analysis would be needed to establish causation.
- 7-28-15 Response sent to Director's office

Formatted

### 3 AUGUST 2015

- 8-4-15 Meeting with Governor's office and Flint pastors. Flint pastors had information provided to Director in response to 7-23-15 inquiry
- 8-6-15 Informal request from Liane Shekter Smith (DEQ) to Kory Groetsch (MDHHS-Division of Environmental Health (DEH) after a meeting (unrelated to Flint situation) to assist with health education regarding lead in drinking water. MDHHS-DEH-supervisor made aware of request.
- 8-24-15 Dr. Mona Hanna Attisha contacts Genesee County Health Department for Blood Lead Level data/information
- 8-31-15 DEH staff meet to discuss communication plan for Flint/DEQ per request from DEQ

### 4 SEPTEMBER 2015

- 9-2-15 Marc Edwards contacts Bob Scott regarding Flint BLL data
- 9-8-15 Dr. Mona Hanna Attisha contacts CLPPP ( K. Lishinski) regarding BLL data
- 9-9-15 Email sent from Dr. Mona Hanna Attisha to CLPPP (K. Lishinski) requesting the BLL data
- 9-11-15 DEH/DEQ conference call regarding draft communication plan; overview.
- 9-15-15 B. Scott responds to Dr. Larry Reynolds, provides chart
- 9-16-15 Dr. Mona Hanna Attisha emailed B. Scott requesting the MCIR (BLL) data
- 9-16-15 Dr. Mona Hanna Attisha contacts Senator Ananich regarding data request
- 9-22-15 Senator Ananich spoke with Director Lyon regarding Dr. Mona Hanna Attisha's data request and Flint water situation
- 9-22-15 DEQ communications office contacted DHHS communications (A. Minicucci) about Healthy Homes Program
- 9-22-15 MDHHS receives copy of Dr. Mona Hanna Attisha's presentation to be presented at upcoming press event
- 9-23-15 MDHHS WIC office receives an inquiry about availability of bottled water through the WIC program. (Per federal regulations, clients can use SNAP benefits to purchase water, but water is not an allowable food item for purchase under the WIC program).
- 9-24-15 Hurley Press Event
- 9-24-15 Director requests response to Flint water situation

- 9-24-15 Bureau of Epidemiology begins analysis of Flint zip code data ~~{utilizing the Poisson Regression for statistical analysis}~~
- 9-25-15 MDHHS responds to Detroit Free Press reporter inquiries
- 9/28/2015 Mark Valacak-Genesee County Health Department Health Officer- contacted M. Miller regarding timeframe for completion of MDHHS data analysis
- 9-29-15 Dr. Eden Wells contacts Dr. Mona Hanna Attisha regarding her study results
- 9-30-15 Briefing to Director comparing Lead Copper Rule Testing and Marc Edwards protocol.
- ~~9/23/15~~

## 5 OCTOBER 2015

- 10-2-15 Governor's press conference-MDHHS study results consistent with Hurley findings
- 10-2-15 State Budget Office approval to use carryover emergency funds and transfer of DEQ funds to purchase water filters
- 10-2-15 R.Travis and S. Bien received an inquiry about what Michigan is ~~re-doing~~ regarding the Flint lead water situation from Jacquelyn Schneider, Deputy Director and Policy Director of US Senate Committee on Agriculture, Nutrition, & Forestry. Ms. Schneider inquired about the availability of Ready-to-Feed formula and asked if we are confident that the water filters that are being provided are sufficient to address the concerns about lead.
- 10-5-15 Filter distribution planning meeting held in Flint with local organizations
- 10-5-15 A teleconference was held with Rashmi Travis, Nancy Peeler, Dr. Eden Wells, Bob Scott, Corinne Miller, Sarah LyonCallo, Patti McKane (MDHSS), and Dr. Mona Hanna-Attisha, Jenny Latanz, and Dr. Richard Sandler (Hurley Lead Research Team) to discuss the nuances of the raw data that was sent on 10-2-15 to the Hurley Research Team.
- 10-5-15 S. Bien provided a response to ~~the~~ Jacquelyn Schneider indicating the following: that we are in regular contact with the local health department, the majority of WIC clients were already using bottled water to reconstitute infant formula, that a mass distribution (about 4000 filters) of filters was underway, and lead testing was being done adjunct with WIC clinics, and the local health department had additional lead testing opportunities scheduled.
- 10-7-15 Flint Mayor's Water Technical Advisory Committee meeting (E. Wells, L. Dykema); recommends switch back to Detroit Water Authority
- 10-8-15 GCHD issues Public Health Advisory
- 10-12-15 Daily calls with GCHD begin. Topics Include:
  - Distribution and tracking of filters
  - Development and implementation of case management in Flint by GCHD
  - Development and implementation of lead environmental inspection contract
  - Development and distribution of educational materials – to providers and parents
  - Testing events (blood lead)
  - Testing events (water mainly / DEQ activity in the schools)
  - Data analysis (internal meeting)
- 10-13-15 MDEQ/MDHHS/toxic steering group committee meeting discusses use of the Integrated Exposure Update Biokinetic (IEUBK) model for lead in children ~~modeling for the Flint~~

water situation; requested a subcommittee to identify the exposure assumptions that would be developed for schools and homes

- 10-13-15 CLPPP provided Lead Week Toolkit to DEH
- 10-13-15 Began development of the Lead & Your Body infographic
- 10-13-15 MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- 10-16-15 First of weekly meetings with city of Flint meeting DEQ HHS LARA GCHD (Jim Henry) at the Mayor's office
- 10-16-15 MDHHS (L. Dykema) participates in meeting with superintendent of Flint schools
- 10-19-15 Supplemental funding legislation passed
- 10-20-15 Daily calls to GCHD changed biweekly (ongoing)
- 10-21-15 Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding Blood lead testing protocol and case management follow up
- 10-27-15 ETC contracted to provide EBL investigation services
- 10-27-15 Briefing to Director regarding IEUBK modeling for school drinking water screening value.
- 10-27-15 S.Bien received an email from USDA regional representative, Bruce Hillman, indicating that our Congressional Representatives had sent a letter to Tom Vilsack, Secretary of USDA inquiring about community response to address immediate and long-term needs. Regional USDA representative indicated he would be in contact with MDHHS WIC office to receive an update. MDHHS WIC office responded that we continue to work with the local health department to assure that clients are getting access to filters and bottled water to mix their infant formula. WIC also indicated that at that time there had not been any requests from WIC clients for Ready to Feed Formula.
- 10-28-15 DEH requested by Eden Wells to help clarify CLPPP report for the Director
- 10-30-15 Case management (nursing) contract with Genesee County Health Department begin
- 10-30-15 (approx.) 8500 parent information packets distributed to GCHD

## 6 NOVEMBER 2015

---

- 11-3-15 Director's office received a letter from Tim English, Midwest Regional Administrator for USDA
- 11-5-15 Response to Tim English's inquiry drafted and sent to Director Lyon's office. MDHHS indicates continued monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- ~~11-6-15~~ 11/6/15 Bruce Hillman, Regional Representation from USDA, notified S. Bien that they had received questions from Katie Bergh from Senator Stabenow's office regarding availability of Ready to Feed, our communication plan, how many clients had requested Ready to Feed.
- 11-6-15 Additional 3500 parent packets distributed to GCHD
- 11-9-15 Transition of 2.0 CLPPP staff to DEH
- 11-12-15 Phone conference with Karla Ruest, Rashmi Travis (MDHHS), Stan Bien (MDHSS-WIC), Kristin Hanulcik (MDHSS- WIC), Bruce Hillman (USDA), Anne Bartholomew (USDA), Katie Bergh

(Senator Stabenow's office), and Jaclyn Schneider (Deputy Staff Director US Senate Committee on Agriculture, Nutrition, and Forestry) in regards to the legislative inquiries. Information was provided on how MDHHS is working with the local health department to monitor requests for Ready to Feed formula, continuing to work with the local health department to assure filters and bottled water are provided to clients, and providing educational materials on Ready to Feed formula to WIC clients. To date, only one WIC client had requested Ready to Feed formula.

- 11-13-15 Call with ATSDR, GCHD and MDHS to discuss outreach material
- 11/16/15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with the local health department to share with providers in the community. This same information was provided to Congressional delegates on 11-12-15 phone conference.
- 11-18-15 DHHS Meets with Governor's Flint Water Task Force
- 11-24-15 DEH Project Management Structure implemented
  - Daily ~~Sit~~Situation Reports-Reps begin being compiled and distributed to MDHHS staff
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- 11-24-15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

## 7 DECEMBER 2015

---

- 12-3-15 MDHHS BLL Summary Report released
- 12-11-15 MDHHS BLL Summary Report released
- 12-14-15 Meeting with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source

# Michigan Department of Health and Human Services

## Flint Water: Timeline of Key Events

### 1 PRE JULY 2015

---

- Fall 2014 – Genesee County Health Department (GCHD) identified increase in cases of Legionella; MDHHS assisted GCHD in Epidemiologic analysis
- January 2015: MDHHS assisted with case interviews
- 6-4-15 Final Legionellosis outbreak report sent to Genesee County Health Department and discussed with Centers for Disease Control and Prevention. There were 45 cases laboratory confirmed cases of legionella. Healthcare-associated Legionella was suspected for a subset of cases. Results demonstrated that over half (27/45) of the cases had a healthcare facility exposure in the two weeks prior to their illness onset. In response, the healthcare facility has implemented multiple environmental and procedural measures to alleviate the situation.
  - The source of water at the primary residence was evaluated for all cases. Twenty-one of 45 (47%) cases occurred in people whose residence received City of Flint water. Of the 18 persons that did not report healthcare visits, 8 (44%) were exposed to Flint water at their home.
  - Ten cases had no exposure to a Flint hospital in the 2 weeks prior to illness nor were their homes on the Flint water system.
  - Other possible exposures were evaluated and no other known community exposures were identified.
  - Enhanced surveillance has continued for the remainder of 2015.
- 2-26-2015 - (2 calls) initiated by LeAnn Walters. Contacted Childhood Lead Poisoning Prevention Program-CLPPP (Karen Lishinski) – Ms. Walters expressed concern about Flint water quality and provider refusing to test her children; during second call she related that provider agreed to testing
- 3-4-2015 - (1 call) LeAnn Walters contacted CLPPP because child had elevated blood lead level; city officials wouldn't talk to her about her water; Karen provided EPA contact information

### 2 JULY 2015

---

- 7-22-15 Contact from Mark Johnson U.S. Agency for Toxic Substances and Disease Registry (ATSDR) to L. Dykema regarding Flint drinking water status; asking if Environmental Health was engaged
- 7-23-15 Director office inquiry forwarded to Population Health Administration for review/response
- 7-23-15 Division of Environmental Health (Dykema) contacted DEQ for update on drinking water testing/status. S. Busch relates that city in compliance with lead copper rule; one house with high lead level in water was an anomaly as house was connected to old water main but had since been corrected. This home was the residence of LeAnne Walters from 3-4-15 calls.

- 7-24-15 Childhood Lead Poisoning Prevention Program (CLPPP) requests assistance from Epidemiology to assess magnitude of change in 2014 Blood Lead Levels (in children) for city of Flint
  - Results indicate percentage of Elevated Blood Lead Levels (EBLs) for summer 2014, followed seasonal trends and the levels showed decrease by October. Further analysis would be needed to establish causation.
- 7-28-15 Response sent to Director's office

### 3 AUGUST 2015

---

- 8-4-15 Meeting with Governor's office and Flint pastors. Flint pastors had information provided to Director in response to 7-23-15 inquiry
- 8-6-15 Informal request from Liane Shekter Smith (DEQ) to Kory Groetsch MDHHS-Division of Environmental Health (DEH) after a meeting (unrelated to Flint situation) to assist with health education regarding lead in drinking water. MDHHS-DEH-supervisor made aware of request.
- 8-24-15 Dr. Mona Hanna Attisha contacts Genesee County Health Department for Blood Lead Level data/information
- 8-31-15 DEH staff meet to discuss communication plan for Flint/DEQ per request from DEQ

### 4 SEPTEMBER 2015

---

- 9-2-15 Marc Edwards contacts Bob Scott regarding Flint BLL data
- 9-8-15 Dr. Mona Hanna Attisha contacts CLPPP ( K. Lishinski) regarding BLL data
- 9-9-15 Email sent from Dr. Mona Hanna Attisha to CLPPP (K. Lishinski) requesting the BLL data
- 9-11-15 DEH/DEQ conference call regarding draft communication plan; overview.
- 9-15-15 B. Scott responds to Dr. Larry Reynolds, provides chart
- 9-16-15 Dr. Mona Hanna Attisha emailed B. Scott requesting the MCIR (BLL) data
- 9-16-15 Dr. Mona Hanna Attisha contacts Senator Ananich regarding data request
- 9-22-15 Senator Ananich spoke with Director Lyon regarding Dr. Mona Hanna Attisha's data request and Flint water situation
- 9-22-15 DEQ communications office contacted DHHS communications (A. Minicucci) about Healthy Homes Program
- 9-22-15 MDHHS receives copy of Dr. Mona Hanna Attisha's presentation to be presented at upcoming press event
- 9-23-15 MDHHS WIC office receives an inquiry about availability of bottled water through the WIC program. (Per federal regulations, clients can use SNAP benefits to purchase water, but water is not an allowable food item for purchase under the WIC program).
- 9-24-15 Hurley Press Event
- 9-24-15 Director requests response to Flint water situation
- 9-24-15 Bureau of Epidemiology begins analysis of Flint zip code data utilizing the Poisson Regression for statistical analysis
- 9-25-15 MDHHS responds to Detroit Free Press reporter inquiries

- 9/28/2015 Mark Valacak-Genesee County Health Department Health Officer- contacted M. Miller regarding timeframe for completion of MDHHS data analysis
- 9-29-15 Dr. Eden Wells contacts Dr. Mona Hanna Attisha regarding her study results
- 9-30-15 Briefing to Director comparing Lead Copper Rule Testing and Marc Edwards protocol.

## 5 OCTOBER 2015

---

- 10-2-15 Governor's press conference-MDHHS study results consistent with Hurley findings
- 10-2-15 State Budget Office approval to use carryover emergency funds and transfer of DEQ funds to purchase water filters
- 10-2-15 R.Travis and S. Bien received an inquiry about what Michigan is doing regarding the Flint lead water situation from Jacquelyn Schneider, Deputy Director and Policy Director of US Senate Committee on Agriculture, Nutrition, & Forestry. Ms. Schneider inquired about the availability of Ready -to -Feed formula and asked if we are confident that the water filters that are being provided are sufficient to address the concerns about lead.
- 10-5-15 Filter distribution planning meeting held in Flint with local organizations
- 10-5-15 A teleconference was held with Rashmi Travis, Nancy Peeler, Dr. Eden Wells, Bob Scott, Corinne Miller, Sarah LyonCallo, Patti McKane (MDHSS), and Dr. Mona Hanna-Attisha, Jenny Latanz, and Dr. Richard Sandler (Hurley Lead Research Team) to discuss the nuances of the raw data that was sent on 10-2-15 to the Hurley Research Team.
- 10-5-15 S. Bien provided a response to Jaclyn Schneider indicating the following: that we are in regular contact with the local health department, the majority of WIC clients were already using bottled water to reconstitute infant formula, that a mass distribution (about 4000 filters) of filters was underway, and lead testing was being done adjunct with WIC clinics, and the local health department had additional lead testing opportunities scheduled.
- 10-7-15 Flint Mayor's Water Technical Advisory Committee meeting (E. Wells, L. Dykema); recommends switch back to Detroit Water Authority
- 10-8-15 GCHD issues Public Health Advisory
- 10-12-15 Daily calls with GCHD begin. Topics Include:
  - Distribution and tracking of filters
  - Development and implementation of case management in Flint by GCHD
  - Development and implementation of lead environmental inspection contract
  - Development and distribution of educational materials – to providers and parents
  - Testing events (blood lead)
  - Testing events (water mainly / DEQ activity in the schools)
  - Data analysis (internal meeting)
- 10-13-15 MDEQ/MDHHS/toxic steering group committee meeting discusses use of the Integrated Exposure Update Biokinetic (IEUBK) model for lead in children for the Flint water situation; requested a subcommittee to identify the exposure assumptions that would be developed for schools and homes
- 10-13-15 CLPPP provided Lead Week Toolkit to DEH
- 10-13-15 Began development of the Lead & Your Body infographic

- 10-13-15 MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- 10-16-15 First of weekly meetings with city of Flint meeting DEQ HHS LARA GCHD (Jim Henry) at the Mayor's office
- 10-16-15 MDHHS (L. Dykema) participates in meeting with superintendent of Flint schools
- 10-19-15 Supplemental funding legislation passed
- 10-20-15 Daily calls to GCHD changed biweekly (ongoing)
- 10-21-15 Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding Blood lead testing protocol and case management follow up
- 10-27-15 ETC contracted to provide EBL investigation services
- 10-27-15 Briefing to Director regarding IEUBK modeling for school drinking water screening value.
- 10-27-15 S.Bien received an email from USDA regional representative, Bruce Hillman, indicating that our Congressional Representatives had sent a letter to Tom Vilsack, Secretary of USDA inquiring about community response to address immediate and long-term needs. Regional USDA representative indicated he would be in contact with MDHHS WIC office to receive an update. MDHHS WIC office responded that we continue to work with the local health department to assure that clients are getting access to filters and bottled water to mix their infant formula. WIC also indicated that at that time there had not been any requests from WIC clients for Ready to Feed Formula.
- 10-28-15 DEH requested by Eden Wells to help clarify CLPPP report for the Director
- 10-30-15 Case management (nursing) contract with Genesee County Health Department begin
- 10-30-15 (approx.) 8500 parent information packets distributed to GCHD

## 6 NOVEMBER 2015

---

- 11-3-15 Director's office received a letter from Tim English, Midwest Regional Administrator for USDA
- 11-5-15 Response to Tim English's inquiry drafted and sent to Director Lyon's office. MDHHS indicates continued monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- 11/6/15 Bruce Hillman, Regional Representation from USDA, notified S. Bien that they had received questions from Katie Bergh from Senator Stabenow's office regarding availability of Ready to Feed, our communication plan, how many clients had requested Ready to Feed.
- 11-6-15 Additional 3500 parent packets distributed to GCHD
- 11-9-15 Transition of 2.0 CLPPP staff to DEH
- 11-12-15 Phone conference with Karla Ruest, Rashmi Travis (MDHHS), Stan Bien (MDHSS-WIC), Kristin Hanulcik (MDHSS- WIC), Bruce Hillman (USDA), Anne Bartholomew (USDA), Katie Bergh (Senator Stabenow's office), and Jaclyn Schneider (Deputy Staff Director US Senate Committee on Agriculture, Nutrition, and Forestry) in regards to the legislative inquiries. Information was provided on how MDHHS is working with the local health department to monitor requests for Ready to Feed formula, continuing to work with the local health department to assure filters

and bottled water are provided to clients, and providing educational materials on Ready to Feed formula to WIC clients. To date, only one WIC client had requested Ready to Feed formula.

- 11-13-15 Call with ATSDR, GCHD and MDHS to discuss outreach material
- 11/16/15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with the local health department to share with providers in the community. This same information was provided to Congressional delegates on 11-12-15 phone conference.
- 11-18-15 DHHS Meets with Governor's Flint Water Task Force
- 11-24-15 DEH Project Management Structure implemented
  - Daily Situation Reports-Reps begin being compiled and distributed to MDHHS staff
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- 11-24-15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

## 7 DECEMBER 2015

---

- 12-3-15 MDHHS BLL Summary Report released
- 12-11-15 MDHHS BLL Summary Report released
- 12-14-15 Meeting with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source

**From:** Lasher, GERALYN (DHHS)  
**Sent:** Tuesday, December 29, 2015 4:07 PM  
**To:** Brownfield, Michael (GOV); Lyon, Nick (DHHS)  
**Cc:** Becker, Timothy (DHHS)  
**Subject:** RE: State of the State update  
**Attachments:** Timeline 12 29 15.docx; MDHHS ISD Overview.docx; OPPORTUNITIES FOR IMPROVED OUTCOMES FOR FAMILIES-SOS2016 (002).docx

Mike—Tim and I have worked to come up with some additional information for you on our topics. Attached you will find:

1. Document titled "Timeline 12 29 15" that will give you the timeline of the Flint Water situation from MDHHS.
2. Document titled "MDHHS ISD Overview" that will give you additional Integrated Service Delivery detail from item B in your outline.
3. Document titled "Opportunities for Improved Outcomes for Families" that will give you additional information for items A.1 and A.3

We still need to work a bit more on item A.2. from the outline so we will see what we can get to you after the first of the year.

Please let us know if this is helpful and what additional information you may need.

Thanks--g

**Sent:** Tuesday, December 22, 2015 3:59 PM  
**To:** Lyon, Nick (DHHS) <LyonN2@michigan.gov>  
**Cc:** Lasher, GERALYN (DHHS) <lsherg@michigan.gov>  
**Subject:** State of the State update

Nick,

Geralyn provided some great info to help me put together the Quality of Life section of the governor's state of the state address (pasted below).

The governor is generally happy with how it's laid out, but he says it needs additional detail and some further work / development. He also noted that the integrated service delivery section will depend on budget issues and hopes that makes the cut, but I think he will want additional detail there, as well. (Detail in this case means more info in the outline, but also supporting briefs and other documents on the proposals).

This is well outside of my wheelhouse, so I'm hoping you can provide some assistance on this. I'm sending the governor another update on the state of the state outline at the end of the day tomorrow, then will be providing him additional materials next week (and after the New Year, of course).

I'm available to talk tomorrow if you want to catch up then.

Thanks,

- A. River of Opportunity (poverty): Lift people out of poverty by putting them on a self-sustainable pathway to success.
  - 1. MDHHS and TIA to increase collaboration with Michigan Works! agencies to help people on assistance programs reach self-sufficiency through education, training, and employment opportunities.
  - 2. Place success coaches in Michigan Works! agencies to aid clients in assistance programs with finding job training and employment opportunities. Clients will work on specific measurable employment goals with their success coaches.
  - 3. MDHHS and TIA will also be focused on a two-generation approach to poverty that would include the whole family. If there are youth aged 14-24 in the home, we will connect them with the Workforce Investment Opportunity Act youth programs.
    - a) Striving for the outcomes of increased employment, increased wages, long term employment and cases closing because of earned income.
    - b) Allow people ages 20-26 to continue post-secondary education and/or skilled trades training.
    - c) Develop training programs that are aligned with in demand occupations by local areas. This would include looking at labor market demands and developing a plan of action to match the skills training to the employers.
- B. River of Opportunity -- The Next Step
  - 1. Smarter, better service (Integrated Service Delivery)
    - a) Move to well-rounded, localized and targeted support, instead of manual processes and fragmented services.
    - b) One virtual location for consistent customer service: Leverage technology for better service; simplify processes, provide a platform for engagement with modern interfaces and functionality
    - c) Case workers and community service partners will serve as success coaches using a shared information technology platform.

## Flint Water: Timeline of Key Events

### 1 PRE JULY 2015

---

- Fall 2014 – Genesee County Health Department (GCHD) identified increase in cases of Legionella; MDHHS assisted GCHD in Epidemiologic analysis
- January 2015: MDHHS assisted with case interviews
- 6-4-15 Final Legionellosis outbreak report sent to Genesee County Health Department and discussed with Centers for Disease Control and Prevention. There were 45 cases laboratory confirmed cases of legionella. Healthcare-associated Legionella was suspected for a subset of cases. Results demonstrated that over half (27/45) of the cases had a healthcare facility exposure in the two weeks prior to their illness onset. In response, the healthcare facility has implemented multiple environmental and procedural measures to alleviate the situation.
  - The source of water at the primary residence was evaluated for all cases. Twenty-one of 45 (47%) cases occurred in people whose residence received City of Flint water. Of the 18 persons that did not report healthcare visits, 8 (44%) were exposed to Flint water at their home.
  - Ten cases had no exposure to a Flint hospital in the 2 weeks prior to illness nor were their homes on the Flint water system.
  - Other possible exposures were evaluated and no other known community exposures were identified.
  - Enhanced surveillance has continued for the remainder of 2015.
- 2-26-2015 - (2 calls) initiated by LeAnn Walters. Contacted Childhood Lead Poisoning Prevention Program-CLPPP (Karen Lishinski) – Ms. Walters expressed concern about Flint water quality and provider refusing to test her children; during second call she related that provider agreed to testing
- 3-4-2015 - (1 call) LeAnn Walters contacted CLPPP because child had elevated blood lead level; city officials wouldn't talk to her about her water; Karen provided EPA contact information

### 2 JULY 2015

---

- 7-22-15 Contact from Mark Johnson U.S. Agency for Toxic Substances and Disease Registry (ATSDR) to L. Dykema regarding Flint drinking water status; asking if Environmental Health was engaged
- 7-23-15 Director office inquiry forwarded to Population Health Administration for review/response
- 7-23-15 Division of Environmental Health (Dykema) contacted DEQ for update on drinking water testing/status. S. Busch relates that city in compliance with lead copper rule; one house with high lead level in water was an anomaly as house was connected to old water main but had since been corrected. This home was the residence of LeAnne Walters from 3-4-15 calls.

- 7-24-15 Childhood Lead Poisoning Prevention Program (CLPPP) requests assistance from Epidemiology to assess magnitude of change in 2014 Blood Lead Levels (in children) for city of Flint
  - Results indicate percentage of Elevated Blood Lead Levels (EBLs) for summer 2014, followed seasonal trends and the levels showed decrease by October. Further analysis would be needed to establish causation.
- 7-28-15 Response sent to Director's office

### 3 AUGUST 2015

---

- 8-4-15 Meeting with Governor's office and Flint pastors. Flint pastors had information provided to Director in response to 7-23-15 inquiry
- 8-6-15 Informal request from Liane Shekter Smith (DEQ) to Kory Groetsch MDHHS-Division of Environmental Health (DEH) after a meeting (unrelated to Flint situation) to assist with health education regarding lead in drinking water. MDHHS-DEH-supervisor made aware of request.
- 8-24-15 Dr. Mona Hanna Attisha contacts Genesee County Health Department for Blood Lead Level data/information
- 8-31-15 DEH staff meet to discuss communication plan for Flint/DEQ per request from DEQ

### 4 SEPTEMBER 2015

---

- 9-2-15 Marc Edwards contacts Bob Scott regarding Flint BLL data
- 9-8-15 Dr. Mona Hanna Attisha contacts CLPPP ( K. Lishinski) regarding BLL data
- 9-9-15 Email sent from Dr. Mona Hanna Attisha to CLPPP (K. Lishinski) requesting the BLL data
- 9-11-15 DEH/DEQ conference call regarding draft communication plan; overview.
- 9-15-15 B. Scott responds to Dr. Larry Reynolds, provides chart
- 9-16-15 Dr. Mona Hanna Attisha emailed B. Scott requesting the MCIR (BLL) data
- 9-16-15 Dr. Mona Hanna Attisha contacts Senator Ananich regarding data request
- 9-22-15 Senator Ananich spoke with Director Lyon regarding Dr. Mona Hanna Attisha's data request and Flint water situation
- 9-22-15 DEQ communications office contacted DHHS communications (A. Minicucci) about Healthy Homes Program
- 9-22-15 MDHHS receives copy of Dr. Mona Hanna Attisha's presentation to be presented at upcoming press event
- 9-23-15 MDHHS WIC office receives an inquiry about availability of bottled water through the WIC program. (Per federal regulations, clients can use SNAP benefits to purchase water, but water is not an allowable food item for purchase under the WIC program).
- 9-24-15 Hurley Press Event
- 9-24-15 Director requests response to Flint water situation
- 9-24-15 Bureau of Epidemiology begins analysis of Flint zip code data utilizing the Poisson Regression for statistical analysis
- 9-25-15 MDHHS responds to Detroit Free Press reporter inquiries

- 9/28/2015 Mark Valacak-Genesee County Health Department Health Officer- contacted M. Miller regarding timeframe for completion of MDHHS data analysis
- 9-29-15 Dr. Eden Wells contacts Dr. Mona Hanna Attisha regarding her study results
- 9-30-15 Briefing to Director comparing Lead Copper Rule Testing and Marc Edwards protocol.

## 5 OCTOBER 2015

---

- 10-2-15 Governor's press conference-MDHHS study results consistent with Hurley findings
- 10-2-15 State Budget Office approval to use carryover emergency funds and transfer of DEQ funds to purchase water filters
- 10-2-15 R.Travis and S. Bien received an inquiry about what Michigan is doing regarding the Flint lead water situation from Jacquelyn Schneider, Deputy Director and Policy Director of US Senate Committee on Agriculture, Nutrition, & Forestry. Ms. Schneider inquired about the availability of Ready -to -Feed formula and asked if we are confident that the water filters that are being provided are sufficient to address the concerns about lead.
- 10-5-15 Filter distribution planning meeting held in Flint with local organizations
- 10-5-15 A teleconference was held with Rashmi Travis, Nancy Peeler, Dr. Eden Wells, Bob Scott, Corinne Miller, Sarah LyonCallo, Patti McKane (MDHSS), and Dr. Mona Hanna-Attisha, Jenny Latanz, and Dr. Richard Sandler (Hurley Lead Research Team) to discuss the nuances of the raw data that was sent on 10-2-15 to the Hurley Research Team.
- 10-5-15 S. Bien provided a response to Jaclyn Schneider indicating the following: that we are in regular contact with the local health department, the majority of WIC clients were already using bottled water to reconstitute infant formula, that a mass distribution (about 4000 filters) of filters was underway, and lead testing was being done adjunct with WIC clinics, and the local health department had additional lead testing opportunities scheduled.
- 10-7-15 Flint Mayor's Water Technical Advisory Committee meeting (E. Wells, L. Dykema); recommends switch back to Detroit Water Authority
- 10-8-15 GCHD issues Public Health Advisory
- 10-12-15 Daily calls with GCHD begin. Topics Include:
  - Distribution and tracking of filters
  - Development and implementation of case management in Flint by GCHD
  - Development and implementation of lead environmental inspection contract
  - Development and distribution of educational materials – to providers and parents
  - Testing events (blood lead)
  - Testing events (water mainly / DEQ activity in the schools)
  - Data analysis (internal meeting)
- 10-13-15 MDEQ/MDHHS/toxic steering group committee meeting discusses use of the Integrated Exposure Update Biokinetic (IEUBK) model for lead in children for the Flint water situation; requested a subcommittee to identify the exposure assumptions that would be developed for schools and homes
- 10-13-15 CLPPP provided Lead Week Toolkit to DEH
- 10-13-15 Began development of the Lead & Your Body infographic

- 10-13-15 MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- 10-16-15 First of weekly meetings with city of Flint meeting DEQ HHS LARA GCHD (Jim Henry) at the Mayor's office
- 10-16-15 MDHHS (L. Dykema) participates in meeting with superintendent of Flint schools
- 10-19-15 Supplemental funding legislation passed
- 10-20-15 Daily calls to GCHD changed biweekly (ongoing)
- 10-21-15 Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding Blood lead testing protocol and case management follow up
- 10-27-15 ETC contracted to provide EBL investigation services
- 10-27-15 Briefing to Director regarding IEUBK modeling for school drinking water screening value.
- 10-27-15 S.Bien received an email from USDA regional representative, Bruce Hillman, indicating that our Congressional Representatives had sent a letter to Tom Vilsack, Secretary of USDA inquiring about community response to address immediate and long-term needs. Regional USDA representative indicated he would be in contact with MDHHS WIC office to receive an update. MDHHS WIC office responded that we continue to work with the local health department to assure that clients are getting access to filters and bottled water to mix their infant formula. WIC also indicated that at that time there had not been any requests from WIC clients for Ready to Feed Formula.
- 10-28-15 DEH requested by Eden Wells to help clarify CLPPP report for the Director
- 10-30-15 Case management (nursing) contract with Genesee County Health Department begin
- 10-30-15 (approx.) 8500 parent information packets distributed to GCHD

## 6 NOVEMBER 2015

---

- 11-3-15 Director's office received a letter from Tim English, Midwest Regional Administrator for USDA
- 11-5-15 Response to Tim English's inquiry drafted and sent to Director Lyon's office. MDHHS indicates continued monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- 11/6/15 Bruce Hillman, Regional Representation from USDA, notified S. Bien that they had received questions from Katie Bergh from Senator Stabenow's office regarding availability of Ready to Feed, our communication plan, how many clients had requested Ready to Feed.
- 11-6-15 Additional 3500 parent packets distributed to GCHD
- 11-9-15 Transition of 2.0 CLPPP staff to DEH
- 11-12-15 Phone conference with Karla Ruest, Rashmi Travis (MDHHS), Stan Bien (MDHSS-WIC), Kristin Hanulcik (MDHSS- WIC), Bruce Hillman (USDA), Anne Bartholomew (USDA), Katie Bergh (Senator Stabenow's office), and Jaclyn Schneider (Deputy Staff Director US Senate Committee on Agriculture, Nutrition, and Forestry) in regards to the legislative inquiries. Information was provided on how MDHHS is working with the local health department to monitor requests for Ready to Feed formula, continuing to work with the local health department to assure filters

and bottled water are provided to clients, and providing educational materials on Ready to Feed formula to WIC clients. To date, only one WIC client had requested Ready to Feed formula.

- 11-13-15 Call with ATSDR, GCHD and MDHS to discuss outreach material
- 11/16/15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with the local health department to share with providers in the community. This same information was provided to Congressional delegates on 11-12-15 phone conference.
- 11-18-15 DHHS Meets with Governor's Flint Water Task Force
- 11-24-15 DEH Project Management Structure implemented
  - Daily Situation Reports-Reps begin being compiled and distributed to MDHHS staff
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- 11-24-15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

## 7 DECEMBER 2015

---

- 12-3-15 MDHHS BLL Summary Report released
- 12-11-15 MDHHS BLL Summary Report released
- 12-14-15 Meeting with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source

## Flint Water: Timeline of Key Events

### 1 PRE JULY 2015

---

- Fall 2014 – Genesee County Health Department (GCHD) identified increase in cases of Legionella; MDHHS assisted GCHD in Epidemiologic analysis
- January 2015: MDHHS assisted with case interviews
- 6-4-15 Final Legionellosis outbreak report sent to Genesee County Health Department and discussed with Centers for Disease Control and Prevention. There were 45 cases laboratory confirmed cases of legionella. Healthcare-associated Legionella was suspected for a subset of cases. Results demonstrated that over half (27/45) of the cases had a healthcare facility exposure in the two weeks prior to their illness onset. In response, the healthcare facility has implemented multiple environmental and procedural measures to alleviate the situation.
  - The source of water at the primary residence was evaluated for all cases. Twenty-one of 45 (47%) cases occurred in people whose residence received City of Flint water. Of the 18 persons that did not report healthcare visits, 8 (44%) were exposed to Flint water at their home.
  - Ten cases had no exposure to a Flint hospital in the 2 weeks prior to illness nor were their homes on the Flint water system.
  - Other possible exposures were evaluated and no other known community exposures were identified.
  - Enhanced surveillance has continued for the remainder of 2015.
- 2-26-2015 - (2 calls) initiated by LeAnn Walters. Contacted Childhood Lead Poisoning Prevention Program-CLPPP (Karen Lishinski) – Ms. Walters expressed concern about Flint water quality and provider refusing to test her children; during second call she related that provider agreed to testing
- 3-4-2015 - (1 call) LeAnn Walters contacted CLPPP because child had elevated blood lead level; city officials wouldn't talk to her about her water; Karen provided EPA contact information

### 2 JULY 2015

---

- 7-22-15 Contact from Mark Johnson U.S. Agency for Toxic Substances and Disease Registry (ATSDR) to L. Dykema regarding Flint drinking water status; asking if Environmental Health was engaged
- 7-23-15 Director office inquiry forwarded to Population Health Administration for review/response
- 7-23-15 Division of Environmental Health (Dykema) contacted DEQ for update on drinking water testing/status. S. Busch relates that city in compliance with lead copper rule; one house with high lead level in water was an anomaly as house was connected to old water main but had since been corrected. This home was the residence of LeAnne Walters from 3-4-15 calls.

- 7-24-15 Childhood Lead Poisoning Prevention Program (CLPPP) requests assistance from Epidemiology to assess magnitude of change in 2014 Blood Lead Levels (in children) for city of Flint
  - Results indicate percentage of Elevated Blood Lead Levels (EBLs) for summer 2014, followed seasonal trends and the levels showed decrease by October. Further analysis would be needed to establish causation.
- 7-28-15 Response sent to Director's office

### 3 AUGUST 2015

---

- 8-4-15 Meeting with Governor's office and Flint pastors. Flint pastors had information provided to Director in response to 7-23-15 inquiry
- 8-6-15 Informal request from Liane Shekter Smith (DEQ) to Kory Groetsch MDHHS-Division of Environmental Health (DEH) after a meeting (unrelated to Flint situation) to assist with health education regarding lead in drinking water. MDHHS-DEH-supervisor made aware of request.
- 8-24-15 Dr. Mona Hanna Attisha contacts Genesee County Health Department for Blood Lead Level data/information
- 8-31-15 DEH staff meet to discuss communication plan for Flint/DEQ per request from DEQ

### 4 SEPTEMBER 2015

---

- 9-2-15 Marc Edwards contacts Bob Scott regarding Flint BLL data
- 9-8-15 Dr. Mona Hanna Attisha contacts CLPPP ( K. Lishinski) regarding BLL data
- 9-9-15 Email sent from Dr. Mona Hanna Attisha to CLPPP (K. Lishinski) requesting the BLL data
- 9-11-15 DEH/DEQ conference call regarding draft communication plan; overview.
- 9-15-15 B. Scott responds to Dr. Larry Reynolds, provides chart
- 9-16-15 Dr. Mona Hanna Attisha emailed B. Scott requesting the MCIR (BLL) data
- 9-16-15 Dr. Mona Hanna Attisha contacts Senator Ananich regarding data request
- 9-22-15 Senator Ananich spoke with Director Lyon regarding Dr. Mona Hanna Attisha's data request and Flint water situation
- 9-22-15 DEQ communications office contacted DHHS communications (A. Minicucci) about Healthy Homes Program
- 9-22-15 MDHHS receives copy of Dr. Mona Hanna Attisha's presentation to be presented at upcoming press event
- 9-23-15 MDHHS WIC office receives an inquiry about availability of bottled water through the WIC program. (Per federal regulations, clients can use SNAP benefits to purchase water, but water is not an allowable food item for purchase under the WIC program).
- 9-24-15 Hurley Press Event
- 9-24-15 Director requests response to Flint water situation
- 9-24-15 Bureau of Epidemiology begins analysis of Flint zip code data utilizing the Poisson Regression for statistical analysis
- 9-25-15 MDHHS responds to Detroit Free Press reporter inquiries

- 9/28/2015 Mark Valacak-Genesee County Health Department Health Officer- contacted M. Miller regarding timeframe for completion of MDHHS data analysis
- 9-29-15 Dr. Eden Wells contacts Dr. Mona Hanna Attisha regarding her study results
- 9-30-15 Briefing to Director comparing Lead Copper Rule Testing and Marc Edwards protocol.

## 5 OCTOBER 2015

---

- 10-1-15 MDHHS provides information for Flint Water website, including the following documents: Parent Handbook: Is Your Child Safe From Lead Poisoning, Blood Lead Level (BLL) Quick Reference for Primary Care Providers, Lead Screening & Testing for Safe, Healthy Michigan Kids, and finally, Pregnant and Nursing Mothers: What You Need to Know
- 10-2-15 Governor's press conference-MDHHS study results consistent with Hurley findings
- 10-2-15 State Budget Office approval to use carryover emergency funds and transfer of DEQ funds to purchase water filters
- 10-2-15 R.Travis and S. Bien received an inquiry about what Michigan is doing regarding the Flint lead water situation from Jacquelyn Schneider, Deputy Director and Policy Director of US Senate Committee on Agriculture, Nutrition, & Forestry. Ms. Schneider inquired about the availability of Ready -to -Feed formula and asked if we are confident that the water filters that are being provided are sufficient to address the concerns about lead.
- 10-5-15 Filter distribution planning meeting held in Flint with local organizations
- 10-5-15 A teleconference was held with Rashmi Travis, Nancy Peeler, Dr. Eden Wells, Bob Scott, Corinne Miller, Sarah LyonCallo, Patti McKane (MDHSS), and Dr. Mona Hanna-Attisha, Jenny Latanz, and Dr. Richard Sandler (Hurley Lead Research Team) to discuss the nuances of the raw data that was sent on 10-2-15 to the Hurley Research Team.
- 10-5-15 S. Bien provided a response to Jaclyn Schneider indicating the following: that we are in regular contact with the local health department, the majority of WIC clients were already using bottled water to reconstitute infant formula, that a mass distribution (about 4000 filters) of filters was underway, and lead testing was being done adjunct with WIC clinics, and the local health department had additional lead testing opportunities scheduled.
- 10-5-15 MDHHS announces water filters will be available to the public on Oct. 6
- 10-6-15 MDHHS announces extended hours for filter distribution, updates Parent Handout on Flint Water website
- 10-7-15 Flint Mayor's Water Technical Advisory Committee meeting (E. Wells, L. Dykema); recommends switch back to Detroit Water Authority
- 10-8-15 GCHD issues Public Health Advisory
- 10-12-15 Daily calls with GCHD begin. Topics Include:
  - Distribution and tracking of filters
  - Development and implementation of case management in Flint by GCHD
  - Development and implementation of lead environmental inspection contract
  - Development and distribution of educational materials – to providers and parents
  - Testing events (blood lead)
  - Testing events (water mainly / DEQ activity in the schools)

- Data analysis (internal meeting)
- 10-13-15 MDEQ/MDHHS/toxic steering group committee meeting discusses use of the Integrated Exposure Update Biokinetic (IEUBK) model for lead in children for the Flint water situation; requested a subcommittee to identify the exposure assumptions that would be developed for schools and homes
- 10-13-15 CLPPP provided Lead Week Toolkit to DEH
- 10-13-15 Began development of the Lead & Your Body infographic
- 10-13-15 MDHHS Division of Environmental Health, MDEQ, and LARA begin weekly briefing regarding school drinking water sampling
- 10-15-15 Angela Minicuci requests the addition of the MDHHS/GCHD Lead Flint Water Fact Sheet to the Flint Water website
- 10-16-15 First of weekly meetings with city of Flint meeting DEQ HHS LARA GCHD (Jim Henry) at the Mayor's office
- 10-16-15 MDHHS (L. Dykema) participates in meeting with superintendent of Flint schools
- 10-19-15 Supplemental funding legislation passed
- 10-20-15 Daily calls to GCHD changed biweekly (ongoing)
- 10-21-15 Dr. Wells and N. Peeler speak to Medicaid Health Plans (Clinical Advisory Committee meeting) regarding Blood lead testing protocol and case management follow up
- 10-22-15 Angela Minicuci requests updates to the Flint Water website of the Lead Flint Water, and Lead and Your Body documents after GCHD edits; Angela Minicuci contacted Sheryl Thompson about recording a video about how to replace a water filter in collaboration with Home Depot
- 10-23-15 DEQ's videographer, Eric Shaw, met with Home Depot employee in Flint to record his instructions about how to install and replace a filter
- 10-27-15 ETC contracted to provide EBL investigation services
- 10-27-15 Briefing to Director regarding IEUBK modeling for school drinking water screening value.
- 10-27-15 S. Bien received an email from USDA regional representative, Bruce Hillman, indicating that our Congressional Representatives had sent a letter to Tom Vilsack, Secretary of USDA inquiring about community response to address immediate and long-term needs. Regional USDA representative indicated he would be in contact with MDHHS WIC office to receive an update. MDHHS WIC office responded that we continue to work with the local health department to assure that clients are getting access to filters and bottled water to mix their infant formula. WIC also indicated that at that time there had not been any requests from WIC clients for Ready to Feed Formula.
- 10-28-15 DEH requested by Eden Wells to help clarify CLPPP report for the Director
- 10-28-15 – Brita filter replacement video was picked up by Angela Minicuci from Eric Shaw
- 10-30-15 Case management (nursing) contract with Genesee County Health Department begin
- 10-30-15 Angela Minicuci requests that the parent and provider letters, along with their attachments, be posted to the Flint Water website
- 10-30-15 (approx.) 8500 parent information packets distributed to GCHD

## 6 NOVEMBER 2015

---

- 11-3-15 Director's office received a letter from Tim English, Midwest Regional Administrator for USDA
- 11-4-15 Brita filter replacement video posted to the MDHHS YouTube channel
- 11-5-15 Response to Tim English's inquiry drafted and sent to Director Lyon's office. MDHHS indicates continued monitoring of Ready to Feed formula use and coordinating with Ready to Feed manufacturer and WIC retailers to proactively address any supply or distribution issues with infant formula availability.
- 11/6/15 Bruce Hillman, Regional Representation from USDA, notified S. Bien that they had received questions from Katie Bergh from Senator Stabenow's office regarding availability of Ready to Feed, our communication plan, how many clients had requested Ready to Feed.
- 11-6-15 Additional 3500 parent packets distributed to GCHD
- 11-9-15 Transition of 2.0 CLPPP staff to DEH
- 11-12-15 Phone conference with Karla Ruest, Rashmi Travis (MDHHS), Stan Bien (MDHSS-WIC), Kristin Hanulcik (MDHSS- WIC), Bruce Hillman (USDA), Anne Bartholomew (USDA), Katie Bergh (Senator Stabenow's office), and Jaclyn Schneider (Deputy Staff Director US Senate Committee on Agriculture, Nutrition, and Forestry) in regards to the legislative inquiries. Information was provided on how MDHHS is working with the local health department to monitor requests for Ready to Feed formula, continuing to work with the local health department to assure filters and bottled water are provided to clients, and providing educational materials on Ready to Feed formula to WIC clients. To date, only one WIC client had requested Ready to Feed formula.
- 11-13-15 Call with ATSDR, GCHD and MDHS to discuss outreach material
- 11/16/15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with the local health department to share with providers in the community. This same information was provided to Congressional delegates on 11-12-15 phone conference.
- 11-18-15 DHHS Meets with Governor's Flint Water Task Force
- 11-24-15 DEH Project Management Structure implemented
  - Daily Situation Reports-Reps begin being compiled and distributed to MDHHS staff
  - Bi-weekly calls with GCHD change to weekly (ongoing)
- 11-24-15 Information on Ready to Feed formula (including Talking Points, WIC Provider Letter, and infographic on Ready to Feed formula) was shared with Medicaid to share with the Medicaid Health Plans.

## 7 DECEMBER 2015

---

- 12-3-15 MDHHS BLL Summary Report released and is posted to Flint water website
- 12-7-15 Angela Minicuci requests update to the Flint Water website of the Lead and Your Body FAQ
- 12-8-15 Angela Minicuci requests removal of the Fight Lead with a Healthy Diet PDF until it's updated
- 12-11-15 MDHHS BLL Summary Report released and is posted to Flint water website

- 12-14-15 Meeting with MSA to develop specifications for production of Medicaid population based blood lead testing reports for children in Flint exposed to Flint city water source
- 12-23-15 MDHHS issues third summary EBLR report noting change in method, report posted to Flint Water website

**Subject:** RE: Management ICS Draft  
**Importance:** High

All,

Attached are the main components of an ICS Incident Action Plan (including ICS 202,203,204, and 207) as requested. We've included only one ICS 204 Assignment Form for the EBL Investigation Group...others can be built if you want to go forward.

Kudos to Kory and Jennifer: we sequestered ourselves in a conference room to create this draft.

Linda

**Subject:** Management ICS Draft

Hi Linda,

I talked with Corinne and Sue—

Could you develop what would, in your eyes, be an optimal ICS structure if EH would become the operations center?

Goals would be:

1. Coordinate interagency and federal/state/local issues as we proceed into this EBL investigation phase
2. Coordinate interagency and federal/state/local communications as we proceed into this EBL investigation phase
3. Enhance blood level testing of children if not reaching maximum capacity as monitored by the CLPP and EPID teams on a bi-weekly basis.

If we can get even a schematic (does not need to be perfect, and is your draft first cut) sent to Corinne and Sue asap, that would be great--

Eden

## INCIDENT OBJECTIVES (ICS 202)

<b>1. Incident Name:</b> Flint Drinking Water	<b>2. Operational Period:</b> Date From: Friday Time From:	Date To: Thursday Time To:											
<b>3. Objective(s) and Strategies:</b> Objective 1. Protect children from exposure to lead in drinking water.  Strategy 1.1. Promote blood lead testing of children to reach maximum capacity. Strategy 1.2. Ensure that all residents in the city of Flint are provided with water filters and replacement cartridges. Strategy 1.3. Provide case management services to families of children with blood lead levels greater than or equal to 5 micrograms of lead per deci-liter of blood Strategy 1.4. Provide EBL environmental investigations to identify sources and levels of exposure to lead in drinking water and other environmental media.  Objective 2. Coordinate inter-agency response and federal/state/local communications.  Strategy 2.1. Create a communications plan to coordinate messaging, health education, and outreach materials for the public. Strategy 2.2. Coordinate MDHHS intra-agency response activities. Strategy 2.3. Facilitate inter-agency coordination to address lead in Flint drinking water.													
<b>4. Operational Period Command Emphasis:</b> Intra-agency coordination within MDHHS and with all local/state/federal partners.													
<b>General Situational Awareness</b> Winter weather conditions and firearm deer hunting season may complicate travel to Flint.													
<b>5. Site Safety Plan Required?</b> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> <b>Approved Site Safety Plan(s) Located at:</b>													
<b>6. Incident Action Plan</b> (the items checked below are included in this Incident Action Plan): <table style="width: 100%;"> <tr> <td><input type="checkbox"/> ICS 202</td> <td><input type="checkbox"/> ICS 206</td> <td rowspan="5" style="vertical-align: top;"> <b>Other Attachments:</b>  <input type="checkbox"/> _____  <input type="checkbox"/> _____  <input type="checkbox"/> _____  <input type="checkbox"/> _____         </td> </tr> <tr> <td><input checked="" type="checkbox"/> ICS 203</td> <td><input type="checkbox"/> ICS 207</td> </tr> <tr> <td><input checked="" type="checkbox"/> ICS 204</td> <td><input type="checkbox"/> ICS 208</td> </tr> <tr> <td><input type="checkbox"/> ICS 205</td> <td><input type="checkbox"/> Map/Chart</td> </tr> <tr> <td><input type="checkbox"/> ICS 205A</td> <td><input type="checkbox"/> Weather Forecast/Tides/Currents</td> </tr> </table>			<input type="checkbox"/> ICS 202	<input type="checkbox"/> ICS 206	<b>Other Attachments:</b> <input type="checkbox"/> _____ <input type="checkbox"/> _____ <input type="checkbox"/> _____ <input type="checkbox"/> _____	<input checked="" type="checkbox"/> ICS 203	<input type="checkbox"/> ICS 207	<input checked="" type="checkbox"/> ICS 204	<input type="checkbox"/> ICS 208	<input type="checkbox"/> ICS 205	<input type="checkbox"/> Map/Chart	<input type="checkbox"/> ICS 205A	<input type="checkbox"/> Weather Forecast/Tides/Currents

**To:** Moran, Susan (DHHS); Miller, Corinne (DHHS); Eden  
**Subject:** RE: 2DEc15 SitRep

How's this?

- **CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with EBLI of 52 µg/dl. GCHD Nurse reports that the child's lead level has decreased to 20 µg/dl.**

---

**From:** Moran, Susan (DHHS)  
**Sent:** Thursday, December 03, 2015 10:48 AM  
**To:** Dykema, Linda D. (DHHS); Miller, Corinne (DHHS); Eden  
**Subject:** RE: 2DEc15 SitRep

Typo under Epidemiology surveillance

- **. Master list will be compiled on Monday and HHS staff and GCHD who will track their CM activities re these children and report back to HHS on Friday.**

Can we remove this section, I think it's still confusing to say level confirmed at 36. And we have a statement that nurse says it's 20....

- **CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with high EBLI, per our Nursing protocol. Second lab report received, confirming that his BLL had dropped from 52 to 36 µg/dl. GCHD Nurse reports that the child's lead level has decreased to 20 µg/dl, but the lab report has not yet been received at HHS.**

**Subject:** RE: 2DEc15 SitRep

This would be a new item. Add under healthcare provider section...Sue/Eden edit if necessary.

Moran, Wells and Miller met with Medicaid health plan staff on December 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs. Medicaid also suggested inviting Dr. Wells to speak about Flint at a future meeting with Medicaid health plan medical directors. Medicaid identified three individuals to partner with epidemiology staff to develop a roster of Flint children enrolled in Medicaid to provide more precise estimates on the percentage of Flint children enrolled in Medicaid who receive EBL testing.

## Flint Water Lead Project

### Michigan Department of Health and Human Services Situation Report for December 2, 2015

**\*\*NOTE: Contains potentially Identifiable Information- REDACT AS INDICATED\*\***

**New items for the day listed first and in bold print.**

**Daily Briefing and Situation Report** prepared by Linda Dykema

**Surveillance Indicators:** People Tested since 10/1/2015: 1,361;

Children less than 6 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 15

Children 6 to 17 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 6

Adults 18 years and older  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 9

**Severity Indicators:** Hospitalized/Discharged-1/1; Deaths- 0

#### DAILY ACTIVITY SUMMARY

**Elevated Blood Level (EBL) Environmental Investigations** – ETC Contractors, Wes Priem, Courtney Wisinski

- **3 EBL investigations completed.**
- 8 investigations scheduled.
- The high EBL home is scheduled for Friday 12/4/15.

**MDHHS/Genesee County Health Department (GCHD) Case Management (CM) Services** – Nancy Peeler

- CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with EBL of 52  $\mu\text{g}/\text{dl}$ . GCHD Nurse reports that the child's lead level has decreased to 20  $\mu\text{g}/\text{dl}$ .
- Received calls from Rep. Neely's office regarding an upcoming Health Fair, asking about CLPPP participation or provision of materials (may be on December 15th at a Methodist church?). Suggested that GCHD staff as their best contact: shared with GCHD as they may receive a call.
- CM report through 11/25/15:
  - # of contacts attempted: 136
  - # offered CM: 46
  - # CM started: 5
  - # of children receiving CM who live in Flint: 5
  - # billed to Medicaid: 5
  - # Other disposition: 2 (2 children moved to Oakland County)

**Epidemiology/Surveillance** – Patti McKane, Martha Stanbury, Bob Scott, Jessica Cooper, Karen Lishinski

- Established protocol for notifying HHS staff and GCHD about Flint EBL children. Master list will be compiled on Monday and HHS staff and GCHD who will track their CM activities re these children and report back to HHS on Friday.

**Filter Distribution** Sheryl Thompson

|--|---|

#### **Communications/Information Sharing** – Linda Dykema, Eden Wells

- Linda Dykema received call from Dr. Mark Johnson, ATSDR R5 Senior Regional Representative and CDC main point of contact. Provided an update on HHS activities.
- Wes Priem attended a Michigan Community Development Directors' conference on housing where he talked with Susan Wilcox, Manager for Flint Community and Economic Development Program. She will schedule a meeting with HHS staff to discuss application of the Landlord Penalty Law in city of Flint.
- Weekly (Tues. 8:00 am) coordination call with DEQ/LARA/HHS. Discussed need for informational materials for schools/residents regarding lead free plumbing replacements.
- Technical Advisory Committee meeting originally scheduled for December 9<sup>th</sup> - , then postponed by City of Flint, may actually take place: awaiting word from City.

#### **Health Education Resources Updates** - Michelle Bruneau, Emily Houk

- Met with Liane Shekter-Smith (MDEQ), Steve Busch (MDEQ), Kory Groetsch (MDHHS), and Jennifer Gray (MDHHS) to discuss Phosphate Fact Sheet; changes forthcoming
- Coordinating meeting with GCHD and MDHHS to discuss phosphate dosing and potential health implications
- Sent out draft of "Bath Time" fact sheet to MDHHS and GCHD for review reiterating that it's safe for adults and children to bathe in Flint tap water; requested quote via Eden from Dr. Mona Hanna-Attisha
- Continuing to write and coordinate additions to the EBL Case Manager Binder, now known as the MDHHS Lead Safe Family Guide Book.
- Pending: Aerator/Filter Maintenance Fact Sheet; Flint Parent Letter re-do in partnership with Emily Houk.

#### **Toxicology** - Kory Groetsch, Jennifer Gray, Lisa Quiggle

- Working with GCHD and DEQ to address questions concerning impact of phosphate treatment on drinking water filters.
- Working with Healthy Homes Section staff to revise EBL report for Flint Residents.

#### **WIC**

- Letter sent 11/24 to GCHD about Ready-to-feed formula availability from WIC program
- Talking points for WIC staff and for providers shared

#### **Healthcare/Providers**

- Moran, Wells and Miller met with Medicaid health plan staff 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs and suggested inviting Dr. Wells to speak to Medicaid health plan medical directors.
- Medicaid identified three individuals to partner with epidemiology staff to develop methodology to measure/report progress on the percentage of Flint children enrolled in Medicaid who receive EBL testing.
- Forum for primary care providers in Flint POSTPONED pending coordination with local providers
- WIC information to be shared by GCHD to providers

**DEQ Information** - Linda Dykema as Liaison

- MDEQ would like to issue school drinking water testing results in coordination with MDHHS release of the blood lead test reporting.

## EXECUTIVE SUMMARY

Special Pathogens Laboratory (SPL) was contacted by McLaren Flint Health Care to assist the hospital in responding to an increase in the incidence of Legionnaires' disease due to *Legionella pneumophila*, serogroup 1. The Genesee County Health Department

had also been in contact with the hospital regarding cases of Legionnaires' disease in patients that had been diagnosed and treated at the hospital. This increase in cases had been observed over the past year when water quality in Flint was adversely affected when the city switched from Detroit water to the Flint River last year.

SPL was asked to provide consultation services, including an on-site risk assessment, review of the facility's current Legionella policy, and development of a Water Safety Plan for the facility.

Assessments of McLaren Flint Hospital buildings were performed from August 11 – 13, 2015. The assessment including collection of samples for *Legionella* culture from distal hot water sites, distal cold water sites, hot water heaters, a hot water return, and the cold water entries. Physicochemical measurements, including pH, temperature, and free chlorine, were also taken.

*Legionella pneumophila* serogroup 1 was detected across all systems, with the majority of hot water distal sites (water outlets) showing some level of positivity.

McLaren Flint Hospital Administration, Infectious Diseases, Facilities Engineering and Infection Control acted aggressively to address the potential risk for hospital-acquired Legionnaires' disease. Staff worked with SPL to expedite both short and long-term approaches to prevention. This included recommendations for

rapid identification and treatment of cases as well as recommendations regarding options for installation of secondary water treatment (disinfection).

The hospital staff performed a "shock" hyperchlorination disinfection in Buildings F, A, and B/C. The hyperchlorination disinfection for Building F Upper System was completed on August 14-15, 2015 and re-sampled for *Legionella* on August 17, 2015.

The "post-disinfection" culture results showed that *Legionella* concentrations were significantly lower—indicating the hyperchlorination disinfection was a successful short-term remediation which temporarily reduced *Legionella*.

Long-term secondary disinfection with monochloramine was recommended in patient care areas because of its proven efficacy and ability to rapidly reduce *Legionella* in hospital hot water systems. A Water Safety Plan is being developed to provide on-going risk management and to comply with the new ASHRAE 188 *Legionella* standard.

These efforts have resulted in successfully reducing *Legionella* in the hospital water systems. No cases of healthcare-acquired Legionnaires' disease were identified following these measures.

Shannon and I have worked out estimated illness onset dates for the Legionnaires' disease cases and these are now displayed in graphs in the attached document. One graph shows the dates by day (keyboard effect) and the second shows the dates by month. When I was speaking with Suzanne C at ELC, she was under the impression that the peak was in September – which it is by MDSS referral date, but plotting by illness onset date shows both August and September were peak months. A lesson is the advantages of why we do epi curves!

Lily has successfully completed one interview of the very first case and says she will be doing the second today.

Susan

I am exceedingly busy---would recommend following all press releases (go to the MDHHS site) as well as those that come out today and tomorrow AM. That was not an emergency declaration, it was an emergency advisory. This is a multi-agency response being coordinated by the Governor's office. Will forward talking points to Jim Collins---if he thinks OK to send out to you all that is OK, not sure of how far distribution should go

Also, I- do not tend to look at UM emails as frequently when doing MDHHS stuff ---you all got lucky!

Hi Guys,

I don't have anything written up - been staying away from this issue (kind of outside the CD realm, eh?). Mlive has had some good articles with timelines and actions taken by city/state government and the health department.

When the Hurley Doc released her evaluation of lead data from their clinic evaluations there was an initial response from our environmental health folks that suggested that their data didn't show what Hurley's did. Unfortunately, after paring down MDHHS data to just kids who likely were exposed to Flint drinking water Eden (Wells) was quoted in one article that there indeed was an increase in kids less than 6 after the switch. (You may want to talk with Eden, Joyce - I've only been privy to what is in the news.) The Public Health Emergency was declared after that - (last Thursday).

Honestly, I wouldn't offer too much information on this issue...(That's my 2 cents)

Wes - per the EPA request to you, the attachment contains two graphics on childhood blood lead testing in Flint.

Jay - this information likely will be shared with the local health department, if it hasn't been already (there is an MDHHS childhood lead poisoning health educator in the Flint-area), because the MDHHS toxicologists, MDEQ and the county health department spoke last week about the development of standard messaging related to lead in drinking water.

Subject: RE: Director's Office Assignment -- Flint - need update asap

I apologize for the delay in responding more specifically to this assignment, it took some time to review our Childhood Lead Poisoning Prevention program data to see if it might contribute to the understanding of the situation in Flint with their water supply. Here is what we found:

We looked at lead testing results for May 2014-April 2015, which is the 12 month time frame just after Flint started drawing their water from the river (water source changed in April 2014). We compared lead testing rates and lead testing results to the same time frame for the previous 3 years, to see if there were any patterns that suggested that there were increased rates of lead poisoning after the water supply was switched. Per the attached charts -

- \* Lead testing rates remained about the same from year to year (chart on the right).
- \* There was a spike in elevated blood lead tests from July-September 2014 (chart on the left, gold line).
- \* However that pattern was not terribly different from what we saw in the previous three years, especially in 2011-2012 (we are working with our Epidemiologist to statistically verify any significant differences).
- \* We commonly see a 'seasonal effect' with lead, related to people opening and closing windows more often in the summer, which disturbs old deteriorating paint on the windows, sills and sashes. Window fans frequently blow and spread the lead dust from the deteriorating paint to other parts of the room/house. We suspect that the summer data spike may be related to this effect.
- \* If the home water supply lines and/or river water were contributing to elevated blood lead tests, we expected that the increased rates would extend beyond the summer, but they drop quite a bit from September to October, stayed low over the winter, and are just starting to tail up again in the spring of 2015.

So upon review, we don't believe our data demonstrates an increase in lead poisoning rates that might be attributable to the change in water source for Flint. We recognize that lead exposure via the water is only a small piece of what may be happening for families in Flint, however, we hope the information is helpful.

To: Anderson, Paula (DCH)  
Subject: RE: Flint - need update asap

There's an article from the metro times I located:

<http://www.metrotimes.com/Blogs/archives/2015/07/14/flint-family-finds-hazardous-waste-levels-of-lead-in-its-tap-water>

Based on this it sounds like at least one family might have had a child with elevated lead blood levels, which might or might not have come from the water. Sounds like the issue is old lead service lines, but there seems to be some difference of opinion on appropriate testing methods.

I'd send this over to Linda Dykema, Wes Priem and Nancy Peeler for their comments.

DEQ has jurisdiction over municipal water supplies, but we do have a program to follow-up on children with elevated blood lead levels, so I think it would be appropriate for the folks above to discuss the situation and recommend any action.

Mark

I'm frustrated by the water issue in Flint. I really don't think people are getting the benefit of the doubt. Now they are concerned and rightfully so about the lead level studies they are receiving from the DEQ samples. Can you take a moment out of your impossible schedule to personally take a look at this? These folks are scared and worried about the health impacts and they are basically getting blown off by us (as a state we're just not sympathizing with their plight).

Hi Suzanne

Thank you for the information on Legionella.

For the non-legionella water issues, here are some documents that might assist with thinking about complaints related to drinking water. The 2007 investigation in Vermont has some questions designed to assess health effects such as dermatitis that might be helpful. However that investigation was very difficult, partly because some members of the community and outside groups attempted to influence the results of the investigation. If you want to discuss that investigation further, I can contact the staff who participated for their feedback.

If you want to pursue these other complaints, it would be good to gather standard information on each complaint and categorize by syndrome, time, location, etc. You might already be doing this. We previously discussed syndromic surveillance; I am glad to discuss that further if you are interested. We don't have experience doing that type of analysis in this situation but there might be others who do.

Regards  
Jonathan

**Subject:** RE: Follow-up Information

Attached is additional information Shurooq prepared yesterday to supplement our conversation information. It includes the number of confirmed Legionella cases in Genesee County *by calendar year*. To clarify, the number we quoted for 2013 yesterday reflects our fiscal year which is October 2012-2013 and included confirmed and suspect cases.

Hello,

Attached please find the survey data of cases interviewed by MDHHS and Genesee Co HD so far (EpiInfo analysis) and updated info on the investigation (MDHHS Prelim Stats). We've included an agenda to help guide tomorrow morning's call.

#### Call Agenda

##### Summarizing the Investigation/Epidemiology

- Preliminary Statistics MDHHS (Shannon & Susan)
- Interview Data MDHHS (Lily & Meghan)
  - EPI Info Analysis
- EPI Curve GCHD
- Discussion of Current Investigation All

##### Environmental Investigation

- Environmental Sampling Protocol CDC

• Discussion

All

Additional Recommendations

• Additional Recommendations

**Subject:** RE: CDC-GCHD Call

Thanks, Suzanne. In just looking at this quickly, I'm wondering if you can you break down the epi curve in the following ways:

--Color code the cases with exposure to McLaren during their incubation periods

--Color code by some kind of indicator of exposure to Flint water (maybe Q.3?).

You've probably already looked at this in several different ways, and I think there are other ways to look at it as well, but perhaps that might help us. Thanks!

**Subject:** RE: CDC-GCHD Call

Hello,

Yes, 9:00 or 9:30 on Thursday works for us. Let us know the final details when they're decided.

Of the topics mentioned below, at this point in time it would be best to focus on:

- \* the current investigation,
- \* CDC walk-through of the environmental sampling protocol,
- \* and a discussion of any additional recommendations.

It's very likely that these topics will fill our allotted time. There's no need to discuss the clinical specimen collection and guidance that has already been provided to GCHD and sent to local providers. The syndromic surveillance data project

would be better handled at the local/state level and should not take away from the ongoing epi investigation that we're currently assisting GCHD with.

Thanks, and we look forward to hearing from you. --Jay

**Subject:** RE: CDC-GCHD Call

We were trying to coordinate schedules for Thursday (4/30) or Friday (5/1) of this week. Please let us know if we could schedule a meeting either of those days.

We have two major events next week: Our Public Health Conference 5/5/15 and the Speak To Your Health! Community Survey Data Roll-Out 5/7/15.

Jay had asked what the agenda would look like. Our suggestion would be:

A Review of the current investigation (Statistics, Questionnaire Responses, Issues Addressed, Current Concerns)

Discussion of clinical sample protocols

Discussion of environmental sampling protocols

Submission of the samples to CDC

Syndromic Surveillance Project

Suggestions for Additional Assistance .

Thank you.

Suzanne

**Subject:** RE: CDC-GCHD Call

Hi Suzanne,

I met with colleagues and leadership at CDC, and we are very concerned about this Legionnaires' disease outbreak. It's very large, one of the largest we know of in the past decade, and community-wide, and in our opinion and experience it needs a comprehensive investigation. I know you all have been working on this for quite a while, but we are unclear

about which steps have been taken and what is currently known, and we feel a sense of urgency. Is it possible to meet before May 8<sup>th</sup>? It's difficult to give advice when we don't have all the information, but we are eager to help. You may have already taken several of these steps, but we recommend a full investigation including the following steps:

- Generate an epi curve, map the cases, interview all cases with a hypothesis-generating questionnaire, analyze results from questionnaire (I believe this has been done, and, if so, it would be helpful to review these results with you.)
- Based on these results, determine whether we can either rule out any sources or start investigating any sources. (I believe you have started this...for example you mentioned that some cases were possibly healthcare-associated.)
- Full environmental investigation of any potential sources (We can provide information on how to collect samples, etc. if needed.)
- If the source(s) is found, provide remediation recommendations to stop the outbreak.

I know you've run into issues getting information you've requested from the city water authority and the MI Dept of Environmental Quality. Again, not knowing the full extent of your investigation it's difficult to make recommendations, and it may be difficult for us to provide the kind of detailed input needed for such an extensive outbreak from afar. If you and others at the state feel you would benefit from more intensive assistance with continuing the investigation for any reason, please let us know and we can discuss providing field assistance in the form of an Epi-Aid.

Best regards,  
Laurel

Hello Suzanne,

Looking at our schedules, we have limited availability of our core staff here at DHHS on Friday May 8<sup>th</sup>. In order to help prioritize or to determine if we should look for an alternate meeting time, can we get an idea of what the agenda will be for this call?

Thanks. -Jay

Hi Suzanne

It was good to speak to you yesterday. I am copying Laurel on this email as the contact for the legionella program. She will coordinate with the state to make sure you have the protocols.

We are glad to assist.

Jonathan

Jonathan-

Thank you and your team for the opportunity to speak yesterday. We appreciate your comments about a measured response. We recognize we do not have the data we need for further action. We were grateful for the opportunity to share with you and our state colleagues our concerns based on the information we do have. We are doing everything we can to mitigate risk to our residents.

We look forward to receiving the sampling protocols and advice related to syndromic surveillance. Our concerns have now been communicated which opens the door to further communication as events unfold.

We are dealing with complex and confounding information. We appreciate your assistance in gathering the facts. We want to be prepared to protect the health and safety of our residents and provide appropriate information.

Thank you again.

Your Genesee County Colleagues

### INTRODUCTION

The U.S. Environmental Protection Agency (EPA) requires all public water supplies (PWSs) using surface water to disinfect the water provided to their customers. In addition, all PWSs are required to maintain a residual disinfectant throughout the water distribution system to control bacterial re-growth. PWSs have several options for methods to disinfect drinking water, including filtration or chemical disinfection with chlorine or chloramine. Because chloramine produces fewer of the drinking water disinfection by-products that are currently regulated by the EPA, using chloramine as a secondary disinfectant is becoming more common. Chloramine is produced by combining chlorine and ammonia in water and, under the usual conditions of water and wastewater chlorination, monochloramine is the principal end product and disinfectant. Chloramine has been approved for use by the EPA; however, data gaps remain about the potential health effects of using chloramine for large scale water disinfection.

Chloramine has been used since before World War II for drinking water treatment. Its most frequent current use is as a residual disinfectant; its use allows systems to maintain the required detectable residual throughout the distribution system while simultaneously controlling regulated disinfection byproducts (total trihalomethanes (TTHM) and five haloacetic acids (HAA5)). There is also evidence that chloramine may control biofilm in the distribution system more effectively than other residual disinfectants (see EPA's website for information about chloramine disinfection of drinking water: <http://www.epa.gov/safewater/disinfection/chloramine/index.html>).

### BACKGROUND

On April 10, 2006, Vermont's Champlain Water District (CWD) changed its drinking water treatment process to use chloramine rather than chlorine as the secondary disinfectant. CWD's use of chloramine is consistent with use in systems across the

country. This change affected Chittenden County (12 municipal systems that serve approximately 68,000 people). Between April 2006 and May 2007, the Vermont Department of Health Agency of Human Services and the Champlain Water District received approximately 74 calls from community members reporting a wide range of health symptoms, including upper respiratory symptoms, complaints of watery eyes and nose, scratchy throat, gastrointestinal ailments, skin rashes, and “itchy skin.” The Division of Environmental Hazards and Health Effects (EHHE) of the National Center for Environmental Health (NCEH) was asked to investigate community concerns regarding exposure to chloramine treated tap water.

## **METHODS**

On September 25, 2007 a seven person team from CDC and the EPA arrived in Burlington, Vermont. The team from CDC consisted of two Epidemic Intelligence Service Officers, a Senior Epidemiologist, and a Medical Student. The team from the EPA consisted of the Associate Director of Drinking Water from EPA’s Region 1 in Boston, MA; and a Water Engineer, and an Environmental Science and Policy Specialist from the Office of Water/Ground Water and Drinking Water Standards and Risk Management Division in Washington, DC. The objective of the trip was to gather information to better understand community concerns about symptoms believed to be associated with exposure to tap water disinfected with chloramine.

Tuesday afternoon, 9/25, the CDC team met with the Vermont Department of Health and reviewed a questionnaire prepared by CDC to characterize symptoms which people reported to be associated with chloramine exposure.

On Wednesday 9/26, there was a full day of meetings that allowed an organized venue for various groups to express their concerns about chloramine exposure. Our meetings started with the Commissioner of Health, Commissioner of Environmental Conservation, and Health Department staff. We then met with the Champlain Water District senior staff and engineers, and then the State’s Senator and local Representatives. In the afternoon on Wednesday, we met with advocacy groups: People Concerned about Chloramine (PCAC) and Vermonters for a Clean Environment. On Thursday morning 9/27, we toured the water treatment plant to view their drinking water treatment process. Home visits and telephone interviews were conducted from Wednesday afternoon through Friday afternoon. We returned to Atlanta on Friday evening, 9/28.

The media requested permission to attend all of the meetings scheduled for Wednesday. They were provided the opportunity to interview representatives from each group involved in the meetings and to record the meeting with the advocacy groups.

<b>Group</b>	<b>Stated Objective for Participation in Meeting</b>
People Concerned about Chloramine	To have chloramine removed from drinking water
Vermonters for a Clean Environment	To have chloramine removed from drinking water
State Legislators	Wanted to understand all issues
Champlain Water District	Explain their water treatment process, changes in the process, and their concerns

## **HOME VISITS AND TELEPHONE INTERVIEWS**

### Participant inclusion criteria

Eligible participants included all individuals residing in Chittenden County, Vermont, who had contacted the Champlain Water District or were identified in local media since April 10, 2006 and reported health effects they believed were associated with exposure to tap water.

### Questionnaire

A questionnaire was prepared which focused on respondents' health, health of their families, and tap water usage (Appendix A). We interviewed 50 individuals either by telephone or during a home visit. A water engineer was part of each team visiting homes, and they examined point-of-entry and/or point-of-use water filtration systems in the residences.

### Statistical Analysis

We entered and analyzed data in EPI Info 3.3.2. Descriptive statistics are presented.

### Quality Control of data collection

#### *Self-reported symptoms*

This investigation was subject to biases as discussed below and any data analyses should be interpreted with caution. The respondents to this questionnaire were a convenience sample and were not examined by a medical care provider to verify the symptoms they reported.

#### *Local influence*

It was reported to field investigators, that the local chapter of People Concerned about Chloramine (PCAC) had implemented a mass media campaign prior to our arrival. This campaign distributed approximately 10,000 flyers by going door to door and approaching individuals "on the street" and in grocery stores. One report stated an individual with visible skin problems was approached by a member of PCAC in the grocery store and was told the source of their skin problem was the chloramine in the tap water. PCAC has also utilized the local press and public radio spots to mobilize an anti-chloramine campaign. This campaign started prior to April 2006 and continues today. PCAC's flyers and internet website have identified symptoms they claim are associated with the change in water disinfection, including furry tongues, gastrointestinal upset, dermatitis, and respiratory ailments.

Field investigators observed PCAC members coaching survey respondents (many of whom are PCAC members) prior to the meeting on Wednesday. In one case, a PCAC

member was present during the home visit and prompted the respondent to provide specific answers to our questions.

Based on these influences and biases these results can not be interpreted as representing the rates of symptoms, health conditions, or complaints of the overall community.

## **RESULTS**

All interviews were conducted between September 26 and October 10, 2007. At first 74 individuals were contacted by the health department and asked if they would participate in the questionnaire and or home visit. Of those 74 individuals 49 were interviewed. At the request of PCAC the deadline for interviews was extended. This extension allowed PCAC time to contact their membership, requesting their participation in the questionnaire and provided the Vermont Department of Health the opportunity to continue interviewing individuals who wanted to participate in the questionnaire. One person contacted the health department following the extension of the deadline. Of the 50 individuals interviewed, 46 met the inclusion criteria described above. Of the four excluded: three stated their symptoms were not caused by the water and one individual had no symptoms but called because they were concerned. The 46 individuals interviewed represented 36 households. The median age of participants was 55 years (range: 2-88 years) and 29 (63%) were female. Our questionnaire inquired about 11 symptoms and participants were asked to identify if they had experienced any of these symptoms (Table 1). In addition we asked participants what activities, if any, triggered their symptoms (Table 2).

Twenty-five (54%) of the participants stated they had preexisting chronic health conditions. Of these, 6 reported more than one preexisting chronic health condition. The chronic health conditions and the number of participants reporting each condition were as follows: allergies (9), dermatologic problems (6), arthritis (5), asthma (4), diabetes (3), auto immune disorders (3), cardiac history (3), respiratory (2), cancer (2) and other (6). Thirty two (70%) of the participants sought medical attention for their symptoms and 8 (17%) of these individuals received a diagnosis. The diagnoses reported and the numbers of participants with each diagnosis were as follows: psoriasis/eczema (5), fluid in the lungs (1), "writer's rash" (1), and surface eye irritation (1).

We also asked study participants if they had changed their source of drinking water or changed how they used their water. Of the 46 participants: 34 (74%) reported they have changed their tap water habits. These changes included showering outside the home (outside water district's domain); using bottled water for drinking, bathing and or both; lowering temperature of water, or shortening duration of exposure. Twenty three (50%) reported they filter or purify their household water. There were 4 (17%) who reported they use a point of entry filtration system and 16 (70%) who use a point of use filter in their home (such as a carbon filter) and 3 (13%) did not answer the question.

Of the 34 participants who reported they have changed their tap water use habits, 23 (67.6%) reported their symptoms improved or had gone away after they changed their water use. Four (11.8%) reported no change, 3 (8.8%) reported they did not know, and 4 (11.8%) did not answer the question.

Table 1. Symptoms reported by 46 residents of Chittenden County, VT which they believed were associated with exposure to chloramine treated tap water, September and October 2007.

Symptoms	Number of people reporting symptom	%
Dry, flaky, or itchy skin	36	78.3
Rash	28	60.9
Eye irritation	23	50
Cough	20	43.5
Joint aches	14	30.4
Breathing troubles	14	30.4
Skin pain, numbness or tingling	10	21.7
Diarrhea	10	21.7
Headache	9	19.6
Anything else	8	17.8
Fever	2	4.3

Table 2. Activities reported to be associated with symptoms for the 46 residents of Chittenden County, VT who reported symptoms, September and October 2007.

Symptoms	Shower		Bath		Drank		Washed Dishes	
	N	%	N	%	N	%	N	%
Dry flaky itchy skin (N=36)	25	69.4	5	13.9	3	8.3	4	11.1
Rash (N=28)	20	71.4	4	14.3	4	14.3	2	7.1
Eye irritation (N=23)	17	73.9	3	13	1	4.3	0	0
Cough (N=20)	8	40	1	5	5	25	0	0

## ENVIRONMENTAL PROTECTION AGENCY OBSERVATIONS

### CWD treatment and operational practices

Based on information provided by CWD staff, CWD operations are consistent with good operational practices for drinking water treatment. Chloramine dosage, chlorine:ammonia ratio, and pH are near the median for national use. CWD's chloramine concentration of 1.8-2.3 mg/L at its distribution system entry point is well below the maximum residual disinfectant level (MRDL) of 4.0 mg/L (with compliance determined as an annual average); actual exposure for consumers from water delivered by the distribution system will be less. It is important to note that the MRDL for chloramine was set at the MRDL goal (MRDLG); MRDLG was set at a level at which no known or anticipated human health effects occur, with an adequate margin of safety, as is required under the Safe Drinking Water Act amendments.

CWD has conducted additional monitoring beyond that required for compliance determination in order to better understand and control their treatment and distribution processes. CWD has measured no increase in lead levels; this is probably due to their careful switch from chlorine to chloramine as the residual disinfectant. This is part of the system's proactive compliance strategy (preventing violations) rather than a reactive compliance strategy (responding only after violations).

### Observations made during visits to individual households

An EPA staff member was included in each CDC team that visited individual households, to evaluate any treatment that homeowners may have installed. Teams found a mixture of no

treatment, treatment to reduce chloramine level, and treatment that addressed issues other than chloramines. There was a mixture of point-of-entry (whole house) and point-of-use (faucet or showerhead) treatment units. Based on these visits, there do not appear to be any supportable engineering conclusions that can be made concerning a link between treatment and exposure/symptoms.

## **RECOMMENDATIONS**

1. Not having baseline data, the post hoc analysis is difficult especially since there are strong biases with this data. Information provided by this questionnaire should be utilized to explore the design of future prospective studies eliminating biases and allowing for a baseline understanding of the symptoms that pre-exist in the community.
2. CDC and EPA should work with State and local agencies to develop the next steps in addressing the issue of community concerns about chloramine-treated tap water.

## **OMB CLEARANCE**

This was not a research study.

### Self-reported Symptoms and Exposure to Chloramine-Treated Tap Water, Vermont Questionnaire

#### INTRODUCTION SCRIPT

VT State Health Department Staff

Hello, may I speak with \_\_\_\_\_? My name is \_\_\_\_\_, and I am calling from the VT State Health Department. We are working with the Centers for Disease Control and Prevention looking into reported symptoms related to exposure to chloramine treated tap water. We received your name from the Champlain Water District because you have reported symptoms. We would like to ask you some questions about your health, the health of your family, and your tap water usage. Your answers will help us understand what symptoms have been reported since the Champlain Water District switched over to disinfecting their water with chloramine. The questions will take about 20 minutes. May we go ahead now with the questionnaire?

*If no*, is there a convenient time when I can call you back?

Day: \_\_\_\_\_ Time: \_\_\_\_\_ AM / PM

Telephone: \_\_\_\_\_

Hi Guys,

I don't have anything written up - been staying away from this issue (kind of outside the CD realm, eh?). Mlive has had some good articles with timelines and actions taken by city/state government and the health department.

When the Hurley Doc released her evaluation of lead data from their clinic evaluations there was an initial response from our environmental health folks that suggested that their data didn't show what Hurley's did. Unfortunately, after paring down MDHHS data to just kids who likely were exposed to Flint drinking water Eden (Wells) was quoted in one article that there indeed was an increase in kids less than 6 after the switch. (You may want to talk with Eden, Joyce - I've only been privy to what is in the news.) The Public Health Emergency was declared after that - (last Thursday).

Honestly, I wouldn't offer too much information on this issue...(That's my 2 cents)

Hi Tim

As you know, both Scott and I participate in the GLBHI meetings and our next one is coming up tomorrow. Since this Genesee County and Emergency Health Declaration has been very dominate in the national news, I was hoping to get some details from you that I can pass onto the group. If you have a summary or something written up, I can just extract what you want me to from it and tell to the group as well. Thanks!!

Wes - per the EPA request to you, the attachment contains two graphics on childhood blood lead testing in Flint.

Jay - this information likely will be shared with the local health department, if it hasn't been already (there is an MDHHS childhood lead poisoning health educator in the Flint-area), because the MDHHS toxicologists, MDEQ and the county health department spoke last week about the development of standard messaging related to lead in drinking water.

Subject: RE: Director's Office Assignment -- Flint - need update asap

I apologize for the delay in responding more specifically to this assignment, it took some time to review our Childhood Lead Poisoning Prevention program data to see if it might contribute to the understanding of the situation in Flint with their water supply. Here is what we found:

We looked at lead testing results for May 2014-April 2015, which is the 12 month time frame just after Flint started drawing their water from the river (water source changed in April 2014). We compared lead testing rates and lead testing results to the same time frame for the previous 3 years, to see if there were any patterns that suggested that there were increased rates of lead poisoning after the water supply was switched. Per the attached charts -

- \* Lead testing rates remained about the same from year to year (chart on the right).
- \* There was a spike in elevated blood lead tests from July-September 2014 (chart on the left,

gold line).

\* However that pattern was not terribly different from what we saw in the previous three years, especially in 2011-2012 (we are working with our Epidemiologist to statistically verify any significant differences).

\* We commonly see a 'seasonal effect' with lead, related to people opening and closing windows more often in the summer, which disturbs old deteriorating paint on the windows, sills and sashes. Window fans frequently blow and spread the lead dust from the deteriorating paint to other parts of the room/house. We suspect that the summer data spike may be related to this effect.

\* If the home water supply lines and/or river water were contributing to elevated blood lead tests, we expected that the increased rates would extend beyond the summer, but they drop quite a bit from September to October, stayed low over the winter, and are just starting to tail up again in the spring of 2015.

So upon review, we don't believe our data demonstrates an increase in lead poisoning rates that might be attributable to the change in water source for Flint. We recognize that lead exposure via the water is only a small piece of what may be happening for families in Flint, however, we hope the information is helpful.

Subject: RE: Flint - need update asap

There's an article from the metro times I located:

<http://www.metrotimes.com/Blogs/archives/2015/07/14/flint-family-finds-hazardous-waste-levels-of-lead-in-its-tap-water>

Based on this it sounds like at least one family might have had a child with elevated lead blood levels, which might or might not have come from the water. Sounds like the issue is old lead service lines, but there seems to be some difference of opinion on appropriate testing methods.

I'd send this over to Linda Dykema, Wes Priem and Nancy Peeler for their comments.

DEQ has jurisdiction over municipal water supplies, but we do have a program to follow-up on children with elevated blood lead levels, so I think it would be appropriate for the folks above to discuss the situation and recommend any action.

Mark

I'm frustrated by the water issue in Flint. I really don't think people are getting the benefit of the doubt. Now they are concerned and rightfully so about the lead level studies they are receiving from the DEQ samples. Can you take a moment out of your impossible schedule to personally take a look at this? These folks are scared and worried about the health impacts and they are basically getting blown off by us (as a state we're just not sympathizing with their plight).

-----Original Message-----

From: Mona Hanna-Attisha  
Sent: Thursday, August 27, 2015 1:31 PM  
To: 'Johnson, M.D., Gary'; Schacher, Andrew (aschacher@gchd.us); 'Valacak, Mark'  
Cc: Hallwood, Dawn; Henry, James  
Subject: RE: Emailing: Lead Prescription

It was a pleasure meeting with Andrew today regarding the lead prescription program. As a follow-up:

- 1) We will work with Andrew and our lab and social worker to create an automatic electronic referral system for all kids with elevated lead levels. The referral will go to Andrew so that he can enroll them in his program.
- 2) Please use Hurley and MSU as a resource for lead programming, lead research, lead grant-writing, lead education, lead advocacy, lead whatever. Through Hurley, we have the providers, the patient population and the interest to work on pediatric public health issues. We clearly recognize the devastating and life-long impact of this entirely PREVENTABLE condition. Through MSU, we have the additional research capacity and the collaboration with the MSU Public Health Program (potential PH students and/or research hires interested in lead). We are eager to collaborate on this shared goal. Personally, I have a background in environmental health and this topic ideally merges the disciplines of pediatrics and public health.
- 3) Lastly, this may not be under the health department's jurisdiction; however, I don't understand why it wouldn't be - I am concerned about the potential for an increase in childhood lead poisoning secondary to the Flint drinking water situation. Flint had Safe Drinking Water Act violations for trihalomethanes after switching water sources. They dramatically increased their chlorine after switching sources. That changes the oxidation reduction potential and allows the metal of the pipe to go into solution. This is strikingly similar to what happened in Washington DC that resulted in significant childhood lead poisonings. It took about 2 years of lead leaching and exposure to result in elevated blood lead levels measured in 2003 as reported by CDC ([http://www.cdc.gov/nceh/lead/blood\\_levels.htm](http://www.cdc.gov/nceh/lead/blood_levels.htm)). I have an EPA colleague who worked on the DC issue and is aware/interested in the Flint issue.

Article about Flint's lead levels in water:

[http://www.deadlinedetroit.com/articles/12697/scary\\_leaded\\_water\\_and\\_one\\_flint\\_family\\_s\\_toxic\\_nightmare#.Vd8yWVKVP9d](http://www.deadlinedetroit.com/articles/12697/scary_leaded_water_and_one_flint_family_s_toxic_nightmare#.Vd8yWVKVP9d)

I know this has been a controversial issue, but it would be great if we can collaborate to prevent some of the same issues that happened in DC. Our children already significant pre-existing challenges (toxic stress/adverse childhood events), avoidable lead exposure should not be an additional burden. I would be more than happy to meet to discuss/brainstorm additional solutions.

Thanks again and looking forward to additional collaborations! Mona

<<Lead Prescription.pdf>> Mona--

Please read over the attached letter with the prescription. We sent you a similar letter on May 5th, hoping the pediatric residents would participate in the community outreach portion of this grant funded Childhood Lead Poisoning program.

Please re-consider having the pediatric residents participate in this community prescription program for children whose venous lead levels are between 5-14 as stated in the letter.

Please contact Dawn Hallwood via e-mail or phone letter as stated in the letter.

We would greatly appreciate your participation and the resident's participation.

Thank you very much.

Gary Johnson

Nick, thank you for your phone call yesterday. These past couple months have been a blur, and I wanted to go back and see exactly when I first communicated with the state.

My first contact with MDDHS was with Karen Lishinski on Sept 8 (she had come to Hurley a year prior to give a grand rounds on lead). I called her and asked her about the lead concerns and she said that the state had looked at the blood lead data and that there was a possible increase, I asked her for the data over the phone, she said ok, but then I never heard back from her. I sent her the below email the day after.

And then my first communication with Bob Scott was on Sept 16 asking for the data again.

Hi Karen, Hope you are well. Thanks for speaking with me yesterday. Since we spoke, we have been able to run a report on all the blood lead levels in our peds clinic since before and after the water switch. Our research team is still analyzing the data, but it appears that there is an increase. I will share more once the analysis is complete.

Can you please share the MCIR data that you mentioned. That would be most helpful since the sample size is much greater. If there is someone else I should contact regarding the MCIR data request, please let me know.

Thanks! Mona

The Michigan Department of Health and Human Services has been, and continues to be, committed to full disclosure of information regarding the city of Flint and blood lead levels. To suggest otherwise is not consistent with how we have responded.

When initially looking at the citywide and county elevated blood lead level numbers, they did not indicate anything other than seasonal fluctuation. It wasn't until the Hurley report came out that our epidemiologists took a more in-depth look at the data by zip code, controlling for seasonal variation, and confirmed an increase outside of normal trends. As a result of this process, we have determined that the way we analyze data collected needs to be thoroughly reviewed. Our after action report will help determine how we conduct this process in the future.

Our department is focused on ensuring that appropriate case management and follow up is occurring in Flint. Summary reports outlining blood lead level testing are posted online on a bi-weekly basis, and we are working closely with local partners to fulfill data requests as we receive them.

Regarding the FOIA, Mr. Edwards received all of the requested documents, with personal information redacted, on Friday, December 18.

**Subject:** RE: data aggregated by year

Hi Kristi:

I've talked with our epis and we cannot provide the aggregate by year starting with q2 annually due to the DNS cells then being compromised and privacy concerns with identifiable information.

If you would still like to pursue the IRB route, please let us know and Bob and assist you through that process.

Best,

Bob,

Thank you for the count data by quarter.

Is it possible for you to aggregate it by year starting with q2 annually? So the data are comparable?

Thanks!

Kristi

**Subject:** RE: Regarding data request

Yes,

I am looking for the quarterly numbers behind the percentages on the chart Jennifer shared. I was told I need to sign a release – does this come from you Jen? To get the quarterly counts, in the meantime if you can aggregate the counts annually beginning with q2 that will help.

Summary numbers are fine for the second request, just looking to see what the investigation and remediation/clearance participation rates look like for those children identified with lead poisoning for communities receiving funding.

If that makes sense, if it doesn't maybe we need to chat over the phone.

Thanks

Kristi

P.S. Jen can you forward me the contact info for the lead on toxicology team and special task force for Flint?

**Subject:** Regarding data request

Ms. Tanner,

I'm requesting clarification on a couple of points regarding your request below:

- Regarding “Actual numbers behind the updated analysis/chart and percentages,” more than one set of charts & data were produced over the last couple of weeks. Can you be more specific on what you're referring to—maybe title and date?
- Regarding data on “investigation, risk assessment, abatement and/or clearance,” I assume you're not asking for any individual or identifiable data, is that correct? Summary numbers only?

Thanks,

Bob Scott

**Subject:** RE: Info attached

Thanks for the follow-up Jennifer.

Per our discussion, I am interested in obtaining the following information

Specific to Flint:

- The logistic regression model discussed in the conference call
- Actual numbers behind the updated analysis/chart and percentages
- Contact information for the lead toxicologists working on the prediction modeling in Flint.

- Contact information for the lead contact for the Special Workgroup EPA/DEQ/MDHHS to address lead in Flint.

Communities that receive funding for lead poisoning prevention (Flint, Detroit, Grand Rapids, Hamtramck, Highland Park, Jackson, Lansing, Muskegon/Muskegon Heights and Saginaw):

- Any data that the state collects on investigation, risk assessment, abatement and/or clearance.

Thank you!

Kristi Tanner

I appreciate the reply.  
I have one further question.

In this statement - "the increase appeared to be consistent with the routine seasonal fluctuation seen in the summer months."

BUT according to the data collected and notes provided by Cristin Larder on July 28, 2015 it specifically says:

"Based on the results depicted in Figure 3 positives tests for EBLL were higher than usual for children under age 16 in the City of Flint during the months of July, August and September, 2014."

While I understand a sample size in July can't reflect a direct correlation to the water switch - comparing summer 2014 to previous years AND accounting for seasonal variance - Larder wrote "there does appear to be a high proportion of EBLL last summer than usual"

I guess I am just confused how this report in July is consistent with what the department is saying now?

**Subject:** flint water  
**Attachments:** Rapid Proposal Final.pdf

Robert L. Scott  
Childhood Lead Poisoning Prevention Program  
Michigan Department of Health & Human Services  
(517) 335-8178  
fax (517) 335-8509

**Overview:** Flint, MI, is currently suffering from a “perfect storm” attributable to out-of-control corrosion of its potable water distribution system. The corrosion is undermining water affordability for residents, financial viability of city government, water aesthetics, and hygiene/sanitation as revealed in local and national news reporting. We *hypothesize* that these circumstances will also create severe chemical/biological health risks for Flint residents, including elevated levels of lead and opportunistic premise plumbing pathogens (OPPPs) in drinking water. Preliminary data collected from a home of a lead poisoned child in Flint has revealed extraordinarily high levels of lead, with average concentrations over 20 minutes of water use exceeding 2,000 ppb (> 200 times the World Health Organization allowable levels for lead in potable water).

The main *objectives* of this research are to: 1) compare levels of chlorine, iron, fecal indicator bacteria, OPPPs, and corrosion-inducing bacteria present in water mains of a distribution system with uncontrolled corrosion (Flint) versus surrounding cities/counties still using non-corrosive water, 2) profile OPPPs occurrence in hot and cold potable water systems at these same locations, and 3) determine if there is evidence of elevated lead in Flint homes, and, if so, forensically determine the links to iron corrosion. Our team is uniquely qualified to do this work given our just published peer reviewed research on this subject and our extensive collaborations with key stakeholders in Flint.

**Intellectual Merit:** The four elements of the “perfect storm” currently undermining water quality (and possibly public health) in Flint include: a) chronic underinvestment in water infrastructure, b) under-appreciation of the role of corrosion control in sustaining urban potable water systems, c) increased corrosion due to higher chloride in Flint’s new source water, and d) failure to appropriately monitor for lead and OPPPs. The latter two factors are amongst the most important health problems arising in modern potable water systems. The high rates of corrosion occurring in Flint are releasing high levels of iron to water and consuming chlorine disinfectant, which our most recent laboratory testing has indicated will increase lead release to water and growth of OPPPs in cold and hot water plumbing systems. The unfortunate but unique opportunity offered by Flint’s current situation, provides an ideal opportunity to field test our recent discoveries regarding potentially adverse consequences of iron corrosion on chemical/microbiological water quality at field rather than laboratory scale.

**Broader Impacts:** This RAPID grant will directly assist residents of Flint in assessing the current safety of their potable water supply. If the results support recently issued public assurances regarding safety of water, the current problems in Flint can be considered mainly of aesthetics and perception due to very distasteful or discolored water. However, if sampling reveals widespread problems, the public will learn of the potential health threat. Since elements of the “perfect storm” afflicting Flint are occurring at some level in many other financially stressed U.S. urban centers with decaying drinking water infrastructure, this Rapid Response Research (RAPID) grant also provides an unprecedented opportunity to advance fundamental scientific and practical understanding at this emerging nexus of infrastructure-environmental engineering-public health. The general results and approach used herein can inform residents and managers of other U.S. cities, who will soon be dealing with similar problems associated with failing potable water infrastructure exacerbated by increased chloride in water due to excessive use of road salt and rising sea levels. The research also provides a compelling case study in *Citizen Science*, since the experiences of Flint parents in monitoring their children’s health and environmental exposures was a trigger for our preliminary testing, and Flint consumers will be scientifically empowered by participating in fundamental research relying on collection of samples from their homes and residences. There is also a social justice implication of the research, in that these results can help inform the current policy debate regarding strategies for dealing with cities that have gone bankrupt, as well as the discussion of access to safe and affordable drinking water as a basic human right.

# RAPID: Synergistic Impacts of Corrosive Water and Interrupted Corrosion Control on Chemical/Microbiological Water Quality: Flint, MI

## 1. Problem Statement and Objectives

Flint, MI, is currently suffering from a “perfect storm” due to out-of-control corrosion of its potable water distribution system, undermining the well-being of the community including water affordability for residents, financial viability of city government, water aesthetics, and hygiene/sanitation.<sup>1-13</sup> Flint’s problems began in April 2014, when emergency managers hired to deal with the city’s fiscal crisis determined they could save money by switching to a local river water source as opposed to purchasing water from Detroit (Table 1). As a result of the change in source water, the Larson Iron Corrosion Index was raised from 0.54 (low corrosion) to 2.3 (very high corrosion) and the chloride to sulfate mass ratio (CSMR) index for lead corrosion increased from 0.45 (low corrosion) to 1.6 (very high corrosion). Concurrently, the managers and state primacy agency attempted to save even more money by not feeding an orthophosphate corrosion inhibitor to the water supply (Table 1).

Not surprisingly, the combined effect of more corrosive water and removal of the corrosion inhibitor unleashed unprecedented corrosion in the water main distribution system with cascading personal, economic, and public health consequences to Flint as tracked by news reports and mandatory chemical/biological monitoring of water in the distribution system mains.<sup>1-14</sup> *Our recent research also predicts that these circumstances will potentially create severe chemical/biological health risks for residents, due to impacts on water within building (premise) plumbing systems that include elevated levels of lead and opportunistic premise plumbing pathogens (OPPPs).*<sup>15-18</sup> Because the factors impacting Flint are also occurring at some level in many other financially-stressed U.S. urban centers with decaying drinking water infrastructure, this *Rapid Response Research (RAPID) grant provides an unprecedented opportunity to advance fundamental scientific and practical understanding at this emerging nexus of infrastructure-environmental engineering-public health.* We view August-September 2015 as the ideal time to first sample in Flint, as more than 16 months of uncontrolled corrosion have occurred and the water remains near its seasonal peak temperature, maximizing the likelihood of serious problems with lead and OPPPs if they exist.

*Our key hypothesis is that the rapid corrosion of iron water mains will dramatically increase lead release to water and growth of OPPPs as measured in consumers’ homes.* Mechanistically, higher iron corrosion produces both higher iron in water and lower levels of free chlorine, both of which dramatically increased lead release and OPPPs regrowth in our just published laboratory research utilizing simulated distribution systems.<sup>15-19</sup> The *main objectives of this research* are to: 1) compare levels of chlorine, iron, fecal indicator bacteria, OPPPs, and corrosion-inducing bacteria present in water mains of a distribution system with uncontrolled corrosion (Flint) versus controlled corrosion in surrounding cities/counties still using non-corrosive Detroit water, 2) profile hot and cold potable water systems at the same sampling locations in #1 for OPPPs, and 3) determine if there is evidence of elevated lead in Flint homes, and, if so, forensically determine the links to iron corrosion.<sup>15, 17-20</sup> The unfortunate but unique opportunity offered by Flint’s current situation provides an ideal opportunity to field test our recent discoveries regarding adverse consequences of iron corrosion on OPPPs and lead concentration at the tap.

**Table 1.** Water quality parameters for drinking water supplied in Flint, MI before and after the April 2014 switch

Parameter	Before <sup>1</sup>	After <sup>2</sup>
pH	7.38	7.61
Hardness (mg/L as CaCO <sub>3</sub> )	101	183
Alkalinity (mg/L as CaCO <sub>3</sub> )	78	77
Chloride (mg/L)	11.4	92
Sulfate (mg/L)	25.2	41
CSMR <sup>3</sup>	0.45	1.6
Inhibitor (mg/L as P)	0.35	NONE
Larson Ratio <sup>4</sup>	0.5	2.3

<sup>3</sup>A measure of corrosivity to lead; a value > 0.5 is a critical trigger [10]

<sup>4</sup>A measure of corrosivity to mild steel and iron; corrosion rate increases linearly with Larson Ratio [8]

## 2. Review of Local Events and Intellectual Merit

**Local Impacts.** After the switch of water sources, residents of Flint were immediately subject to an outbreak of corrosion-related drinking water problems including flooding from large water main breaks and reported health ailments.<sup>1-6</sup> General Motors, a prime customer of the water system, reported that the new water was severely corroding auto parts on its assembly line and had to begin importing water, costing the city \$400,000 in lost revenue.

<sup>9</sup> The PI was also alerted by an Environmental Protection Agency volunteer to a case of childhood lead poisoning in a Flint home that was certified as “lead free.”<sup>4</sup> Samples collected from the home exhibited classic “red water” that is occurring throughout the city (Figure 1), along with the highest sustained levels of lead in drinking water that we have encountered in over 25 years of research on the subject. Specifically, in 30 samples collected over a period of 25 minutes flushing at the kitchen faucet, lead concentrations averaged over 2,000 ppb and were as high as 13,000 ppb. For perspective, these levels are more than 200-1,300 times higher than World Health Organization standards (10 ppb) and several even exceeded the EPA criterion for “hazardous waste” of 5,000 ppb Pb. The city has also reported unspecified economic losses due to water main breaks and water losses through leaks.<sup>3,7,11-12</sup>

Figure 1. Drinking water samples collected from home of a child who was lead poisoned by Flint water.

The corrosion problems have also had cascading impacts on health parameters monitored under federal regulations. Because the corrosion is rapidly consuming chlorine disinfectant in the water, the city violated EPA limits for *E. coli*.<sup>5-6</sup> The detaching iron rust also has the potential to expose consumers to other contaminants that pose a serious public health risk, including arsenic<sup>14</sup> and lead that have accumulated in pipes or sorbed to iron surfaces.<sup>15-16</sup> Health effects reported by residents since the switch include skin rashes, hair loss, vomiting, copper poisoning, and the one confirmed case of lead poisoning.<sup>2-4,7,13</sup> However, the relatively small number of cases reported to date almost certainly underestimates the full extent of the problem. In response to the sampling showing high lead, the authorities who made the decision to switch water sources and stop adding corrosion inhibitor publicly stated that “anyone who is concerned about lead in the drinking water in Flint can relax” and that the water is safe,<sup>44</sup> but refuse to sample consumers’ water without pre-flushing the plumbing for at least 5 minutes the night before sampling. The latter practice is known to miss lead in water problems.

We are also concerned about possible health effects that have not yet been investigated. For example, in March 2015 Region 5 EPA was provided reports of higher incidence of Legionnaires’ disease associated with bacteria growth in premise plumbing in the Flint area.<sup>21</sup> Legionnaires’ disease has recently been acknowledged to be the primary source of waterborne disease outbreaks (and associated deaths) in the U.S.<sup>22</sup> Despite that acknowledged risk, there is currently no required monitoring for this important pathogen in consumers’ homes, where it proliferates and can lead to human exposure and infection in showers.<sup>22</sup>

**Intellectual Merit.** The four elements of the “perfect storm” currently undermining water quality (and possibly public health) in Flint include: a) chronic underinvestment in water infrastructure, b) under-appreciation of the role of corrosion control in sustaining urban potable water systems, c) increased corrosivity of water sources nationally due to rising chloride levels from anthropogenic pollution and/or rising sea levels, and d) failure to appropriately monitor for lead and OPPPs, which are two of the most important modern-day public health problems arising in building plumbing systems.

- a) **Chronic Underinvestment in Water Infrastructure.** A large fraction of the nation’s potable water infrastructure is on the verge of failure, and this problem has been repeatedly voted by

members of the American Society of Civil Engineers (ASCE) as the most urgent societal infrastructure challenge with an overall condition grade of “D”.<sup>23,24</sup> Many water main distribution systems are reaching the end of their design lifetime (60-95 years), with water main breaks currently at a rate of 240,000 per year nationally and rising.<sup>25,26</sup> Aside from obvious public health implications associated with compromised delivery of uncontaminated drinking water to the tap, failure events can cause property damage and water loss through leaks.<sup>27</sup> Like many post-industrial manufacturing centers, Flint has a very large potable distribution system constructed to sustain a large consumer and industrial base that no longer exists. The projected cost to upgrade the distribution system is \$1.5 billion dollars,<sup>28</sup> which would translate to an unbearable cost of \$50,000 per existing customer in Flint.<sup>28</sup>

**b) Under-appreciation of the role of corrosion control in sustaining potable water systems.**

Estimates by ASCE, the American Water Works Association (AWWA), the Environmental Protection Agency (EPA), the Water Infrastructure Network (WIN), and the National Academy of Corrosion Engineers (NACE) suggest that direct costs of water pipeline corrosion range between \$8 billion - \$36 billion annually and indirect costs are much higher.<sup>27</sup> Leaks result in 7 billion gallons of lost water each day with associated revenue losses of  $\approx$  \$3 billion per year for U.S. utilities.<sup>29</sup> Problems with leaking potable water plumbing systems in buildings (i.e. premise plumbing) also cost consumers billions of dollars each year.<sup>30,31</sup> Water utilities can reduce costs of potable water system corrosion and extend the lifetime of these invaluable assets by adding corrosion inhibitors, such as orthophosphate, to the water. Prior research using a relatively low corrosivity source water determined that each dollar invested in corrosion control produced more than \$5 dollars in financial savings due to reduced corrosion damage and extended lifetime of pipeline infrastructure.<sup>32</sup> In Flint, the short-sighted decision to reduce chemical costs by removing the corrosion inhibitor and introducing corrosive water to the system may have produced tens if not hundreds of millions of dollars in corrosion damages to its existing potable water distribution system. We are also aware of many other utilities that are cutting back on their corrosion inhibitor doses due to cost-cutting pressures.

**c) *Increased corrosivity of water sources nationally due to rising chloride levels from anthropogenic pollution and/or rising sea levels.*** Chloride levels in drinking water are rising nationally in surface water due to use of road salt and seawater intrusion in coastal regions. Road salt use in winter has risen to 137 lbs per year for every American, with a doubling of salt application from 1990 to 2014 (10 vs. 22 million tons) associated with a doubling of chloride levels in northern U.S. waters as monitored by the USGS.<sup>33,34</sup> There is documented concern about the damage of salt application to infrastructure such as roads and bridges,<sup>35</sup> but rising salt levels in the Potomac (due to road salt) in 2015 also have triggered a spike in consumer complaints of red or brown water from their main distribution system.<sup>36,37</sup> and we are currently working with a utility in Brick, NJ that is reporting high lead in consumers’ water due to higher chloride from rising sea levels near their intake as well as road salt use.<sup>38-40</sup> The higher corrosivity of water in Flint due to higher chloride (Table 1), therefore provides an interesting “acute” case study of higher chloride impacts that can shed light on these important national trends.

**d) *Failure of utilities and regulatory agencies to take responsibility for the two most important modern day public health problems arising in building plumbing systems (i.e., lead and OPPPs).*** For ten years EPA has acknowledged that utilities are collecting samples in a manner that “misses” worst case lead in water,<sup>41-43</sup> and to date they have not required utilities to change monitoring practices to better reveal problems. The EPA LCR sampling protocols have been under review since 2008 and the EPA is expected to issue new requirements sometime in 2016. Hence, sampling in Flint without “pre-flushing” to reduce lead, as revealed by the EPA

volunteer,<sup>4</sup> could inform modifications to the EPA LCR. Likewise, EPA's current regulations on *Legionella* consider only levels that might be present in water leaving the treatment plant, where it is least likely to be present, and do not yet require monitoring at the point of entry into homes or within buildings where *Legionella* is most likely to be present and cause disease.<sup>21</sup> Our proposed sampling for *Legionella* at these locations can therefore inform future regulation and distribution system management policies for dealing with this emerging public health risk.<sup>19,22</sup>

In summary, this proposed RAPID grant characterizing the occurrence of chemical/biological problems in Flint, MI homes explores a newly emerging nexus between degrading infrastructure-environmental engineering-public health that can provide insight into problems facing many cities all over the United States.

### 3. Approach

The **RAPID grant objectives** will be achieved through three phases of sampling, using analytical methods in routine use by the project team, as follows:

**Phase 1. Compare levels of chlorine, iron, fecal indicator bacteria, OPPPs, and corrosion-inducing bacteria present in water mains of a distribution system with uncontrolled corrosion (Flint) versus controlled corrosion in surrounding cities/counties still using non-corrosive Detroit water.** A team including the PI and at least 3 graduate students will travel to Flint and stay 3-7 days in mid-August 2015, to collect 8 distribution system samples from surrounding cities still using Detroit water, and to also sample Flint's 8 distribution system monitoring locations (Figure 1). We will stay in two hotel rooms, one located in Flint and one in a surrounding location on Detroit water, to conveniently collect samples for free chlorine at 2 hour intervals expected to correspond to lowest and highest daily demand. All of these analyses will be conducted using standard methods with the exception of testing for corrosion-inducing bacteria which will be conducted with Biological Activity Reaction Test (BART) kits. BARTs are standardized colorimetric culture kits that are semi-quantitative and include testing for Sulfate-Reducing Bacteria (SRB), Heterotrophic Aerobic Bacteria, Heterotrophic Anaerobic Bacteria, Denitrifiers, Slime Forming Bacteria, and Acid Producing Bacteria (APB). It is hypothesized that the Flint waters will have much lower levels of free chlorine, higher levels of iron, corrosion-inducing bacteria, and fecal indicator bacteria than samples collected from locations still on Detroit water.

**Phase 2. Profile building hot and cold water plumbing systems for OPPPs at the same sampling locations used in Phase 1.**

Protocols used previously to sample for a suite of OPPPs and two host protozoa<sup>18,20</sup> in hot and cold water from taps and biofilms of buildings using quantitative Polymerase Chain Reaction (q-PCR) analysis, will be used to profile the hot and cold water systems for human pathogens at the same locations tested in Phase 1. Specifically, target microbes including *Legionella pneumophila*, *M. avium*, *P. aeruginosa*, *Acanthamoeba* and *Vermamoeba vermiformis* will be quantified by qPCR, and hot water samples will be cultured for *Legionella* and

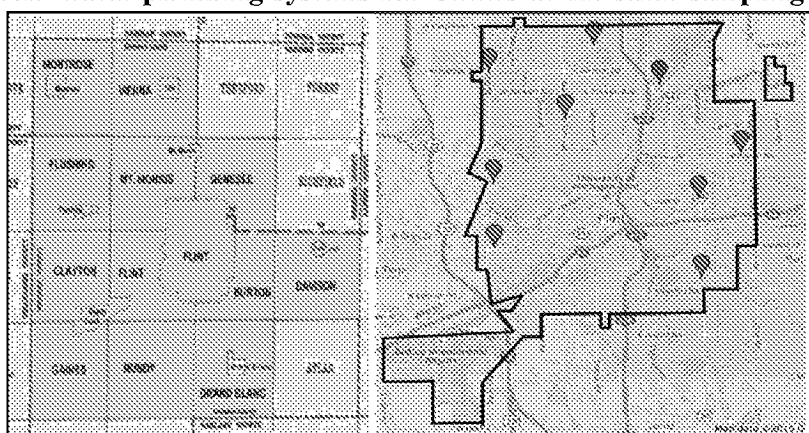

Figure 2. Blue areas indicate areas served by Detroit water before the city of Flint switched (left) and distribution of Flint monitoring stations (right).

*Mycobacteria* from each location. Samples collected for microbial analysis and fecal indicator bacteria (Phase 1) will be overnight shipped from Michigan via cold-pack using protocols developed by the project team on NSF Project CBET-1438328. In Flint, for comparison, at least three additional privately owned homes will be sampled for OPPPs using the same protocols as for the public buildings.

**Phase 3. Determine if there is evidence of elevated lead in Flint homes.** We will coordinate with several local citizen groups including the American Civil Liberties Union (ACLU), Concerned Pastors for Social Action, and others to sample homes in Flint for lead in water. We will prepare 300 sampling kits with instructions, to collect water samples according to standard EPA LCR protocols for shipment to community groups. Each kit will contain three bottles to sample water after standard water stagnation (> 6 hours) at typical-use flow rates, including 1) first draw standard LCR (1 liter), 2) 45 second flushing 0.5 liter sample (targeting the lead service line, if present), and 3) 5 minutes of flushing 0.25 liter sample. Each kit will have a sample form to fill out information including 1) name of person collecting sample, 2) age of home (if known), 3) mailing address of home sampled, and 4) date of sample collection. A phone number will be provided of a member of the Virginia Tech team, who can answer questions that residents have about the instructions (if any). Residents will be instructed to return the sampling kits to a centralized location according to procedures that best suit each citizen group. The sample kits will then be put into boxes provided by the project team, and shipped back to Virginia Tech with the postage paid by the RAPID grant. Assuming a response rate of 33%, 300 samples ( $= 0.33 \times 300 \times 3$  bottles per kit) will be analyzed for lead, iron, copper and other constituents using the PI's Inductively Coupled Plasma Mass Spectrometer (ICP-MS). All returned kits will be analyzed, and results will be summarized in a letter to each consumer to be sent out within 1 month of receiving the samples. We will provide a phone number of a senior research scientist (Dr. Jeff Parks) that the residents can call to ask questions about their results if they have them and compile the results in a summary form for research publications and public outreach.

#### 4. Project Management and Prior NSF Support

The senior project team (Edwards, Pruden, Falkinham) has collaborated together extensively and has a strong record of success. They will be assisted in leading the project by Dr. Brandi Clark (former NSF graduate fellow) who is a recent graduate of Virginia Tech (2015). Edwards and Clark will coordinate the Flint site visit and the lead survey. Another NSF graduate fellow (Emily Garner, formerly Emily Lipscomb) who is currently co-advised by Pruden/Edwards will assist the Flint site visit team and coordinate biological sample analysis and shipments. Pruden and Falkinham will assist in the data analysis, interpretation and write-up of the results.

#### 5. Broader Impacts

In addition to improving practical and scientific understanding related to two of the most important problems associated with potable water and health in consumer homes (i.e., lead and OPPPs), this RAPID grant will directly assist residents of Flint in assessing the safety of their potable water supply. The results and approach used herein can inform residents and managers of other U.S. cities who will soon be dealing with similar problems associated with failing potable water infrastructure and increased corrosivity of potable water. Phase 3 of this research also provides an interesting case study in *Citizen Science* as a tool to advance scientific understanding, policy, and public health, because consumers are actively collecting samples from their homes and will be participating in National Science Foundation research. The work also has social justice implications, as the plight of Flint residents has already received national attention, and results can inform the current debate regarding access to safe, affordable water as a “right” for Americans in U.S. cities.

**To:** Scott, Robert L. (DHHS); Lishinski, Karen (DHHS); Cooper, Jessica (DHHS); Emily Houk R2P (emily@r2pconsultants.com); Lounds, Elizabeth (DHHS)  
**Subject:** documents plus THANKS  
**Attachments:** Blood Lead Level (BLL) Quick Reference for Primary Care Providers.pdf; Lead Screening & Testing for Safe, Healthy Michigan Kids.pdf; Parent Handout Is Your Child Safe From Lead Poisoning.pdf; Pregnant and Nursing Mothers and Lead.pdf

OK, FYI, attached are the final documents that were posted on our website today by Jeff Ellsworth. I believe they will be referenced in the press conference tomorrow. Yes, Gov is holding a big press conference tomorrow, watch your email, stay tuned, (online TV?). I think it is in Flint, but don't quote me on that.

Angela talked in a meeting today about our toolkit and plans to introduce it later this month since this pesky lead problem existed before and continues to exist both in Flint and statewide, great that there will be continued attention. These attached documents will be kind of a preview.

Some thank you's -

Emily, many thanks for the last minute speedy work on the breastfeeding document, and just plain making the rest of the materials look great, and set all of us (CLPPP and MDHHS) for a big push later this month!

Karen, thank you for finding that research that made the breastfeeding document easy to create, and for tracking what is happening in Flint and keeping the day to day work going for all of the other kids.

Jess, you are a rock of stability with your headphones on, plugging away at all that data which has become so incredibly important in the Epi analysis, and in helping people to get a picture of what is happening in Flint and statewide.

Bob, you've pushed so much through in a short period of time, responding with such grace and kindness with each request, even the ornery ones. Thank you for your positive attitude and great work, the Department TRULY couldn't do it without you!!!

And Beth – you just keep laughing at me as I flit around, which is good, the humor is needed!

Thank you, everyone!

Nancy

# Lead Screening & Testing For Safe, Healthy Michigan Kids

A program with PREVENTION at its core!

Lead poisoning remains a health hazard for children in communities across Michigan. With proven links to biological and neurologic damage, lead exposure is a major factor in lifelong learning, aggression, and behavior problems. These challenges have downstream impacts on the state's budget through higher special education and incarceration costs, as well as diminished productivity and lost tax revenue.

Effective screening and testing programs offer a clear, low-cost way of identifying and promptly addressing cases of lead exposure.

Michigan's Childhood Lead Poisoning Prevention Program (CLPPP) concentrates on **SURVEILLANCE**, **NURSING ASSISTANCE** and **EDUCATION** to ensure that parents, medical professionals and policy makers have the information they need to identify, assess and care for Michigan's children.

## Surveillance

CLPPP provides a statewide lead monitoring system that requires elevated blood lead results to be shared among state and local agencies, and for aggregated data to be reported to the Legislature annually.

155,919

Blood Lead Level (BLL) results processed in 2014 through Michigan's surveillance system.

45

Different reports prepared for stakeholders like health departments, lead abatement programs and Legislature each year

## Nursing Assistance

Technical assistance that ensures health care providers are supported in managing and coordinating services to children with elevated blood lead levels.

1,900 annual calls

20%

of children less than six years old were tested for lead poisoning in 2014

5,058

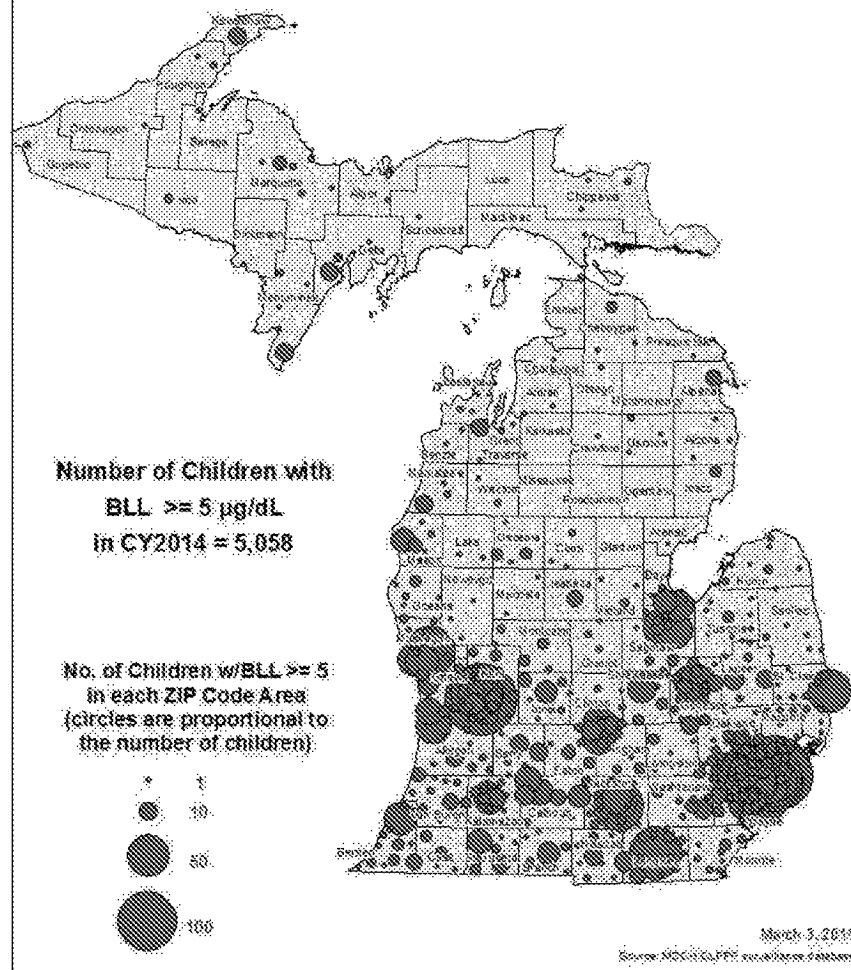

children tested who were identified with blood lead levels  $\geq 5$  ug/dL (3.5%)

## Education

Statewide community outreach to parents, health care providers, child care providers, public schools, and homeowners/tenants.

- prevention focused
- aimed at awareness
- designed for in-home support for families

Children less than Six years of Age  
with Blood Lead Levels (BLL)  $\geq 5$   $\mu\text{g}/\text{dL}$   
Calendar Year 2014

Childhood lead poisoning is preventable.

In 2015, boosting PREVENTION education  
and TARGETED IN-HOME INTERVENTIONS like safe cleaning  
techniques and temporary fixes is our #1 goal.

**Subject:** For MIALSH members - 2013 CLPPP Data Report

**Attachments:** 2013 CLPPP Data Report PRELIM.pdf

Hello all,

Please see attached PRELIMINARY report. For the final report, the numbers will change slightly but the percentages probably won't.

Blood lead testing is down slightly from last year (which has been a recent trend). Elevated blood lead levels are down by number and percentage, as they have been almost every year since we started tracking them.

Let me know if you have questions.

Bob

Robert L. Scott  
Childhood Lead Poisoning Prevention Program

See attached, new FOIA. I can see the assignment, but not the actual request (may be something funky about my iPad and what it does or doesn't show?). Can you all see the actual FOIA request in what I am forwarding? I'll try to access later on my laptop. But if you all can start looking at this now, see if you have any questions or concerns, etc, I would appreciate it!

Nancy

Hi Nancy,

This is a new FOIA request from Edwards. Please respond to the FOIA email address below and copy Paula Anderson.

Brenda said to feel free to give her a call, and it can be outside of work hours. Thanks.

**From:** Marc Edwards <edwardsm@vt.edu>  
**Sent:** Sunday, November 01, 2015 1:00 PM  
**To:** MDHHS-FOIA  
**Subject:** FOIA Request records on blood lead studies and associated discussion in Flint

I am requesting documents (e-mails, notes, reports, etc) related to blood lead studies on children in Flint Michigan 2014-present.

Robert Scott and Karen Lishinski of DCH would know about these documents, and who else might know about them. In particular, I am interested in:

- 1) all documents and e-mails related to a "study" done by DCH that was repeatedly cited by MDEQ, as showing there was no problem with Flint's children, but acknowledging that there was a "spike" in blood lead in 2014 summer
- 2) communications between MDEQ and DCH and others about this original study and presentations thereof
- 3) all documents about the study of Mona Hanna-Attisha, including the extensive attempts by the State to discredit her work. Again, MDEQ and others were involved in those discussions.
- 4) all documents about finally verifying Ms. Hanna-Attisha's study
- 5) all documents about Ms. Hanna-Attisha's study to the present day, including any e-mails to the U.S. CDC or ATSDR about the work.
- 6) all documents about my work, and my attempt to get the blood lead data from DCH

I would submit the FOIA through the DCH web-link, but that link does not work.

Marc Edwards

**Subject:** Re: CLPPP Grant

Sure - I thought Courtney had already addressed this on one of our weekly calls with them, and her take on it was that they shouldn't stop helping people to engage in prevention activities. What exactly was the conversation with Bob on 12/22? I'm a little confused about where this came from?

Karen, I'm following up since, I did not receive a response from the email below.

During the 12/22/15, CLPPP Grant (lead) meeting at the Burton Clinic, our GCHD staff were informed by Bob Scott, that cleaning supplies and education could affect the ETC results. This helps clarify the intent of the recent restrictions of our CLPPP Grant.

GCHD has also been informed that ETC Consulting has only conducted 11 residential lead assessments for the approximate 140 known EBL cases.

GCHD will not conform to the recent restrictions of the CLPPP grant and we will provide assistance for the known EBL families in Flint, immediately.

The rate at which the assessments are being conducted and the actions by your department, which allows for continued lead exposure for the known EBL children, is unacceptable.

**Subject:** CLPPP Grant

Hi Karen,

I'm trying to get a better understanding of the CLPPP Grant. Dawn Hallwood recently left GCHD and I'm helping coordinate the grant activities.

Andrew Schacher informed me that the scope of the grant has recently been limited to first time pregnant women and also for known EBL families, but only after ETC Consulting has conducted a residential assessment.

My office has been informed that ETC Consulting has not conducted many residential lead assessments, relative to the number of known EBL cases.

The CLPPP grant is essential to help GCHD assist these known EBL families. The imminent threat that is causing the elevated blood needs to be identified and mitigated as soon as possible. GCHD is prepared to provide immediate assistance.

Will you please provide clarification of our restrictions? If the scope has changed, I propose that we maintain our original agreement.

# Flint Blood Lead Level Testing Protocols

## October 21, 2015

### Target Populations

#### Priority Level 1:

- All children in Freeman, Brunnell, Eisenhower schools
- Retesting of any child with an existing EBLL capillary >5
- Retesting of all of venous samples as directed by AAP periodicity follow-up schedule

#### Priority Level 2:

All Genesee County school facilities not listed above.

### Methodology

#### Priority Level 1:

Encouraging patients to contact Medical Home to obtain testing through primary care provider

#### Priority Level 2:

- Community and Medicaid Health plan Testing Events
- Hurley Pediatric testing events

### Outreach, Follow-up and Resources

- Genesee County Health Department case management and support for EBLL>5
- Distribution of letters to families via community partners for guidance, resource and support
- Distribution of letters to primary care provider with guidance and support

**Subject:** CM Updates for Flint  
**Attachments:** CMprotocol121315\_Flint\_EH Edits.docx

See attached.

When I combed through it, it seemed like there were only a few places where you would want to differentiate what you ask because of the child's age. The developmental screening was the most

obvious...see if the approach works. I added several questions in the comments.

Also--Project Find is no more! When the grant was defunded some items were continued--but the statewide hotline was disallowed. OSE has a number you can call...but it isn't really a "find line". Might be a good question for Susan Broman's people.

Karen--we will have to go over the forms again....sigh.

## Michigan's Case Management Protocol for Children with Elevated Blood Lead Levels in Flint, Michigan

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

### Section 1: Application of this Protocol

The State of Michigan's childhood lead poisoning elimination goal is to identify and provide appropriate follow-up services to all children with Elevated Blood Lead Levels (EBLLs) in order to support their continued health and safety.

To meet this goal, case management services should be performed for children with BLLs > 5 ug/dL as determined by a venipuncture test.

#### Origin

This document represents a standard of care as prescribed by the United States Centers for Disease Control and Prevention (CDC), the American Academy of Pediatrics (AAP), Michigan state law and Medicaid. This document contains case management guidelines developed by the Nursing and Health Support component of the Michigan Department of Health and Human Services Childhood Lead Poisoning Prevention Program (CLPPP).

### Section 2: Expectations

Desired outcomes of EBLL case management include:

- Reducing an elevated blood lead level below the current CDC reference value of > 5 ug/dL;
- Evidence that communication has occurred between caregivers and other service providers to ensure the child's continued health and safety;
- Evidence and assurance that appropriate action has been taken by case managers as required by this protocol.

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

### Section 3: Required Activities

Activities defined by Medicaid, the CDC and AAP as encompassing case management include:

- Client identification and outreach
- Individual assessment and diagnosis
- Service planning and resource identification
- Linking clients to needed services
- Service implementation and coordination
- Monitoring of service delivery
- Advocacy
- Evaluation

#### 1. Client Identification and Outreach

Case managers must continually review the list of EBLs >5ug/dL provided on a weekly basis by the MDHHS Surveillance Manager. Case managers must contact and offer case management services to these families based on the schedule below. Outreach efforts must be deliberate, ongoing and varied in order to ensure that contact with families is made.

All outreach activities must be documented in activity logs and the HHLPP system.

##### a. Schedule

The following schedule must be used when initiating initial in-home nursing visits:

- BLL 5-14 within 2 weeks of referral;
- BLL 15-44 within one week of referral;
- BLL 45+ within 48 hours of referral;

##### b. Fees for Services

Medicaid provides reimbursement for the following in-home visits related to a venipuncture EBL > 5ug/dL:

- Two Environmental Investigations (One initial and one alternative location as needed)
- Two Blood Lead Nursing Assessment Visits (two in-home visits)

**Comment [E1]:** Karen...this was still highlighted...

What if we said one primary residence visit and one alternative location where child spends >6 hours per day?

#### 2. In Home Visits

##### Nursing Assessments Overview

Nursing Assessment visits must be provided in the child's home. The objectives of the first home visit are:

- **Individual assessment and diagnosis** through a health, development, social and dietary history for the affected child and identification of the possible sources of lead in the child's environment.
- **Development of a Plan of Care** that identifies resources specific to the individual child and

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

family so that exposure is reduced, appropriate referrals and recommendations can be implemented, and the impact of lead exposure minimized.

- To **provide education and anticipatory guidance** for caregivers so that the effects of exposure are minimized
- To **advocate for families** to ensure they receive the appropriate support for managing their child's exposure through community referrals and resources; and
- To **ensure that the Individualized Plan of Care is continually reevaluated** until the child's lead level is below the current CDC reference value of 5ug/dL.

The initial visit will focus on:

- Assessment of the growth and development of the child, including any symptomology that may be present in the child (refer to Initial Home Visit assessment form for a list of common symptoms)
- Behavioral assessment of the child including any aggressive and/or hyperactivity
- Nutritional assessment of the child
- Assessment of typical family practices that may produce lead risk (e.g., hobbies, occupation, cultural practices)
- Limited physical identification of lead hazards within the dwelling
- Identification and planning for testing of any other family member at risk for lead hazard exposure
- Education and information regarding lead hazards and ways to minimize those risks in the future
- Development of a family plan of care to increase the safety of the child from lead hazards
- Facilitating blood lead follow-up testing and treatment recommended by the PCP.

a. First visit activities

The purpose of the initial nursing assessment home visit is to gather sufficient information to develop an Individualized Plan of Care for the child with an EBLL and to ensure that all siblings and pregnant women in the household are identified for further screening. The child with EBLL must be present at the initial visit for a physical assessment and observation of his/her behavior.

\*\*\*While many of the activities described below are designed to engage parents and caregivers of children ages 0-6 (lead poisoning is most prevalent in this age group), *lead poisoning can occur at any age*. Given the widespread testing, outreach and efforts underway to engage families in Genesee County, this case management protocol has been revised to include information relevant for children and caregivers up to age 18.\*\*\*

**Comment [E2]:** Karen, I added this. What do you think?

During the initial visit, the following must be accomplished:

- Obtaining Caregiver authorization to release protected health information to the case management team and to referral sources as needed using the MOCH HIPAA Authorization to Disclose Protected Health Information Form or any other agency-developed disclosure form.
- Discuss possible sources of lead exposure.

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

- o Lead Paint (walls, doors, windows, furniture)
- o Child's toys or common household items
- o Cultural foods, cookware or other items
- o Parent occupation
- o Lead in water or pipes
- o Other

**Comment [E3]:** Should we include something here like "other dwelling or outside risk"

- Interview of the child's caregiver(s) to collect the child's health, social and nutritional history. (Refer to the Initial Nursing Visit form).
  - o For all children, obtaining a health history that addresses the current health status of the child, including:
    - Past history of lead testing and, if necessary, chelation for the child;
    - Past history of lead testing for other family members;
    - Child's history of anemia (if any); ask caregiver to relate information re: the child's hemoglobin status;
    - A visual/physical assessment of the child's body systems including eyes, heart and lungs, abdomen/digestive, elimination, muscular and skeletal;
  - o For children ages 0-6, obtaining a developmental history that addresses the current status of the child, including:
    - Caregiver's observations about the child's developmental progress;
    - Caregiver's assessment of the child's behavior;
    - Caregiver's assessment of the child's cognitive development;
    - Performing a standardized developmental screening (ASQ or children ages 0-6 or psychosocial screening like the Pediatric Symptom Checklist for children over age 6);
    - If the child is already enrolled in Early On or Special Education, you may instead obtain parent consent and request the evaluation assessment results from Early On or Special Education.
  - o For children ages 6+, obtaining a developmental history that addresses the current status of the child, including:
    - Caregiver's observations or knowledge about the child's developmental progress (inquire about special education or services the child currently receives);
    - Caregiver's assessment of the child's current behavior including aggressive behaviors, irritability, difficulty concentrating, sleep loss, memory loss and fatigue;
    - Caregiver's assessment or other documentation of the child's cognitive development including difficulty in school, poor grades, or low IQ scores;
    - Performing a standardized developmental screening (Pediatric Symptom Checklist);
    - If the child is already enrolled in Early On or Special Education, you may instead obtain parent consent and request the evaluation assessment results from Early On or Special Education.
  - o A complete nutrition history for the child including the following:
    - Caregiver's description of the child's usual diet pattern. This should begin with a twenty-four hour recall of his/her intake and ask if this is typical of the child's

**Comment [E4]:** Karen...I made this up with some help from the internet...Is this how you would say this?

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

- intake. (For children over age 6, discuss diet with child and caregiver).
- Ask about child's intake of breast milk, formula and/or cow's milk;
- Ask about child's intake of other dairy/calcium sources;
- Ask caregiver about child's intake of iron-containing foods and dietary fat;
- Inquire about ethnic food products imported or carried from another country;
- Ask about dietary supplements;
- Ask child and caregiver about the number of meals and number of snacks the child consumes each day; and
- Ask where the child sits to eat meals and snacks.
- A social history for the child including:
  - Caregiver's description of play and sleep habits. For children over age 6 inquire about daily school habits.
  - A child's usual play area (for children over 6 inquire as to where the child spends after school time).
  - Environments other than the child's primary residence where the child spends 20 hours per week or more (caregiver name(s) and addresses/childcare center name and addresses for children ages 0-6, school name and address for children 6+).
  - Family occupational and hobby history: include occupations and hobbies of adults in the home and other adults with whom the child spends time;
  - Cultural practices or foods in use by the immediate family as well as other adults with whom the child spends time;
  - Unusual behaviors including excessive hand-mouth; chewing on toys, crayons, newspaper/other print material, matches; consumes non-food items, such as dirt, grass, cigarettes/ashes; chews on furniture? crib/playpen? window sills/frames/doors?; plays at or near chipping or flaking paint, or has been seen eating paint chips.
- Documentation of other information including:
  - Family income source
  - Whether the family receives: WIC, food stamps, Medicaid/Medicare, other support, such as a food pantry.
  - If the residence is a rental property: name, address, phone number and/or other contact information for the rental property owner.
  - 'Barriers to obtaining medical care: time, both amount of time needed and time of day, child care, transportation, literacy, language barrier, etc.

After the child's history is completed, ask the caregiver for permission to look around the child's common areas for visual evidence of exposure sources, exposure behaviors and family practices.

The Individualized Plan of Care and Referral forms should be completed after reviewing the information obtained in the course of the initial nursing visit.

Appropriate referrals will be made in a timely manner. Early On or Special Education referrals should include ASQ (children 0-6) or Pediatric Symptom Checklist (ages 6+) results as well as documentation of diagnosis. A report to the child's healthcare provider should also be completed and submitted at this time. (Use the Report to Healthcare Provider form).

**Comment [E5]:** Karen-I reworded this to get at the idea of "excessive" hand to mouth (since SOME would be normal) and thought we could include older children in the sentiment that way...

**Comment [E6]:** New language

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

**b. Second and subsequent home visit activities**

The purpose of the second and/or subsequent nursing home visits is to assess caregiver implementation of the plan of care, including compliance with medical follow up, housekeeping practices, and reductions in exposure. Objectives of the second home visit are to:

- Reinforce the educational information presented to the family during the first visit
- Validate the family's ability to carry out activities to minimize risks of continued lead exposure
- Modify the plan of care to minimize lead risks, as needed
- Facilitate blood lead follow-up testing and treatment recommended by the PCP
- Follow up on any referrals made

The second visit must include:

- A review of contact information and primary care provider information with child's caregiver(s);
- Review of initial forms and documenting changes in EBL, child's health history, nutritional history, social history, and conditions in the home;
- Review of the Individualized Plan of Care to identify additional messages to communicate at this visit;
- Assessment of the family's understanding of their responsibilities under the Plan of Care and a determination as to whether additional education or resources are needed to implement the plan;
- Revising the Individualized Plan of Care as needed and obtaining consent or signatures; and
- Notifying the health care provider and other members of the team, including the Environmental Investigators, of significant changes.
- Complete any activities not finished during the first visit.
- Timing of the second subsequent visits may be influenced by observations/ information from the first visit, and at the case manager's discretion, may take place relatively quickly.

Results of the second and/or subsequent follow-up visits must be recorded on the Follow Up Visit form.

**c. Nursing assessment case closure activities**

Nursing services may not be discontinued until all of the following are completed

- At least 2 home visits in which lead education was provided are done
- Nutritional, medical and developmental assessments are done
- There is one blood lead level below 5 ug/dL
- Recommended abatements and/or lead hazard reduction is completed

Use of administrative case closure should be infrequent and reserved for the following **extenuating circumstances**:

- Parent refuses services
- Family has moved out of jurisdiction (a new referral MUST be made)
- At least 3 documented attempts to locate or gain access to the child and caregiver have failed (2 visits/ 1 certified mail) and attempts to reach the family using PCP or MIWIC,

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/13/15

MICAR, CLPPP staff and other resources have been made

#### Section 4: Environmental Investigations

The Michigan Department of Health and Human Services Healthy Homes Section is available to assist case managers with environmental investigations.

The case manager must work collaboratively with the environmental investigator to maximize the opportunity for scheduling joint visits and to ensure that inspection and remediation take place in a timely fashion.

If the child's BLL is > 44 ug/dL, the case manager will contact the primary care provider and the hospital immediately to understand the plan of care. Coordination with the EBL investigators, and hospital must be done to ensure that the child will be discharged to a safe environment (e.g. the designated property has been certified free of lead hazards before the child returns to that location.)

Contact the Health Homes Section at (866) 691-5323 or 517 335 8252 or refer to the case management guidelines for environmental visits at [http://www.michigan.gov/documents/mdch/EBL\\_EI\\_Protocol\\_February\\_2015\\_484429\\_7.pdf](http://www.michigan.gov/documents/mdch/EBL_EI_Protocol_February_2015_484429_7.pdf).

**Comment [E7]:** Karen do we want to update this sentence at all?

**Comment [E8]:** Updated this to ug/dL since that is what we use above...

**Subject:** Fwd: NEWS UPDATE--Flint Water Funds Head To Snyder

Sharing FYI - the \$850,000 is to be split between CLPPP for case management and Healthy Homes for EBL investigations. Next step for us is decisions about how to put the case management services into place, which Sue Moran has already scheduled a meeting to discuss. I'll be calling in for that meeting - feels good to know we can do more to contribute to something good happening for families in Flint.

## Flint Water Funds Head To Snyder

The Senate wasted no time in approving today more than \$9 million to help pay for temporarily returning the city of Flint to the Detroit water system and fund additional staffing in the city's schools to gauge the exposure to lead.

The fix came with unanimous passage of HB 4102, a supplemental appropriations bill the House passed late Wednesday.

The bill allocates \$6 million to get the city back on Detroit's water system; \$300,000 for the Department of Environmental Quality's drinking water and environmental health services; \$1 million for the department's laboratory services; \$1 million for Department of Health and Human Services emergency services to purchase and distribute water to Flint residents; \$850,000

for follow-up services for children, including lead testing and care for those with abnormal levels; and \$200,000 for plumbing inspections.

Senate Minority Leader Jim Ananich (D-Flint) expressed thanks for his colleagues' support in the matter. The move to pump water for the city from the Flint River without proper corrosion controls allowed lead in service lines and welds to leach into the drinking water at levels beyond those requiring remediation.

Gongwer News Service will have more on this story in Thursday's Michigan Report.

**Subject:** FW: addresses and parent names  
**Importance:** High

Hi Kris -- attached is the file of addresses and Guardian names we have associated with children for whom our data indicates elevated blood lead levels. I am hoping to touch base about the best way to compare this list with your database of who has received filters. You had indicated (a week ago?) that your area could do the comparison -- is that still true, or how can we assist?

**Subject:** RE: Emergency Elevated Lead Management in Flint, financial vehicle for Follow-up Nurses, contract development for Flint

As Nancy mentioned earlier in the week, we will want to try, when possible, to have the nurse consultant and the EBL investigator perform the site visits at the same time. Language to this, should put into the contract. Secondly, coordinating education and outreach events with both the CLPPP program and our Healthy Homes Section is important. I believe that most of the data on the families will be the same between the county and with CLPPP so there shouldn't be a need to discuss this. Nancy will Genesee Co. do any reporting functions?

Nancy, see below email from Ms. Hensler.

**We need to do the following (if everybody agrees):**

Nancy should draft a letter for Sue's signature, to Mark Valacak, that says we're sending him \$xxxxxx through Egrams, for a project called XXXXXX, for the time period XXXXXX, and it should be for the following activities, reports, etc (a short list). Say we'll work with Ingrid Fink on the details and that we'd like all this finalized by the end of the week. Letter should go out **today**. Mark Valacak can take that to his administrator, and it'll make it easier for him to get started on logistics on his end. He might need some approvals from the County.

Work with Jeanette and your budget liaison to develop and execute the project and amendment. The contract requirements will go in Attachment III, and as soon as we get the amendment executed, they (Genesee) can begin activities. *Wes, is there any reason to build in any items from your area?*

Nancy, build in a bunch of specific metrics on data collection and reporting, as we want to assure we can evaluate this new project, as there will be some interest in the outcomes from persons way above my pay grade.

As Mark Valacak said yesterday, you can work directly with Ingrid Fink on the budget particulars. *I suspect all of this can be done before the end of the week.*

Likewise Wes, Jeanette Hensler and staff will do whatever they can to facilitate your contracts.

Hi Mark,  
We need to set this up as a new project.

Please send the project title and the amount to the shared mailbox and copy the budget liaison. Please also include the project period and any provisions/requirements to be added to Attachment III.

This project will be released as soon as we receive the information.

This project will be in the executed amendment as soon as the application is submitted and approved.  
Thank you,  
Jeanette

**Cc:** Travis, Rashmi (DHHS)  
**Subject:** Emergency Elevated Lead Management in Flint, financial vehicle for Follow-up Nurses  
**Importance:** High

Jeanette and Nancy,

I just had a call with Sue, Rashmi and Genesee on possible vehicles to get nurses to do the follow-up on children in Flint with elevated lead levels.

Mark Valacak, the health officer already has a nurse, Sherry XXXX, who is experienced in lead management, but currently working in immunization. He also has another nurse ID'ed who can do the task. Depending on how much \$ we send, he could get a couple more nurses for the follow-up, from his seasonal nurse bank (retired public health nurses).

At any rate, looks like the vehicle would be through the GCHD, rather than us trying to contract from up here.

Nancy what do you think of this scheme?

Jeanette, how should we work this in Egrams. Set up a separate new project?

Augment an existing project, like MCH Block Grant?

Some other procedure?

What would be fastest?

Thanks

Dear Governor's Office:

Please provide the following to the Governor as a part of his daily briefing packet. If you have any questions, please let us know.

1. Action Steps Updated Document for the week of November 2-6, 2015
2. Flint Drinking Water Action Plan Update
3. Freeman Elementary Report Final
4. Freeman Elementary Final Lead Results
5. Freeman Elementary Final Copper Results
6. Flint Home Owner Data by ZIP Code
7. Flint Home Owner Data by Concentration

As a reminder we will prepare these reports to you weekly, every Monday afternoon, for the previous week's actions.

**Morgan,** When sending these data results to the Governor, you may want to consider keeping documents 4-7 as separate pdfs for the Governor, in

lieu of assembling them all together in one pdf, but I'll make that your call. (Thanks, Mary Beth)

Thank you.

Dan Wyant  
Director

## City of Flint Water Action Steps for Week of November 2-6

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
1.	Conduct After Action Plan	DEQ	George Krisztian	Meeting held on 10/29/15 to discuss time line
2.	Introduce legislative changes to Part 54 of NREPA – Drinking Water Revolving Loan Fund	DEQ, Treasury, and EPA	Maggie Pallone George Krisztian Sonya Butler	Draft language submitted to Maggie Pallone for review
3.	Assist After Action Review Panel	DEQ	Madhu Anderson George Krisztian Karen Tommasulo	Panel created and press release issued on 10/21/15
4.	Staff hiring plan	DEQ	Jim Sygo Maggie Pallone George Krisztian	Negotiations underway to contract with the Genesee County Health Department
5.	Finalize fiscal year 2017 budget request	DEQ	Maggie Pallone George Krisztian	
6.	Meeting(s) with school staff/management	DEQ	Jim Sygo Steve Busch Pat Cook Mike Prysby	A summary report for Freeman Elementary School has been drafted
7.	Contact DHHS regarding lead education material for schools; provide information as requested by DHHS	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	Meeting held on 10/27/15; action items created
8.	Follow up with city of Flint regarding corrosion control treatment and their plans to address requirements and options provided for in 10/30/15 DEQ letter	DEQ and EPA	Jim Sygo Steve Busch Pat Cook Mike Prysby	

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
9.	E-mail city of Flint regarding timing to install corrosion control now that the construction permit has been issued	DEQ	Jim Sygo Steve Busch Pat Cook Mike Prysby	E-mailed city of Flint on 11/4/15; 11/5/15 response indicated equipment to be ordered and plan to start installing feed piping on 11/9/15
10.	Review Monthly Operation Reports (MORs) for Standby Operation of Flint Water Treatment Plant with city of Flint; draft letter to city of Flint documenting Standby Operation requirements	DEQ and Flint	Jim Sygo Steve Busch Pat Cook Mike Prysby	Letter is drafted and will be sent to city of Flint the week of 11/9/15; MOR review with city of Flint will be conducted during next routine site visit
11.	Work with Karegnondi Water Authority (KWA) and other agencies to address bottleneck issues; check weekly for status update	DEQ and KWA	Jim Sygo Steve Busch Pat Cook Mike Prysby	Issues regarding soil erosion controls during construction are being addressed
12.	Continue evaluating city of Flint Service Line Record status and comparison to sampling pool	DEQ and Flint	Jim Sygo Steve Busch Pat Cook Mike Prysby	Letter requesting additional information/documentation to be provided to city of Flint on 11/9/15
13.	Provide DHHS with any available cross-reference information regarding lead service lines and plumbing materials	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	
14.	Develop childcare facility guidance or review DHHS-related materials	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	Meeting held on 10/27/15; DHHS to provide materials
15.	Develop draft sampling protocol for residential exposure assessment for DHHS	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook	Draft document under development; discussed preliminary plan with DHHS

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
			Mike Prysby	
16.	Make progress on drafting a generic school sampling guidance document for statewide distribution; target audience: schools served by municipal water	DEQ and LARA	Jim Sygo Steve Busch Richard Benzie	Draft document under development to make it an easy-to-read and follow guidance document
17.	Attend 11/5/15 meeting arranged by DHHS regarding residential elevated blood lead investigations and water testing	DEQ and DHHS	Jim Sygo George Krisztian Steve Busch	Done

## Flint Drinking Water Action Plan Update

### **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

#### **Key Actions:**

- The city of Flint has received the necessary building permits to move forward with plans for the supplemental addition of phosphate to water that is coming from the Detroit Water and Sewerage Department. The purpose of the supplemental addition of phosphate is to reestablish the protective coating throughout the distribution system. This protective coating slows the leaching process of lead from service lines, household fixtures, and solder used for connecting copper pipes. The city of Flint has made the purchase of the necessary equipment a high priority and hopes to have the pumps installed and running within the next month.
- The report for Freeman Elementary School that documents and explains the results of the plumbing evaluation conducted by the DEQ and DLARA has been completed and will be distributed on November 9. The report demonstrates that the issues in the school are fixture-specific and that there was no evidence found to suggest that significant lead contamination is occurring deep within the plumbing system. The report will recommend replacement of fixtures that were found to have lead levels exceeding 15 parts per billion. Once a press release has been issued, the report will be posted to the Flint water Web site: [www.mi.gov/flintwater](http://www.mi.gov/flintwater).
- Data for residents of the city of Flint have been compiled into spreadsheets that sort the data by ZIP Code and also by concentration. The data to date indicate that the issue of lead contamination is not system-wide but is site specific. Over three quarters of the samples showed lead levels of 5 parts per billion or less and over 91 percent of the samples were at levels of 15 parts per billion or less. These spreadsheets will also be posted to the Flint water Web site.

#### **Positions:**

- With respect to the school data and the samples submitted by residents through the free lead testing program, the issue of lead contamination in the water appears to be site specific. In both cases, the water within the distribution system does not appear to be the issue. The contamination appears to be coming from fixtures, solder used to connect copper, and from lead service lines. While the initial results are encouraging and show that the large majority of homes do not have an issue, it is important that residents do not make assumptions. The only way to know if water contains lead is to have it tested.

#### **Concerns:**

- The action level of 15 parts per billion that is used in the lead and copper rule (LCR) was set up to determine if a supply was utilizing optimized corrosion controls. It was not meant to serve as a health-based exposure model. The

## **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

### Flint Drinking Water Action Plan Update

Page 2

DEQ will be releasing data on Freeman Elementary School and residential data on November 9. The DHHS is currently working on evaluating blood lead levels on children in the city of Flint. It is important that when the DHHS is ready to present their data that the message they present does not inadvertently contradict information provided by the DEQ. While it is recognized that the ultimate goal is to have no detectable amount of lead in the water, this goal may not be practical as the DEQ utilizes the criteria as specified by the U.S. Environmental Protection Agency (EPA).

- The State of Michigan is being criticized as a result of recent information coming to light that a significant number of samples were not collected from proper sampling locations as part of the sampling program in the city of Flint to demonstrate compliance with the LCR under Michigan's Safe Drinking Water Act, 1976 PA 399, as amended (Act 399). Recently the city of Flint began to electronically convert customer service line information. This effort, along with statements by some of the city of Flint's certified operators, directly conflicts with information certified by the city of Flint in documents referred to as LCR compliance monitoring certification reports.
- Correspondence is drafted and will be sent to the city of Flint requesting that they provide appropriate documentation to demonstrate that the sampling locations selected and certified by the city of Flint comply with Act 399. In the absence of appropriate justification/documentation, the city of Flint may be subject to enforcement for violation of Act 399.

### **Significant Event:**

- On November 3 the EPA issued a memorandum to address "certain concerns raised about the application of the [federal] 1991 Lead and Copper Rule, specifically the requirements pertaining to maintenance of optimal corrosion control treatment, in situations in which a large water system ceases to purchase treated water and switches to a new drinking water source." This EPA memorandum further states: "This type of situation rarely arises and the language of the LCR does not specifically discuss such circumstances. After reviewing the rule with our Office of General Counsel, it appears that there are differing possible interpretations of the LCR with respect to how the rule's optimal corrosion control treatment procedures apply to this situation...." This EPA memorandum clarifies the requirements should a situation like Flint occur again in the future. However, it clearly recognizes that the options chosen by Michigan were one interpretation or option of the LCR.

### **Changes from Previous Report:**

- Staff e-mailed Michael Glasgow and Brent Wright of the city of Flint on November 4 to request a time line and a request to notify the DEQ when the phosphate equipment is installed. Mr. Wright responded on November 5 noting

## **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

Flint Drinking Water Action Plan Update

Page 3

that the city of Flint just received the Act 399 permit in the mail on November 5. Equipment is to be ordered by November 6, and the Flint Water Treatment Plant operators plan to start installing the feed piping on November 9.

- A letter detailing standby operation requirements is currently being prepared by the DEQ and will be sent to the city of Flint during the week of November 9. A review of the standby operation monthly operation reports with the city of Flint will be conducted during the next routine site visit at the Flint Water Treatment Plant.
- A letter has been prepared that requests the city of Flint to provide additional information and documentation regarding all of their historic LCR compliance sampling sites and to compare the service line information reported on the LCR compliance monitoring certification reports against the service line information from the city of Flint's digitized index cards. Conflicts noted between the index cards and the LCR compliance monitoring certification will need further explanation, and the city of Flint will need to provide supporting documentation demonstrating these sites meet Tier 1 criteria. The letter will be provided to the city of Flint on November 9.
- The draft document for sampling protocol for residential exposure assessment is under development. DEQ staff discussed the preliminary plan with DHHS staff.
- The draft document for generic school sampling guidance for statewide distribution is under development. Staff is working on making this an easy-to-read and follow guidance document.
- DEQ staff met with DHHS staff on November 5 to discuss residential elevated blood lead investigations and a protocol for water testing.

### **Other Items:**

- As provided by the DHHS, the purchased total water filter/pitcher distribution through November 6 is 13,649 units.
- Attached are the:
  - Final report for the plumbing evaluation of Freeman Elementary School
  - Spreadsheets that consolidate the lead and copper data for Freeman Elementary School
  - Consolidated spreadsheets for water samples submitted by Flint residents sorted by ZIP Code and sorted by concentration

# **FREEMAN ELEMENTARY SCHOOL**

## **Outlet Sampling and Plumbing Assessment Recommendations**

---

4001 Ogema Avenue, Flint, MI 48507

## **BACKGROUND INFORMATION**

On Friday, October 23, 2015, the Department of Licensing and Regulatory Affairs (DLARA) and the Department of Environmental Quality (DEQ) conducted an assessment of Freeman Elementary School's plumbing system to gain a comprehensive understanding of how water moves through the building and what types of plumbing materials are used. The assessment identified the following potential sources of lead leaching into drinking water:

- Lead solder joints on copper piping
- Brass valves and brass fittings
- Brass components in fixtures
- Galvanized piping

The assessment also identified 31 faucets or fountains that provide water for drinking, cooking, and/or food preparation. The team developed a sequence for sampling the 31 faucets/fountains based on how the water travels through the building.

On Saturday, October 24, 2015, the DEQ and the DLARA completed sampling of the 31 faucets/fountains, in the order determined by the plumbing assessment from the previous day, following a stagnation period of 12 hours. At each of the 31 faucets/fountains identified, staff collected four samples. Two initial, 125-milliliter samples (P1 and P2) were collected immediately after turning on the tap. The water was then flushed for 30 seconds, and a third 125-milliliter sample (F1) was collected. Finally, the water was flushed for another two minutes, and the fourth 125-milliliter sample (F2) was collected. These samples were used to determine the impact of any lead sources in and around each specific faucet/fountain and its connecting plumbing.

On Saturday, October 31, 2015, the DEQ completed consecutive sampling at three of the 31 faucets/fountains following a stagnation period of 12 hours. This sampling was used to determine the impact of any lead sources located deep in the supply plumbing. The three sites included one site near the building service line, one site near the plumbing mid-point, and one site at the far end of the plumbing system. At each of these three sites, staff collected 10, 1-liter samples. The 10 samples were collected immediately after turning on the tap, and consecutively, without any flushing time in between.

## **WATER SERVICE INFORMATION**

A four-inch diameter cast iron water service line enters the school in the boiler room on the west wall. Piping in the boiler room immediately transitions into galvanized metal piping for cold water lines. Two separate galvanized cold water supply lines exit the boiler room. One in the northeast corner appears to serve the gym, auditorium, and proposed pre-K facilities on the north end of the school. The other exits the boiler room in the southwest corner and appears to serve the remainder of the school to the south, including the library. This line was also found to have grounding connections attached to the piping. Hot water is distributed in continuous loops that feed from and return to a central water heater in the boiler room. Hot water piping material, where exposed, was copper piping with 50/50 lead solder joints. Brass valves were seen throughout the building.

## Outlets With Lead Levels Greater Than 15 Parts per Billion

The DEQ recommends school facilities take action if samples from any drinking water outlets show lead levels greater than 15 parts per billion. Based on the sampling conducted at 31 faucets/fountains on October 24, 2015, the following nine drinking water outlets had lead water level results greater than 15 parts per billion. Each of these nine outlets is listed below with its sample results, including a description of the potential source(s) of lead, and recommended actions for the school to take.

### Outlet: Bubbler Drinking Fountain, Left (DW001)

Location: Hallway outside Janitorial Room

Results: P1=40 parts per billion, P2=6 parts per billion  
F1=4 parts per billion, F2=1 part per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture is believed to have a brass valve. The connection underneath the sink also appears to have some brass components, including the valve at the wall.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location.

If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

---

### Outlet: Sink Faucet (CF029)

Location: DHHS Office, west wall

Results: P1=17 parts per billion, P2=12 parts per billion  
F1=2 parts per billion, F2=non-detect

These results suggest the highest contribution of lead may be from the faucet and its connecting plumbing. The faucet is a Delta 400. This model faucet valve has brass components. This style faucet also has a mixing valve that may allow mixing of hot and cold water. Connecting plumbing in the cabinet under the sink may also contain brass components.

This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.

Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

#### **Outlet: Integrated faucet and bubbler fountain (CF006)**

Location: Classroom 2, south wall

Results: P1=16 parts per billion, P2=3 parts per billion  
F1=1 part per billion, F2=1 part per billion

These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself. The make and model of this fixture is unknown, but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple.

Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

---

#### **Outlet: Integrated faucet and bubbler fountain (CF014)**

Location: Classroom 10, north wall

Results: P1=27 parts per billion, P2=7 parts per billion  
F1=4 parts per billion, F2=3 parts per billion

These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself and its connecting plumbing. The make and model of this fixture is unknown, but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple. Connecting plumbing in the cabinet under the sink may also contain brass components.

Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

#### Outlet: Sink Faucet (CF013)

Location: Classroom 10, north wall

Results: P1=9 parts per billion, P2=18 parts per billion  
F1=3 parts per billion, F2=3 parts per billion

These results suggest the highest contribution of lead may be from the connecting plumbing with some contribution from the faucet itself. The faucet appears to be a Delta 500 series. This model faucet may have some brass components. This style faucet also has a mixing valve that may allow mixing of hot and cold water. Connecting plumbing in the cabinet under the sink should be checked for brass components, including brass valves.

This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.

Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

---

#### Outlet: Sink Faucet (CF015)

Location: Classroom 11, northeast corner

Results: P1=102 parts per billion, P2=326 parts per billion  
F1=14 parts per billion, F2=11 parts per billion

These results suggest the highest contribution of lead may be from the connecting plumbing and from the faucet itself. The faucet is an older design that uses a brass tube approximately 8 inches in length between the hot and cold water valves and connects to the outlet under the sink. This brass tube may be the primary source of lead, explaining the higher second (P2) sample result. The faucet and valves may also contain brass components. Connecting plumbing in the cabinet under the sink should be checked for additional brass components, including brass valves.

This faucet also has an aerator at the outlet. The aerator should be removed, inspected for particulate accumulations, scrubbed clean, and reinstalled. If particulates are found, the aerator should be periodically checked and cleaned.

Replacement of this faucet and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and needs to be completed. If replacement is not currently feasible, **DO NOT USE THIS FAUCET FOR DRINKING OR COOKING.**

### Outlet: Integrated faucet and bubbler fountain (CF024)

Location: Classroom 19, east wall

Results: P1=23 parts per billion, P2=3 parts per billion  
F1=4 part per billion, F2=3 parts per billion

These results were collected from the faucet portion of the fixture and suggest the highest contribution of lead may be from the fixture itself. The make and model of this fixture is unknown, but appears to be made of chrome plated brass and may be connected on the underside of the sink using a brass nipple.

Replacement of this fixture and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

---

### Outlet: Bubbler fountain (CF026)

Location: Classroom 14, west wall

Results: P1=36 parts per billion, P2=30 parts per billion  
F1=17 parts per billion, F2=4 parts per billion

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture appears to be made of chrome plated brass. This style bubbler typically has a 4-5-inch brass fitting that connects to a 3-inch brass nipple on the underside of the sink. This would explain the higher concentrations in the first two sample results. The connection underneath the sink may also have some brass components and should be checked, including the valve.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and should be completed. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes prior to each use and for at least 4 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure. **In general, use of this fountain for drinking water should be discouraged.**

### Outlet: Bubbler fountain (CF031)

Location: Proposed Pre-K Room, south wall

Results: P1=57 parts per billion, P2=3 parts per billion  
F1=2 parts per billion, F2=non-detect

These results suggest the highest contribution of lead may be from the bubbler itself. This bubbler fixture appears to be made of chrome plated brass. This bubbler has a brass fitting connection to a brass nipple. The connector hose is not expected to be contributing lead.

Replacement of this bubbler tap and its connection plumbing with lead-free materials will significantly reduce lead exposure at this location and should be completed. If replacement is not currently feasible, sample results indicate that flushing this tap for 3 minutes following periods of stagnation is likely to reduce lead concentrations and lead exposure.

## Outlets With Lead Levels 15 Parts per Billion or Less

While the remaining 22 outlets showed sample results to be at levels requiring no further action, several recommendations have been identified.

The fourth sample at each of these 22 outlets following approximately 3 minutes of use and flushing at a reduced flow reduced lead concentrations to 4 parts per billion or less. This indicates that flushing of all taps used for drinking, cooking, and/or food preparation for 4 minutes following periods of stagnation will further reduce lead exposure. It is recommended that a flushing operational procedure be developed for use by staff responsible for plumbing operations and maintenance.

Twelve of these outlets are comprised of similar materials as the outlets listed above and could potentially experience higher lead levels under extended periods of stagnation. These faucets/fountains include:

- Sink Side Bubbler Units in Classroom 12 (CF022), Classroom 5 (CF009), Classroom 21 (CF028), Hallway Fountain (DW002), Classroom 15 (CF018), Classroom 17 (CF020), and Classroom 1 (DW005).
- Integrated Faucet Bubbler Fountain Units in Classroom 6 (CF010), Classroom 9 (CF012), Classroom 4 (CF008), Classroom 3 (CF007), and Classroom 7 (CF011).

Replacement of these fixtures with lead-free materials is also recommended.

The remaining 10 outlets showed sample results of 15 parts per billion or less, requiring no further action or additional recommendations. These faucets/fountains include:

- Sink Faucets in Classroom 1 (CF004), Classroom 15 (CF017), Classroom 17 (CF019), Classroom 12 (CF021), Classroom 19 (CF023), Classroom 14 (CF025), Classroom 21 (CF027), and Proposed Pre-K Room (CF030).
- Kitchen Sink (cold) in the Community Room (KC003).
- Sink Side Bubbler Fountain in Classroom 11 (CF016).

## Consecutive Sampling Results and Building Plumbing Recommendations

The consecutive samples taken at three sites in the building on October 31, 2015, provide additional confirmation that the highest contribution of lead appears to be from the individual faucet/fountains and not from the larger diameter supply plumbing within the school building.

Consecutive Sample No.	1	2	3	4	5	6	7	8	9	10
LOCATION	LEAD RESULT (PARTS PER BILLION; ND = NOT-DETECTED)									
Proposed Pre-K Rm Sink Faucet (CF030)	2	1	ND	ND	ND	ND	ND	ND	ND	ND
Classroom 11 Sink Faucet (CF015)	62	8	8	7	7	7	7	6	6	6
Classroom 21 Sink Faucet (CF027)	2	ND	ND	ND	ND	ND	ND	ND	ND	ND

The continued presence of lead in samples collected at Classroom 11 (CF015) may be a result of lead particulates caught in the aerator/screen installed on the faucet outlet or may be from a source of lead further back in the plumbing system. However, the non-detect results from consecutive samples collected in Proposed Pre-K Room (CF030) and Classroom 21 (CF027) suggest any additional source of lead associated with Classroom 11 (CF015) is localized to the plumbing branch serving this faucet. The faucet aerator/screen in Classroom 11 (CF015) should be removed and inspected before completing a more in-depth plumbing analysis. Consecutive sampling results at Classroom 11 (CF015) support the water use restrictions specified for this outlet.

ANALYTE	RESULT (mg/L)	Sample Location	Sample Description	Site Code	Site Code Description

**NOTES:**

1 PPB = 0.001 mg/L

Lead values exceeding 0.015 mg/L and Copper results exceeding 1.3 mg/L are highlighted in red.

Sample results of "Not Detected" have been replaced with a numerical value of zero for ease of sorting.

Samples without a zip code did not have one provided on the accompanying paperwork.

**NOTES:**

1 PPB = 0.001 mg/L

Lead values exceeding 0.015 mg/L and Copper results exceeding 1.3 mg/L are highlighted in red.

Sample results of "Not Detected" have been replaced with a numerical value of zero for ease of sorting.

Samples without a zip code did not have one provided on the accompanying paperwork.

Same child. Lab report is confirmation of verbal information heard last week re the 2<sup>nd</sup> test. We only have verbal information re the drop to 20 and will watch for the lab report to come through.

Under epidemiology surveillance- :

- **Second lab report received for hospitalized child in Flint who was with the very high level, confirming that his BLL had dropped from the 50s to the 30s as of the second test.**

Is this the same child referenced under the CLPPP section (nurse reports level dropped to 20?) Or is this a second child with very elevated lead level?

Linda,

Martha wants to discuss this. Patti and I have talked and are digging farther.

Bob

**To:** Scott, Robert L. (DHHS) <ScottR9@michigan.gov>  
**Subject:** 2014 Lead

Hi Bob,

Corinne and Sarah looked at our two tables and couldn't find a discernable pattern. In some zips I have more and in others you have more.

Yan and I documented the data steps and the numbers at each step, and also by age group.

Raw data set from warehouse n= 179,374

156,069 have one test per year

23,305 duplicate tests (2-22 tests)

10,906 retained highest test per individual

Total analytic set 156,069 + 10,906= 166,975

The attached word document contains the analysis by age group.

I pulled from the warehouse yesterday and there were 179,374 records, which is the same number as I had two weeks ago.

Do you have time this morning to look into this? I have a call at 10 am, and meetings all afternoon, so can meet with you sometime this morning.

Patricia McKane, DVM MPH - Manager, Maternal & Child Health Epidemiology Section | Michigan Department of Health and Human Services | Lifecourse Epidemiology and Genomics Division | PO Box 30195 / 201 Townsend St 4<sup>th</sup> Floor - Lansing, MI 48909 | Cell [PPI]

Amendment to  
Data Use and Non-Disclosure Agreement (DUA) Concerning  
Protected Health Information or Other Confidential Information  
for Project Titled:

“Analysis of Pediatric Blood Lead levels in Flint Michigan” (Data Recipient: Mona Hanna-Attisha, MD)

This Agreement is amended to expand the data request as follows:

- 1) Provide data since September 15, 2015(end date specified in signed DUA) to present and then updated every two weeks until the expiration of the approved Institutional Review Board in both institutions.
- 2) Provide data to include all Genesee county children less than 72 months at the time of testing.

All other conditions of the approved DUA remain in effect.

I, the data recipient have read, understand, and agree to the above amendments

**Subject:** case management for children in Flint/Genesee older than age 5.  
**Attachments:** REVISED GCHD Contract.Flint water 11.18.15.docx

**Importance:** High

Hi Rashmi, in response to your inquiry:

- The list being send to GCHD for case management was originally developed based on instructions we received from Administration; Bob and I were asked to include 0-5 year olds with an EBL  $\geq 5$ , living in the identified high risk zip codes (I believe it is zip codes 01-07, but Bob can confirm that detail). To my knowledge, those are still the parameters for the list that is being used.
- We estimated the number of children potentially needing case management, and requested an amount of special 'Flint water' CM funding, based on the size of this list.
- We support the focus on the youngest children because of the disproportionate impact lead exposure has on their growth, learning, and development. This impact starts to decrease dramatically around age 6 because of change in behavior, change in growth and development, etc.
- The current 'Flint water' contract language does speak to providing services to children on the list (see attached).
- In response to an inquiry from the GCHD CM Supervisor about a child with and EBL of 4, we did agree that there will be unusual circumstances that they encounter, for children not on the list, in which they should use their discretion about providing CM under the 'Flint water' contract. I sent them an email to this effect, which I forwarded to you earlier today.
- Simultaneous to the above activity, the Surveillance staff continue to send GCHD a weekly list of ALL elevated BLLs in the entire county, as required by PH Code.
- Children with EBLs older than age 5 are included on that regular weekly list.
- Medicaid Policy is in effect for GCHD (any health department) to bill for 2 'Nursing Assessment' visits (e.g. what we call Case Management) for any child with an EBL  $\geq 5$ .
- Therefore, the components are already in place for GCHD to provide and bill for CM for older children (in fact all ages of children, throughout the entire county). The difference is that the activity wouldn't be part of the 'Flint water' contract.
- An issue could be if they identify an older child for whom they feel CM is critical, who is not enrolled in Medicaid.

I hope the above information is helpful – please let me know what questions you have. I'm not sure there is a problem or barrier, but if one is identified, I'm confident we can figure out a good way to deal with it!

Nancy

## **CHILDHOOD LEAD POISONING PREVENTION PROGRAM**

### **Child Elevated Lead Case Management**

### **SPECIAL REQUIREMENTS - REVISED**

(Genesee County Health Department)

#### **Purpose:**

Grantee activities funded by the Department are expected to be focused on case management and intervention activities for children < age 6 identified with confirmed elevated blood lead levels ( $\geq 5$  ug/dL) since April 2014 and ongoing through FY2016. These funds are intended to augment, not replace, services billable to Medicaid. This is one time funding.

#### **Funding requirements:**

1. Funds may be used only for the following purposes:
  - a. Administrative support and data entry documentation/reporting for any services rendered under this contract.
  - b. For children insured by Medicaid, testing, nursing visits and case management services beyond those billable to Medicaid.
  - c. For children not insured by Medicaid, testing and all nursing visits and other case management services provided.
  - d. Funds may be used to provide Case Management services to residents of the City of Flint or Genesee County, for children who live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint.

#### **Grantee Requirements:**

1. Regular and ongoing Supervision will be provided by GCHD to all nurses providing services under this contract, with additional support available from the CLPPP Nurse as needed.
2. The CLPPP Case Management protocol will be utilized to assure comprehensive services.
3. All nurses providing services funded through this contract must participate in Lead Poisoning Prevention Case Management training prior to providing such services. Training will be coordinated and delivered jointly by CLPPP and GCHD Lead Nurse.
4. All nurses providing services funded through this contract must participate in training to use the Healthy Homes and Lead Poisoning Surveillance System (HHLPPSS) to appropriately document services rendered.
5. Grantee must bill Medicaid for services rendered to Medicaid-insured children, for the maximum amount possible. For specific information on Medicaid covered services, please refer to the Medicaid Provider Manual.
6. In providing case management services related to elevated blood lead levels dating back to April 2014, Grantee will utilize lists provided by CLPPP and contact and offer a full complement of case management services to:
  - a. Families of all children with capillary results of  $\geq 5$  ug/dL that have not yet been confirmed by venous blood draw.
  - b. Families of all children with venous results  $\geq 5$  ug/dL that are due for follow-up testing to monitor their lead levels.

7. Each child in the jurisdiction with a new blood lead level  $\geq 5$  ug/dL will be offered a full complement of case management services. Refer to Medicaid policy for an explanation of required services.
8. To the maximum extent allowed by law, nurses providing services funded through this contract will coordinate activities with EBL Investigators assigned to the same cases, including joint, coordinated home visits and exchange of information that supports each to carry out their duties in carrying out this public health activity.

**Required Reporting:**

1. On a weekly basis, Grantee will document all family contacts, case management activities, communications and Medicaid billing in the Healthy Homes and Lead Poisoning Surveillance System (HHL PSS), in a manner prescribed by the Department CLPPP.
2. Grantee must participate in a minimum of weekly review and status conference calls as scheduled by the Department CLPPP.

**Metrics for Contract Monitoring**

Contract monitoring will be based on data recorded in the Healthy Homes and Lead Poisoning Surveillance System (HHL PSS), Medicaid Claims data from the MDHHS data warehouse, and via weekly review and status calls.

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL for whom contact has been attempted.
2. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services.
3. Number and percentage of target children receiving case management services.
4. Number and percentage of target children receiving case management services residing in the City of Flint.
5. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits.

**Prohibited expenditures:**

1. Billable services for children insured by Medicaid.
2. Purchase of or distribution of water filters.
3. Childhood Lead Poisoning Prevention funds may not be used to fund other local public health operations.

**Subject:** RE: PDF map of flint

If the observations are geocoded to the street address, I would be uncomfortable sharing it as part of a public presentation except under three options:

- 1) The "point" is randomized. That can be done and still preserve clustering, which is what I think the county wants to show. The map label can indicate that the locations have been adjusted for confidentiality purposes. Someone on the fifth floor could help with randomization if needed.
- 2) Have attendees sign a confidentiality agreement but that is not going to be possible if there are more than a handful in the audience.
- 3) Show the map for a limited amount of time but attendees are not provided a hard copy and the map is not posted on a web site.

It helps that the data cover multiple years.

Option 1 is preferred for a public presentation. Option 3 is also doable. If the presentation is just to health department staff I don't see a problem in presenting the information as is.

Corinne,

Please see the attached map. I don't see it as violating confidentiality, but I've no expertise in this. Should this be sent to Colin Boes or someone else for confirmation that it's ok to present?

Linda

**Subject:** Re: case management for children in Flint/Genesee older than age 5.

This raises a couple of questions for me, that I anticipate we will receive from GCHD:

1. Is this on a 'use your discretion' basis?
2. Or will Bob be adding those children to the list that he sends to GCHD, that the CM is tied to, so that this is an expectation?

Within both of the above questions is the question of what it is you want us to monitor in terms of implementation? Right now we are monitoring against the list being provided to them. I appreciate any clarification you can offer.

In terms of our follow up -

--yes, we will discuss this with the GCHD CM staff.

--I am anticipating that we will need to make some modifications to the CM protocol, as there are some required components that apply to young children, but not appropriate for older children (for example, developmental screening).

--We may also need to amend the contract language, depending on your response to the above questions. Are there other modifications you anticipate that could impact the contract language, so that we could incorporate those at the same time?

Nancy

Nancy,  
It makes sense to allow the GCHD to provide case management for those beyond the age of 5. If they don't have Medicaid, they can utilize the funding provided to do that. Please convey that to the nurses and supervisor at GCHD.  
Let me know if you have any questions.  
Thanks,  
Rashmi

So, for children older than 5 yrs of age, case management can occur through Medicaid billing. For those not on Medicaid, would we allow them to use the "Flint Water" funds if they feel Case Management is critical?

**Subject:** case management for children in Flint/Genesee older than age 5.  
**Importance:** High

Hi Rashmi, in response to your inquiry:

- The list being send to GCHD for case management was originally developed based on instructions we received from Administration; Bob and I were asked to include 0-5 year olds with an EBL  $\geq 5$ , living in the identified high risk zip codes (I believe it is zip codes 01-07, but Bob can confirm that detail). To my knowledge, those are still the parameters for the list that is being used.
- We estimated the number of children potentially needing case management, and requested an amount of special 'Flint water' CM funding, based on the size of this list.
- We support the focus on the youngest children because of the disproportionate impact lead exposure has on their growth, learning, and development. This impact starts to decrease dramatically around age 6 because of change in behavior, change in growth and development, etc.
- The current 'Flint water' contract language does speak to providing services to children on the list (see attached).
- In response to an inquiry from the GCHD CM Supervisor about a child with and EBL of 4, we did agree that there will be unusual circumstances that they encounter, for children not on the list, in which they should use their discretion about providing CM under the 'Flint water' contract. I sent them an email to this effect, which I forwarded to you earlier today.

- Simultaneous to the above activity, the Surveillance staff continue to send GCHD a weekly list of ALL elevated BLLs in the entire county, as required by PH Code.
- Children with EBLs older than age 5 are included on that regular weekly list.
- Medicaid Policy is in effect for GCHD (any health department) to bill for 2 'Nursing Assessment' visits (e.g. what we call Case Management) for any child with an EBL  $\geq 5$ .
- Therefore, the components are already in place for GCHD to provide and bill for CM for older children (in fact all ages of children, throughout the entire county). The difference is that the activity wouldn't be part of the 'Flint water' contract.
- An issue could be if they identify an older child for whom they feel CM is critical, who is not enrolled in Medicaid.

I hope the above information is helpful – please let me know what questions you have. I'm not sure there is a problem or barrier, but if one is identified, I'm confident we can figure out a good way to deal with it!

**Subject:** CM update  
**Attachments:** GCHD CM update 12.8.15.docx

See attached, lots of activity for today.

Please note item in red, which we would like to discuss during Thursday call.

Nancy

**CM report through 12/4/15:**

- # of contacts attempted: 171 (out of 171)
- # offered CM: 68
- # CM started: 10
- # of children receiving CM who live in Flint: 10
- # billed to Medicaid: 3
- # Other disposition: 3 (3 total children moved to Oakland County, 2 from before, 1 new on the latest report)

**Families that have moved to other counties**

- CM protocol has been provided to Oakland lead nurse to see the 2 children previously identified as having moved to Oakland (2 children from the same family). Names and contact information were conveyed to Oakland today.
- Another family was been identified that has moved to Oakland (this is the '1' that is reflected on the weekly CM report for 12/4); this information has also been conveyed to Oakland.
- Post-call CM staff called us back to report another family that has moved to Tuscola County (not reflected on CM report yet).
  - *Follow up: We have the contact information, and sent message to M. Miller to determine next steps for Tuscola.*

**During weekly status call, reviewed barriers/challenges to families accepting CM:**

- CM staff have another 6 families scheduled, not seen yet so not showing on CM report.
- Some families have multiple children that were in our count, but GCHD has been counting the family, not # of children. So numbers look low.
  - *Follow up: Genesee CM staff will discuss with their Supervisor including count of children (in columns F and H on CM report), not count of families. Both parties understand that the # of Medicaid claims filed will not match the # of children.*
- Many of these are old blood tests – so families are choosing to get a new test, want to see what those results are before they have someone come out.
- Some families have moved, are not at the same address (in Flint/Genesee County) as when the child had the EBL, therefore do not want someone to come out.
- Some people have asked for more information, so they can think about whether they want someone to come out.
- Some people live with other relatives or friends, so need to check with someone else about the decision to accept CM or invite the EBL investigator into the home.
- Some families are convinced that the water is the only problem, so they are not feeling the need for CM and/or EBL investigation that looks at the house. Some have accepted filters, but not CM/EBL.
- Some children have a history of even higher EBLs, so a 5 or even a 10 now is not a big concern to the family.
- Currently GCHD is offering both CM and EBL when they call families; some families don't want a 6 hour visit. Also the nurses are trying to go out with the EBL investigator, which sometimes holds up the CM visits.

- *Follow up: Are we comfortable with the two services being offered separately, in case the family will accept one but not the other? We agreed that MDHHS will review this issue internally; Genesee CM staff will review this with their Supervisor to get her input.*

**Discretion to see children not on the MDHHS provided list**

- We previously had given GCHD ability to use their discretion if there is an unusual circumstance where they deem it best to follow up and provide CM services for a child that isn't on the MDHHS list. Today's conversation was about a 6 ½ year old child with a lead level of 14; they will discuss with their Supervisor on Monday and proceed accordingly.
- We also discussed that they can visit and bill Medicaid for ANY child with a lead level over 5, per the current Medicaid policy.

<Provider Name>  
<Provider Address1>  
<Provider Address2>  
<Provider City> <state> <zipcode5-zip4>

Dear Provider:

**RE: Blood Lead Guidelines to Address the City of Flint Residents' Potential Exposure to Lead**

Michigan Medicaid Early Periodic Screening, Diagnosis and Treatment (EPSDT) guidelines require children to be tested for blood lead poisoning at 12 and 24 months of age, and between 36 and 72 months of age if the child has not been previously tested as indicated by the Medicaid Provider Manual. The Manual is located at: [www.michigan.gov/medicaidproviders](http://www.michigan.gov/medicaidproviders) >> Policy and Forms.

Due to the enhanced public health issue of an increased risk for lead exposure in the City of Flint, providers have been advised to follow enhanced guidelines for lead testing in children:

- Providers should screen ALL children (regardless of Medicaid/insurance status) between 0 and 6 years of age that may have been exposed to the City of Flint drinking water after April 2014. Note: This includes all children less than 1 year of age and children between 3 and 6 years of age.
- If the child has already been screened since April 2014 by a capillary test, providers should follow-up on any elevated levels greater than 5 mcg/dl to ensure confirmatory venous testing is conducted.
- Providers should utilize the standard Blood Lead Level (BLL) Quick Reference for Primary Care Providers located at: [www.mi.gov/documents/deq/ProviderQuickReference\\_Sept2015\\_501831\\_7.pdf?20151204122739](http://www.mi.gov/documents/deq/ProviderQuickReference_Sept2015_501831_7.pdf?20151204122739).
- All clients with blood lead levels greater than 5 mcg/dl should be referred for case management coordinated through the Genesee County Health Department.
- Providers should inquire about the use of a drinking water filter and/or bottled water by all clients residing within the Flint city limits.
- Providers should inquire about other potential sources of lead within the household per the current recommendations of the Childhood Lead Poisoning Prevention Program's Statewide Lead Testing/Lead Screening Plan. The Statewide Lead Testing/Lead Screening Plan is located at: [www.michigan.gov/documents/mdch/testing-screening071009\\_287511\\_7.pdf](http://www.michigan.gov/documents/mdch/testing-screening071009_287511_7.pdf).

Lead testing performed using these enhanced testing guidelines is covered as a Medicaid EPSDT service. Providers should contact the beneficiary's Medicaid health plan for additional assistance if needed. Any questions regarding this letter should be directed to Provider Inquiry, Department of Health and Human Services, P.O. Box 30731, Lansing, Michigan 48909-8231, or e-mail at [ProviderSupport@michigan.gov](mailto:ProviderSupport@michigan.gov). When you submit an e-mail, be sure to include your name, affiliation, and phone number so you may be contacted if necessary. Providers may phone toll-free 1-800-292-2550.

Sincerely,

A handwritten signature in black ink, appearing to read "Chris Priest", with a stylized flourish at the end.

Chris Priest, Director  
Medical Services Administration

**Subject:** Information on the City of Flint's Drinking Water and Announcement of Interim Chief for ODWMA - Message from Director Dan Wyant

Dear Colleagues:

I know you have all heard a lot lately about the drinking water situation in Flint, and I want to update you on recent developments.

Today, I released a statement announcing Chief Deputy Director Jim Sygo will immediately assume the role of interim chief of the Office of Drinking Water and Municipal Assistance.

As details of the situation have emerged, it has become apparent staff made a mistake while working with the city of Flint. Simply stated, staff employed a federal protocol they believed was appropriate, and it was not. However, I am convinced our program staff believed they were doing their job

correctly, and simply did not have the experience with the particular issue of corrosion control in cities of more than 50,000 people.

Today's actions were the result of a long process. In the spring of 2013, the city of Flint announced it would leave the Detroit Water and Sewerage Department (DWSD) in favor of joining the Karegnondi Water Authority, which is constructing a pipeline to bring drinking water from Lake Huron. In the meantime, the city used the Flint River, treated at the Flint Water Treatment Plant, as its full-time drinking water source.

Since then, the system experienced a number of problems, including most recently, elevated lead levels in some homes and schools. To address public health, the Governor led a charge to bring \$6 million in state funds, plus an additional \$2 million from the city and \$4 million from the C.S. Mott Foundation, to fund the city's reconnection with DWSD.

This was a huge first step in fixing the problem. However, while the switch back to Detroit water carried numerous public health benefits, lead in drinking water is largely a function of outdated local infrastructure. For a long-term fix, we are looking at several options to help the city update its infrastructure and remove all lead service lines.

To ensure safe drinking water in the short-term, the state is providing water filters to every resident in the city of Flint. Many local partners, including the United Way, are also stepping up to ensure the city's schools have bottled water available for children as we design a thorough protocol to test all schools.

I know this is a stressful time for many of you, and I appreciate your dedication and hard work. This is a good time to reflect, as a staff, on our purpose as an agency. Our mission is to protect public health and the environment. Whatever the particular protocol or statute you help to implement or uphold, that is our core reason for being. Keep that at the forefront of your mind.

I am proud to lead a staff of such knowledgeable, committed individuals. Thanks, as always, for the work you do.

Sincerely,

Dan Wyant  
Director

**Subject:** letter  
**Attachments:** Parent Letter FINAL Draft 102615.docx

October 26, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services ~~want to help you understand~~ are providing answers to the following questions:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

#### **Where does lead come from?**

~~Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.~~ Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead.

#### **Should my child get a blood lead test?**

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

**Formatted:** Font: Not Italic

#### **Where should I go to get a blood lead test for my child?**

The best place to get your child's blood lead test is your doctor's office. Tests are covered by most health plans. Your doctor will follow up with you on lab tests and provide you with information on what to do next. Your child can also have get a free lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

#### **Understanding your child's lead test result.**

**A lead level below 5** means there is a little lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

**A lead level of 5-44** means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead (**over 44**) may require treatment at the hospital.

## What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

### Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call (810) 787-6537 to learn more.
- Use a water filter in your home. Call 2-1-1 for information on free NSF Certified water filters.
- Run only cold water through the filter.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- Use filtered or bottled water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food).
- You can use unfiltered tap water for washing your hands, and washing dishes.
- If you ~~must have~~ to use unfiltered water for drinking or cooking, run the tap for five minutes before using the water.

Formatted: No underline

Formatted: No underline

### Safe cleaning:

Safe Cleaning is important. Keeping your home clean and safe from lead hazards will help to protect your family.

- ~~You can use unfiltered tap water to wipe down countertops, mop floors, and wash clothes.~~
- ~~Buildings built before 1978 could have lead paint in them. Keep children away from lead paint and dust.~~
- Use wet paper towels to clean up lead paint chips and dust in these older buildings. -Be sure to clean around windows, play areas, and floors.
- ~~Wash hands and toys often, using with soap and water.~~
- You can use unfiltered tap water to wipe down countertops, mop floors, and wash clothes.

Formatted: Font: (Default) Times New Roman, 12 pt

### Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

**Calcium Rich Foods**

**Iron Rich Foods**

**Foods with Vitamin C**

- |           |                                    |                 |
|-----------|------------------------------------|-----------------|
| ➤ Milk    | ➤ Beans                            | ➤ Oranges       |
| ➤ Cheese  | ➤ Lean meats like fish and chicken | ➤ Orange juice  |
| ➤ Yogurt  | ➤ Whole grain cereals              | ➤ Grapefruits   |
| ➤ Tofu    | ➤ Peanut butter                    | ➤ Tomatoes      |
| ➤ Spinach |                                    | ➤ Green peppers |

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your doctor who may also recommend a daily multivitamin.

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

**Where can I get more information on lead?**

- Genesee County Health Department Lead Program  
(810) 257-3833

We had a meeting yesterday with my staff, Nancy Peeler, Bob Scott, Corinne and Patti McKane to talk about reporting the blood testing data. The meeting went well and I think we have a plan going forward to produce both a data heavy internal report and a simpler version for the public. We're aiming for a weekly report on Mondays, starting 9/1/15...likely in the afternoon so that we can capture any data from the weekend warehouse updates.

During the meeting Nancy mentioned they were planning to bring on another data entry person with some existing funds in her area (not from the supplemental). Not sure how/if this complicates the move. I do have 3 cubicles immediately available in my area on CVB 4<sup>th</sup> floor.

Dear Governor's Office:

Please provide the following to the Governor as a part of his daily briefing packet. If you have any questions, please let us know.

1. Action Steps Updated Document for the week of October 26-30, 2015
2. Flint Drinking Water Action Plan Update

Thank you.

Dan Wyant  
Director

## City of Flint Water Action Steps for Week of October 26-30

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
1.	Conduct After Action Plan	DEQ	George Krisztian	Initial meeting held 10/22/15
2.	Introduce legislative changes to Part 54 of NREPA – Drinking Water Revolving Loan Fund	DEQ, Treasury, and EPA	Maggie Pallone George Krisztian Sonya Butler	Draft language submitted to Maggie Pallone for review
3.	After Action Review Panel	DEQ	Madhu Anderson George Krisztian Karen Tommasulo	Panel created and press release issued on 10/21/15
4.	Staff hiring plan	DEQ	Jim Sygo Maggie Pallone George Krisztian	
5.	Finalize fiscal year 2017 budget request	DEQ	Maggie Pallone George Krisztian	
6.	Meeting(s) with school staff/management	DEQ	Jim Sygo Steve Busch Pat Cook Mike Prysby	A meeting with the 10 remaining schools is tentatively scheduled for the week of 10/26/15
7.	Meet with DHHS and discuss all lead education material for schools	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	Meeting held on 10/27/15; action items created
8.	Review corrosion control treatment plan and get any EPA comments	DEQ and EPA	Jim Sygo Steve Busch Pat Cook Mike Prysby	Summary of Flint's corrosion control plan submitted to EPA

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
9.	Review construction permit application and issue construction permit for phosphate equipment	DEQ	Jim Sygo Steve Busch Pat Cook Mike Prysby	Additional items provided; still need 2 more items
10.	Review Standby Operation of Flint Water Treatment Plant with city of Flint	DEQ and Flint	Jim Sygo Steve Busch Pat Cook Mike Prysby	Comments by DEQ to city of Flint have been provided
11.	Work with Karegnondi Water Authority (KWA) and other agencies to address bottleneck issues; check weekly for status update	DEQ and KWA	Jim Sygo Steve Busch Pat Cook Mike Prysby	Issues regarding soil erosion controls during construction are being addressed
12.	Contact city of Flint for Service Line Record status update and obtain a copy of the records to date	DEQ and Flint	Jim Sygo Steve Busch Pat Cook Mike Prysby	Cross-referencing process has begun
13.	Provide DHHS with any available cross-reference information	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	
14.	Develop childcare facility guidance or review DHHS-related materials	DEQ and DHHS	Jim Sygo Steve Busch Pat Cook Mike Prysby	Meeting held on 10/27/15; DHHS to provide materials
15.	Create a generic school sampling guidance document for statewide distribution; target audience: schools served by municipal water	DEQ and DLARA	Jim Sygo Steve Busch Richard Benzie	

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
16.	Confirm plumbing assessment and sampling is scheduled for Brownell K-2 STEM Academy and Eisenhower Elementary School	DEQ and DLARA	Jim Sygo Steve Busch Mike Prysby	Tentatively scheduled for 10/30/15

## Flint Drinking Water Action Plan Update

### **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

- DEQ staff met with DHHS staff on October 27 to discuss all lead education material for schools, and action items were created.
- On October 27 DEQ's Lansing District Office received updated dosage, pump specifications, and cut-sheets for phosphate product. A quick glance at the submittal shows most of the requested information has been provided, except for the NSF Standard 60 certification and the maximum dose. Staff will cross-reference the NSF Web site to verify proper certification and maximum dose. If acceptable, DEQ staff will proceed with issuance of the Act 399 permit. Otherwise, the city of Flint's consultant will need to provide the DEQ with the NSF Standard 60 certification and maximum dose information.
- DEQ staff has cross-referenced 46 of the 326 historical lead and copper monitoring sampling sites with the 10,895 service line index card information records available to date.
- DEQ staff met with DHHS staff to review and further develop childcare facility guidance and incorporate drinking water exposure information. Guidance is being provided by DHHS specific to the Genesee County emergency order, and separate guidance for statewide use will also be developed.

#### Additional Actions:

- Preliminary follow-up review of sampling event at Freeman Elementary School: DEQ and DLARA staff met and reviewed outlet/tap materials to correlate with sample results. DEQ staff contacted Jim Henry, Genesee County Health Department, to confirm the location of screening samples. The draft write-up is to be completed by DEQ staff on October 28.
- The weekly meeting between DEQ, DLARA, and DHHS was held. Discussion topics included a review of the results for Freeman Elementary School, along with a discussion of what the results meant and how the data would be presented to the Flint Community Schools Superintendent so that the information could be used to create an action plan for the school. Discussion also included working out the logistics for conducting the plumbing evaluation and subsequent sampling for the other two elementary schools that had results above the action level during the initial screen of 13 schools. Plans are in process to conduct these two plumbing evaluations on Friday, October 30, with the sampling to take place on Saturday, October 31.

15.	Create a generic school sampling guidance document for statewide distribution; target audience: schools served by municipal water	DEQ and DLARA	Jim Sygo Steve Busch Richard Benzie	Final draft of school sampling protocol has been written and is awaiting final review

Step No.	Action Step	Involved Parties	DEQ Point(s) of Contact	Status
16.	Confirm plumbing assessment and sampling is scheduled for Brownell K-2 STEM Academy and Eisenhower Elementary School	DEQ and DLARA	Jim Sygo Steve Busch Mike Prysby	Assessments confirmed and complete

**This Document is a Non-Responsive Attachment.**

## Flint Drinking Water Action Plan Update

### **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

- Comments on the corrosion control treatment plan received late in the day on October 30 from EPA were addressed, and the letter to the city of Flint regarding operational and monitoring conditions related to corrosion control was finalized. A PDF of the letter was e-mailed on October 30 to the city of Flint *et al.*
- Staff from DLARA and DEQ conducted plumbing assessments at both Brownell and Eisenhower Elementary Schools on October 30. Sampling taps were identified and labeled. Based on the plumbing assessment, a sampling sequence was recommended for each school.

#### Additional Actions:

- DEQ Flint Action Plan Coordinator George Krisztian and DEQ Public Information Officer Karen Tommasulo met with representatives of DLARA, DHHS, and city of Flint officials, including Mayor Dayne Walling, to discuss progress made since the last meeting and to discuss actions to come in the week of November 2. Topics included the issuance of a construction permit that would enable the city of Flint to provide supplemental phosphate addition to the water coming from Detroit. A high level summary regarding the progress of the testing for lead in drinking water in the Flint schools was provided with a subsequent discussion by the group as a whole. Mayor Walling inquired as to how remediation of the schools would be funded, and he was informed that funding was outside the purview of the initial assessment.
- Staff from DEQ and DLARA conducted water sampling at Brownell K-2 STEM Academy and Eisenhower Elementary School on Saturday, October 31. In addition, staff went back to Freeman Elementary School to pull sequential samples as per comments from EPA regarding DEQ's sampling protocol. The sequential samples were also taken at Brownell and Eisenhower. Complete sampling protocols have now been conducted at three Flint schools. There were a total of 374 samples taken at the three schools on October 31.
- As provided by DHHS, the purchased total water filter/pitcher distribution for the period of October 6 through October 29 is 9,880 units.

Hi all,

Bob Scott updated me on the upload of child lead data into the warehouse

"As of next Monday, we'll be two weeks behind on Lead records in the Warehouse. Jessica's computer (and everyone's around here) was upgraded to Office 2013 last Friday. ....but Access 2013 will not handle DBF files. We have used Access for a few years as a pass-through to get the DBF format (dates, I think) exactly right for loading to the Warehouse.

When I get back, I'll work with the folks from Optum to see what we can do about getting files in Warehouse-ready format."

Bob will be back next Monday.

I can pull data from the warehouse next Monday, but be aware that it may not be complete.

**Subject:** Update on lead data upload issues.

Hi all,

Bob Scott updated me on the upload of child lead data into the warehouse

“As of next Monday, we’ll be two weeks behind on Lead records in the Warehouse. Jessica’s computer (and everyone’s around here) was upgraded to Office 2013 last Friday. ....but Access 2013 will not handle DBF files. We have used Access for a few years as a pass-through to get the DBF format (dates, I think) exactly right for loading to the Warehouse.

When I get back, I’ll work with the folks from Optum to see what we can do about getting files in Warehouse-ready format.”

Bob will be back next Monday.

I can pull data from the warehouse next Monday, but be aware that it may not be complete.

Patricia McKane, DVM MPH - Manager, Maternal & Child Health Epidemiology Section | Michigan Department of Health and Human Services | Lifecourse Epidemiology and Genomics Division | PO Box 30195 / 201 Townsend St 4<sup>th</sup> Floor - Lansing, MI 48909 | Cell

Dear Governor's Office:

Please provide the following to the Governor as a part of his daily briefing packet. If you have any questions, please let us know.

1. 18-Point Partnering Plan
2. Flint Drinking Water Action Plan Update

As a reminder we will prepare these reports to you weekly, every Monday afternoon, for the previous week's actions.

Thank you.

Dan Wyant  
Director

## **Department of Environmental Quality 18-Point Partnering Plan**

### **1. After Action Plan Frequently Asked Questions will be ready by noon on November 16, 2015**

- First version complete – updated as needed

### **2. School test data**

- School reports to be expedited
- Steve Busch creates summary reports
- George Krisztian creates summary spreadsheets

### **3. Blood exposure**

- DHHS is lead on providing data

### **4. Meeting with Mayor Karen Weaver**

- Harvey Hollins lead – Dan Wyant, Jim Sygo, and George Krisztian to attend

### **5. Messaging our Partnering Plan**

- Provide ongoing public updates regarding Governor's 10-point plan
- Continue emphasis on the availability of free testing for Flint residents
- DEQ's Office of Environmental Assistance to direct the public to the Flint water Web site: [www.mi.gov/flintwater](http://www.mi.gov/flintwater)

### **6. Sampling Protocol**

- Establish alignment with the U.S. Environmental Protection Agency (EPA), Region 5, on sampling protocol

### **7. Lead service line replacement**

- Expand the Revolving Loan Fund directed at lead service line replacement
- Amy Epkey, Maggie Pallone, and Sonya Butler

**8. Partner with EPA**

- Dan Wyant → Susan Hedman
- Jim Sygo → Bob Kaplan
- Mike Prysby and Steve Busch → Darren Lytle and Mike Schock
- George Krisztian → Tom Burke
- DEQ's Office of Drinking Water and Municipal Assistance (ODWMA) staff → EPA, Region 5, staff (Jennifer Crooks and Tom Poy)

**9. Meet with Charles Stewart Mott Foundation to discuss Lead Service Line Identification Study**

**10. Lead Education Program**

- DHHS is the lead on Lead Education Program

**11. Moving Karegnondi Water Authority (KWA) forward**

- Proactive meetings with KWA

**12. Participate actively with Flint Technical Advisory Council**

**13. Utilize Joan Rose and Michigan State University water expertise**

**14. Public outreach**

- Flint Mayor Karen Weaver
- Genesee County Health Department
- Drs. Lawrence Reynolds, Eden Wells, and Matthew Davis
- Ministers
- Land Bank
- Legislators
- Citizens

**15. Outreach to schools**

- EPA guidance on testing
- Work with State Superintendent Brian Whiston
- ODWMA staff to work on literature

**16. Make recommendations to EPA about Lead and Copper Rule**

**17. Compliance Communication letter sent on November 9, 2015**

- Wait until after December 30, 2015

- 18. Enhance coordination with health officials regarding personal health notifications of drinking water issues**

## Flint Drinking Water Action Plan Update

### **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

#### **Key Actions:**

- An 18-Point Partnering Plan was developed to guide DEQ staff on the Flint water issue. The document focuses on areas of concern and identifies key partnerships. The issues in the Partnering Plan address short-term, intermediate term, and long-term goals. This document will be reviewed at least weekly, and actions by DEQ staff with respect to the Partnering Plan will be documented. The Partnering Plan has become a standing agenda item and a central focus for the internal action plan meetings.
- On November 20 the weekly meeting was held at Flint between DEQ staff and city of Flint officials. Mayor Karen Weaver was present at the meeting. This was Mayor Weaver's first time in attendance at the weekly meeting. After introductions were made, Mayor Weaver was given an overview of the data from the free homeowner's testing. Mayor Weaver was informed that the samples were from any Flint resident who wished to have their water tested and, as such, were not necessarily representative of the site selection criteria as specified in the lead and copper rule, but with that said, the results were encouraging. Mayor Weaver was informed that over 3/4 of the samples had results of 5 parts per billion (ppb) or less and that approximately 92 percent of the sample results were at 15 ppb or less. It was also stressed to Mayor Weaver that, although the results were encouraging, there were also pockets of concern where the lead levels in the drinking water were significantly above 15 ppb.

There was also discussion about making sure that water sample results were kept in context. In order for an individual to be sure with respect to their exposure to lead, they should have their blood tested. Individuals with an elevated blood level (EBL) would then be encouraged to have an EBL investigation done to evaluate all potential exposure pathways. There was then discussion as to what the EBL investigation entailed and how the water testing was being incorporated into the EBL.

The meeting ended with an invitation by the DEQ to Mayor Weaver to come tour the DEQ's Laboratory to see first-hand how samples were analyzed. Mayor Weaver indicated that she would be very interested in a tour and that a date would be set up.

#### **Positions:**

- There are no new positions to report since last week.

## **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

### Flint Drinking Water Action Plan Update

Page 2

#### **Concerns:**

- There are no new concerns to report since last week.

#### **Significant Events:**

- A Frequently Asked Questions document was provided to the Governor's Flint Water Task Force (Task Force) on November 16. DEQ staff subsequently met with the Task Force on November 18.

#### **Changes from Previous Report:**

- DEQ staff provided comments on the final draft of the DHHS protocol for EBL investigations. The sampling protocol will utilize 14 drinking water samples that will be used to identify potential sources of exposure to lead located in the plumbing system of residential dwellings.
- DEQ staff provided comment on the draft sampling protocol that the city of Flint is proposing to use for compliance monitoring for the lead and copper rule. This document has been forwarded to staff at the U.S. Environmental Protection Agency (EPA) for additional comment.
- On November 19 DEQ staff contacted EPA staff via e-mail regarding a request by the city of Flint for guidance on a corrosion control treatment evaluation for Karegnondi Water Authority source water use at the Flint Water Treatment Plant. A meeting has been scheduled for December 11 to discuss the issue with all parties.
- DEQ and DLARA staff conducted a plumbing assessment of Neithercut Elementary School in Flint on November 20.
- DEQ and DLARA staff conducted school sampling at Neithercut Elementary School in Flint on Saturday, November 21.
- A draft report for Eisenhower Elementary School was completed and is awaiting final publishing and will then be posted to the Flint water Web site: [www.mi.gov/flintwater](http://www.mi.gov/flintwater).
- Draft reports for Brownell K-2 STEM Academy and Pierce Elementary Schools are in progress and near completion.
- DEQ staff has been in meetings with the Office of the Auditor General audit team and have provided information and documentation as requested.

This would be a new item. Add under healthcare provider section...Sue/Eden edit if necessary.

Moran, Wells and Miller met with Medicaid health plan staff on December 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs. Medicaid also suggested inviting Dr. Wells to speak about Flint at a future meeting with Medicaid health plan medical directors. Medicaid identified three individuals to partner with epidemiology staff to develop a roster of Flint children enrolled in Medicaid to provide more precise estimates on the percentage of Flint children enrolled in Medicaid who receive EBL testing.

## Flint Water Lead Project

### Michigan Department of Health and Human Services Situation Report for December 2, 2015

**\*\*NOTE: Contains potentially Identifiable Information- REDACT AS INDICATED\*\***

**New items for the day listed first and in bold print.**

**Daily Briefing and Situation Report** prepared by Linda Dykema

**Surveillance Indicators:** People Tested since 10/1/2015: 1,361;

Children less than 6 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 15

Children 6 to 17 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 6

Adults 18 years and older  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 9

**Severity Indicators:** Hospitalized/Discharged-1/1; Deaths- 0

#### DAILY ACTIVITY SUMMARY

**Elevated Blood Level (EBL) Environmental Investigations** – ETC Contractors, Wes Priem, Courtney Wisinski

- **3 EBL investigations completed.**
- 8 investigations scheduled.
- The high EBL home is scheduled for Friday 12/4/15.

**MDHHS/Genesee County Health Department (GCHD) Case Management (CM) Services** – Nancy Peeler

- CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with high EBL, per our Nursing protocol. Second lab report received, confirming that his BLL had dropped from 52 to 36  $\mu\text{g}/\text{dl}$ . GCHD Nurse reports that the child's lead level has decreased to 20  $\mu\text{g}/\text{dl}$ , but the lab report has not yet been received at HHS.
- Received calls from Rep. Neely's office regarding an upcoming Health Fair, asking about CLPPP participation or provision of materials (may be on December 15th at a Methodist church?). Suggested that GCHD staff as their best contact: shared with GCHD as they may receive a call.
- CM report through 11/25/15:
  - # of contacts attempted: 136
  - # offered CM: 46
  - # CM started: 5
  - # of children receiving CM who live in Flint: 5
  - # billed to Medicaid: 5
  - # Other disposition: 2 (2 children moved to Oakland County)

**Epidemiology/Surveillance** – Patti McKane, Martha Stanbury, Bob Scott, Jessica Cooper, Karen Lishinski

- Established protocol for notifying HHS staff and GCHD about Flint EBL children. Master list will be compiled on Monday and HHS staff and GCHD who will track their CM activities re these children and report back to HHS on Friday.

**Filter Distribution** Sheryl Thompson

|--|---|

#### **Communications/Information Sharing** – Linda Dykema, Eden Wells

- Linda Dykema received call from Dr. Mark Johnson, ATSDR R5 Senior Regional Representative and CDC main point of contact. Provided an update on HHS activities.
- Wes Priem attended a Michigan Community Development Directors' conference on housing where he talked with Susan Wilcox, Manager for Flint Community and Economic Development Program. She will schedule a meeting with HHS staff to discuss application of the Landlord Penalty Law in city of Flint.
- Weekly (Tues. 8:00 am) coordination call with DEQ/LARA/HHS. Discussed need for informational materials for schools/residents regarding lead free plumbing replacements.
- Technical Advisory Committee meeting originally scheduled for December 9<sup>th</sup> - , then postponed by City of Flint, may actually take place: awaiting word from City.

#### **Health Education Resources Updates** - Michelle Bruneau, Emily Houk

- Met with Liane Shekter-Smith (MDEQ), Steve Busch (MDEQ), Kory Groetsch (MDHHS), and Jennifer Gray (MDHHS) to discuss Phosphate Fact Sheet; changes forthcoming
- Coordinating meeting with GCHD and MDHHS to discuss phosphate dosing and potential health implications
- Sent out draft of "Bath Time" fact sheet to MDHHS and GCHD for review reiterating that it's safe for adults and children to bathe in Flint tap water; requested quote via Eden from Dr. Mona Hanna-Attisha
- Continuing to write and coordinate additions to the EBL Case Manager Binder, now known as the MDHHS Lead Safe Family Guide Book.
- Pending: Aerator/Filter Maintenance Fact Sheet; Flint Parent Letter re-do in partnership with Emily Houk.

#### **Toxicology** - Kory Groetsch, Jennifer Gray, Lisa Quiggle

- Working with GCHD and DEQ to address questions concerning impact of phosphate treatment on drinking water filters.
- Working with Healthy Homes Section staff to revise EBL report for Flint Residents.

#### **WIC**

- Letter sent 11/24 to GCHD about Ready-to-feed formula availability from WIC program
- Talking points for WIC staff and for providers shared

#### **Healthcare/Providers**

- Moran, Wells and Miller met with Medicaid health plan staff 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs and suggested inviting Dr. Wells to speak to Medicaid health plan medical directors.
- Medicaid identified three individuals to partner with epidemiology staff to develop a roster of Flint children enrolled in Medicaid to provide more precise estimates on the percentage of Flint children enrolled in Medicaid who receive EBL testing.
- Forum for primary care providers in Flint POSTPONED pending coordination with local providers
- WIC information to be shared by GCHD to providers

**DEQ Information** - Linda Dykema as Liaison

- MDEQ would like to issue school drinking water testing results in coordination with MDHHS release of the blood lead test reporting.

**Cc:** Grijalva, Nancy (DHHS); Wells, Eden (DHHS); Dykema, Linda D. (DHHS)  
**Subject:** Call with Matt Davis

We had a great call with Matt, overall seemed very supportive of our recent efforts and intends to modify the letter to the Governor based on actions taken by MDHHS.

Highlights from our discussion:

- VERY PLEASED with today's release of information regarding lead testing
- Matt supportive of our ICS-like structure (with project managed by Division of Environmental Health) – very much in line with centralized coordination and communication
- Agrees with our proposal to use Medicaid population denominator as proxy for measuring progress in accelerating lead testing efforts
- VERY pleased with the efforts to partner with, engage Medicaid Health Plans in the public health response
- Had some suggestions for using MCIR as a tool to link children and their school districts to determine potential lead exposure
- Agrees there is lack of consensus among community providers about testing infants, but Eden/Sue/Matt agree that there must be a risk assessment for lead exposure from water, infants are at highest risk for adverse effects.

Please let me know if you have questions.

**Subject:** flint sitrep 12/7/15

On duty: Martha Stanbury, Bob Scott, Jessica Cooper

- In response to a request from a reporter for lead surveillance data for the state of Michigan by zip code, there were communications between the epidemiology and surveillance management staff about case definitions and data suppression, to ensure that data analysis between what was released to the public and data that will be released in response to this request are as consistent as possible and that confidentiality is maintained. The data should be ready tomorrow.
- In response to a request from the research team at Hurley medical center for BLL data on children in Flint reported after September 15, we will be adding an amendment to the existing Data Use Agreement. We will be talking with the team on Wednesday to be sure we are clear on what they are asking, and to ensure that the request is within the scope of their IRB approval.
- A weekly report on activities at GCHD to follow up on children with elevated BLLs was received today. This spreadsheet will continue to be updated on a weekly basis. The numbers of children needing follow-up has gone down from 183 to 169, because confirmatory venous tests have been received that are below 5 ug/dl.

Not right away. I brought it up in the 12:30 meeting yesterday with Geralyn...I'm not certain I got an answer, but I said I would look at the DEQ school reports to see what language they used. I'll follow through with that on Monday and also refresh my memory of the details in our technical support document for the modeling before I ask for an ok to share.

Sue,

You can find recent data on blood lead testing in Flint at this website: [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater). Please bear in mind that with the recent upswing in testing, including many children a bit older than the usual target ages, the findings may be a bit different from usual.

Thanks,  
Bob

Hello Sue.

I am passing your request to Bob Scott who may be able to answer your question. However he will need to know specifically what you need. I know he is swamped so if your request is for personal curiosity it may be a lower priority for him as we are really busy pulling together information to help the community at this time...I know you will understand....

FLINT's GHHI site is non-existent at this point.

I am well and good this with all this attention!

Hope you are doing well as well.

**Subject:** CLEARCorps

Hi Wes,

I imagine that the Flint disaster is keeping the state lead programs busy. The newspaper only talks about the increased number of children who are testing positive for lead but they have not said anything about what the average lead levels are. Do you have any idea what they are finding? Is there someone else that I should be asking this question to?

Isn't Flint one of Ruth Ann's cities?

Hope that you are well.

Sue

Dear Governor's Office:

Please provide the following to the Governor as a part of his daily briefing packet. If you have any questions, please let us know.

- Flint Drinking Water Action Plan Update
- EPA's December 16, 2015, e-mail to the city of Flint
- MSU Extension release regarding nutrition and lead

As a reminder we will prepare these reports to you weekly, every Monday afternoon, for the previous week's actions.

Thank you.

Dan Wyant  
Director

## Flint Drinking Water Action Plan Update

### **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

#### **Key Actions:**

DEQ staff set aside additional time this week to address the backlog of FOIA legislative requests.

A conference call with staff from the DEQ, U.S. Environmental Protection Agency (EPA), and city of Flint was held on December 15, 2015, to discuss the transition to the Karegnondi Water Authority (KWA) as the city's source of drinking water. The EPA indicated that they would provide written recommendations regarding the actions that Flint should take prior to switching to the KWA.

On December 18, 2015, staff from the DEQ and DLARA conducted an initial plumbing evaluation of Flint Community Schools' Northwestern High School and Southwestern Classical Academy. These two schools are scheduled for a final evaluation and subsequent sampling during the week of December 28, 2015. Due to the extracurricular activities that typically take place on the weekends, it was determined that the best time to conduct the sampling would be during the winter school break.

#### **Positions:**

There are no new positions to report since last week.

#### **Concern:**

On December 16, 2015, the EPA sent an e-mail to Flint City Administrator, Natasha Henderson, outlining the recommended precautionary measures for Flint to implement prior to switching to the KWA for their source water. The list of recommendations is very broad in nature and could potentially costs millions of dollars to implement. In addition, the recommendations could potentially delay the switch to the KWA by several months. Given the costs associated with implementing these measures, the city of Flint will be working to set up a meeting with Harvey Hollins and George Krisztian to discuss funding options, including asking the EPA for assistance.

#### **Significant Event:**

The DEQ has assigned Eric Pocan, Office of Drinking Water and Municipal Assistance, to serve as the project manager to assist the city of Flint with providing the documentation necessary for the city to apply for loans under the Drinking Water Revolving Loan Fund. A time line outlining the various steps in the process has been given to the city of Flint to assist them in ensuring that all requisite documents are generated and submitted within the necessary deadlines. Additional follow-up meetings will be held to assist the city with any issues related to the submission of the required documentation.

## **FOIA EXEMPT AND ATTORNEY-CLIENT PRIVILEGE**

Flint Drinking Water Action Plan Update

Page 2

### **Changes from Previous Report:**

- Final plumbing assessment reports for Pierce Elementary and Doyle/Ryder Elementary Schools are being prepared. Staff from the DEQ, Office of Environmental Assistance, are being trained to assist with the preparation of the reports in order to reduce the turnaround time.
- The MSU Extension provided a release regarding nutrition and lead. The release provides resources for utilizing nutrition to lessen the effects of lead exposure.
- Staff from the DEQ met with staff from the city of Flint on December 18, 2015, to discuss the recommendations made by the EPA earlier in the week. The city expressed concern that EPA's recommendations went beyond the requirements of the Lead and Copper Rule. It was agreed that further discussion needed to occur to determine how these recommendations could be funded.
- Staff from the DEQ met with the Michigan Association for Local Public Health (MALPH). One of the main topics of conversation was the Flint water situation. Members of MALPH expressed concern that the lead exposure issues were not unique to Flint and that, based on the recent article in *Bridge Magazine*, the issue was statewide and there were areas in the state that had significantly high lead exposure levels.

### **Other Items:**

Attached is the EPA's December 16, 2015, e-mail to the city of Flint, including the document entitled, "Task Force Recommendations Regarding Flint Drinking Water Treatment Performance Evaluation."

Attached is the MSU Extension release.

**Subject:** EPA Flint Drinking Water Task Force Recommendations -- Performance Evaluation Period

Natasha,

Attached please find the EPA Flint Drinking Water Task Force Recommendations for a Performance Evaluation Period.

As we discussed on December 11 and December 15, it is important to gain operational experience at the Flint Plant prior to distribution of KWA-sourced water. We have informally referred to this as a "shakedown" period for ensuring a safe and appropriate transition to the new water source.

Please feel free to call me if you have any questions. We are pleased to continue to work together.

- Bob

Cc: Jim Sygo, MDEQ

## Flint Drinking Water Task Force (FTF 15-5)

### Task Force Recommendations Regarding Flint Drinking Water Treatment Performance Evaluation

For protection of public health, Flint must avoid significant distribution system issues similar to those experienced following the source water switch to the Flint River and subsequent operation of Flint's water treatment plant.

The EPA Flint Safe Drinking Water Task Force recommends that Flint develop and implement a Performance Assessment Plan prior to distribution of water from the Karegnondi Water Authority (KWA) source. The plan must address how the treatment plant will be brought on-line, and how finished drinking water will be introduced to the distribution system. This plan is particularly important given the City has no experience treating the KWA-supplied water, and is operating a distribution system that is still recovering from the past upset.

Flint should work with its consultant and MDEQ to establish objective water quality and plant performance criteria. The plan must include operation of Flint's drinking water treatment plant for a reasonable period of time to treat KWA-supplied water until:

- (1) the treated water meets finished water quality goals;
- (2) the finished water quality is consistently maintained;
- (3) potential plant operational and mechanical start-up issues are identified and addressed; and
- (4) water plant operations staff are proficient in treating the new source.

KWA water should not be distributed to the public until these conditions are satisfied.

During this performance evaluation period, Flint must distribute to the public water from an alternate source. As water is already received from Detroit (Great Lakes Water Authority), that is an obvious and appropriate choice for that interim period. The length of the performance evaluation period will be dependent on the amount of time it takes for the treatment plant to consistently and reliably meet the performance criteria.

Because of similarities in source water and in treatment processes with Detroit's Huron plant, the Flint water plant will likely be configured to produce treated water with similar quality to that of the water currently being received from Detroit. Continued use of Detroit water during the performance evaluation period will minimize the risk of distribution system upsets.

We encourage Flint and the City's consultant to perform a number of assessments prior to the completion of the KWA pipeline and availability of the Lake Huron source water to expedite the plant transition period. For example, the planned bench-scale jar tests will be helpful in establishing full-scale treatment plant operating parameters. Assessment of corrosion control treatment using Detroit source water with lead pipe loop rigs in advance of switching to the KWA source may also be transferrable to the KWA source water. Pipe loops rigs operated during the performance assessment period will help predict whether lead release will be an issue when the new plant goes on line. EPA will work with the City to set up pipe loops at the Flint treatment plant.

Support local and county efforts to educate providers about Lead monitoring and follow up protocols.

We want to coordinate with health dept and medical society on these efforts- Eden feel free to add.

Fyl- there are many kids who have a capillary ( finger prick) test, but not a venous blood test, which is the next step in protocol.

**Importance:** High

Dear Governor,

Below are our 26 action steps we are working on:

## **26 Action Steps for Next Week, October 12-16, 2015**

1. Identify schools and prioritize for assessment
2. Get DLARA plumbers organized
3. Complete sampling instructions
4. MDARD info for restaurants
5. Update 2004 letter to EPA
6. Approve Flint plan for water line
7. Lead education plan for schools for Drinking Water
8. Begin regular meetings with Flint
9. Schedule WTP tour
10. Meet with schools and DLARA-invitation only
11. Update Web page
12. Contact DHHS to see where they are with United Way
13. Circulate protocol draft with EPA
14. Contact City about homeowner sample delivery
15. Communicate to MDARD and City that business samples should be coordinated through lab
16. Figure out number of samples from schools and child care facilities
17. Confirm Lynda Dykema is POC for DHHS
18. Contact KWA to find out if there are any bottlenecks we need to remove
19. Expedite 399 Plan and Phosphate Plan
20. Get update on service line index card conversion and identify where partial replacements exist
21. Make sure DHHS gets info so they can cross reference
22. Legislative contacts
23. Legislative time line and summary
24. Dan reconnect with state superintendent

- 25. Conduct After Action Plan
- 26. Change Part 54-Drinking Water Revolving Loan Fund

If you have any questions, please let me know.

Dan Wyant  
Director

**Subject:** Plan

The Director has approved the attached plan and you are free to move forward with providing it to the Genesee County Health Department.

This version differs slightly from the version Eden sent as I cleaned up some acronyms and removed the date at the top of the page as it doesn't seem to be needed as you have an updated time for version control. I also changed the last point under communications because it just read "send resources to Flint" which could have been misinterpreted.

Thanks--g

Hi Mark and Nancy,

We need the information for this project in order to add this to the Genesee County Health Department agreement.

Please provide the project title, amount, and Attachment III language for this project. Please send this information to our mailbox as well as the budget liaison.

Please let me know if there will be a delay in forwarding this information.

Thank you,

Jeanette

Rashmi wants us to insert metrics into the contract, just haven't had a chance to even think about that yet. Tomorrow. But if you are otherwise OK with the language, we didn't miss anything you think needs to be in there, then we're a step closer.

Nancy, if we give the below talking points to Eden, are they accurate?

I think these would be some talking points for Eden:

The governor signed the legislation for funding on Oct. 15<sup>th</sup>.

Contracts were negotiated and in place by Oct. 23<sup>rd</sup>.

GCHD hired 2.5 staff and trained them by Nov. 10<sup>th</sup>; staff have begun to contact children and offer/conduct case management services.

There are 163 children with elevated blood lead levels reported since April 2014. Staff just started, but have contacted 5 families to offer case management, and have conducted case management on one of those cases (as of 11/13/15).

We expect these numbers to grow in the coming weeks.

As below, Mikelle and I chatted. I'll talk to Valacak this AM on options, but Mikelle figured we could just have Oakland (or whomever) send us a voucher for the time, and we'll pay it out of our PH&AS general funds \$'s. Shouldn't be too many of them.

After you get with Karen, give me a call to consult, then I can try to cut a deal with the Health Officer in Oakland.

Mark

**Subject:** RE: case management for children with elevated blood Pb levels identified outside of Genesee County

Well, I'm not surprised. We didn't retain any of the Flint CM funding -- sent it all to Genesee - so we don't have that source to pay another county for this work.

Right now there are 2 kids, not sure if GCHD will find more. Probably a few, but my guess is it won't be a high number.

If the child is on Medicaid, yes it is billable to Medicaid, and that should always be the first fund source. Oakland does not bill Medicaid, regardless.

I will have to get with Karen to get info on what Oakland currently does to respond to EBL cases, e.g. at what level do they send a letter vs. send out a nurse, etc. It is different for every county, so I want to make sure I get you accurate information.

What we currently do in Oakland is that Surveillance sends them their weekly data file of lead results, and they invoke their own policy about how they will respond (or not). Remembering that Oakland will have no idea if a child previously lived in Flint, unless we identify that for them.

I agree, we'll have to think about alternate fund sources.

**Subject:** case management for children with elevated blood Pb levels identified outside of Genesee County

I chatted with GCHD; they weren't too enamored with our idea to have OCHD bill them. I told Mark V. I'd think of some more ideas and call him tomorrow. Mikelle figured if the #'s are low we'd just have them bill us.....

So how many do we think we'll have in this fiscal year?

What would the bill be for case management? How would that be reduced if the child was on Medicaid?

Are there nurses in Oakland who can do case management? If so, I can probably work out a deal with the HO, especially if we can pay them.

How would we normally handle a kid ID'ed in Oakland with an elevated blood Pb level?

**Cc:** Stanbury, Martha (DHHS) <stanburym@michigan.gov>  
**Subject:** RE: For your review (Hurley amendment)

Hello Bob and Martha,

I want to send a note right away as I'm actually not sure this proposed revision is as straight forward as I thought it might be earlier (when I spoke with Martha). This IRB application was approved while thinking of this research as retrospective and involving data that had already been collected. Our IRB approved of the research with a waiver of the requirement for informed consent and a waiver of authorization for the Department to disclose protected health information to Hurley. The justification that permitted approval of those waivers (attached) included the following language:

"This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)"

This language doesn't clearly support a waiver that pertains to prospective data collection. Although the issue of a biased sample may still be compelling, problems with contact information being outdated or wrong are not applicable if the potential to interact with subjects at the time of lead testing is present (that is, if the test hasn't occurred yet).

This isn't to say that a waiver of informed consent or a waiver of authorization to disclose protected health information isn't possible, but a new justification that accounts for the fact that the desired data is now to be collected prospectively is necessary. Our IRB requests that the attached document be updated to reflect this change in the research. It appears that for potentially 75% of subjects, the researcher/her institution will have an opportunity at the time blood is sampled

to obtain informed consent and authorization from Hurley patients (or parents) for the use of the test result and other patient information (address specifically) in research. If a consent process is appropriate, one should be proposed. Alternatively, a justification for why that can't occur, and/or why MDHHS must still provide identifiable data to the researcher without authorization from subjects is needed for the research to proceed.

I'm available and very willing to discuss any questions related to this. I certainly understand the interest in making data available to study this important issue. I'm also sensitive that children involved in this research have rights under the Common Rule regulations/HIPAA that prohibit the use of their identifiable information in research without consent of a parent, or without an approved waiver of the requirement for informed consent. Aside from having the researcher respond with an informed consent proposal or a revised version of the attached document, let me know if you have questions or concerns at this point.

Thank you,  
-Ian

Robert L. Scott  
Childhood Lead Poisoning Prevention Program  
Michigan Department of Health & Human Services  
(517) 335-8178  
fax (517) 335-8509

**Study Title:** Analysis of Pediatric Blood Lead Levels in Flint, MI

**Responsible Department Employee:** Robert L. Scott

**Primary Investigator:** Mona Hanna-Attisha MD MPH

**Research Staff Requiring Access to Protected Health Information (PHI):**

Mona Hanna-Attisha MD, MPH; Jenny LaChance MS; Richard Sadler PhD; Allison Schnepf MD

**Name(s) of Covered Entity(ies) and Location(s) Where PHI Will Be Reviewed:**

--Hurley Medical Center, One Hurley Plaza, Flint, MI 48503

--Division of Public Health, College of Human Medicine, Michigan State University, 200 East 1st Street Room 337, Flint, MI 48502

**PHI Required and Intended Use:**

Child ID number, date of birth, date of blood draw, address with zip code.

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch (pre/post).

Address with zipcode is needed for GIS (geographic information system) analysis and to determine if child lives in potentially high risk area for lead.

**Does the use or disclosure of the PHI involve more than minimal risk to the privacy of the potential subjects? (please select one answer) ☐ YES ☒ NO**

Data will be sent to researchers using secure email transfer from State of Michigan system. Data will be kept very secure through the use of encrypted thumb drives (or on hospital secure computers in individual researchers' offices) and only seen by 4 researchers. Data will be with one of the researchers or in a locked office at all times. Identifiers will be removed for files for analysis as not needed and all identifiable data destroyed once not needed.

**Describe your plan to destroy identifiers at the earliest opportunity consistent with conducting the research. (All identifier links must be destroyed for minimal risk research. For other research, unless there is a health or research justification for retaining the identifiers or such retention is otherwise required by law. If retention of identifiers is required, explain the reason and indicate that the identifiers will be stored and retained.)**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results. Once duplicates have been removed, child ID number will be deleted from raw data file.

Date of birth is required so we can determine the age of the child at time of blood lead level. Date of birth will be removed from the raw data file once the age has been calculated.

Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post (or other time period) based on other information learned or requests from others.

Addresses must be kept with raw data file and GIS analysis file as these are the basis for the GIS analysis. GIS software uses addresses in its calculations. Addresses will be destroyed 1 year post final dissemination as this allows time for other researchers to question work (i.e., peer response) and for us to produce other information if necessary based on commentary/questions. After 1 year post dissemination, only GIS maps that were created will be kept.

**Describe your plan to adequately protect the identifiers from improper use and disclosure (Check all that apply and explain other protective measures you will use):**

- X Names and other direct identifiers of individuals will be removed at the earliest possible time if consistent with research design
- X Protected health information (PHI) will be kept in locked storage when not in use
- X Records of research subjects or potential subjects will be kept separate from other patient records
- X Access to records will be restricted to those persons directly involved in the research
- NA Records of individuals not selected to participate in research will be destroyed as soon as possible
- X If researcher discloses PHI to a third party (e.g. a research sponsor, data analyst, centralized database, etc.) researcher has received written assurances that the third party will maintain confidentiality of the PHI

**Describe why the study could not practicably be conducted without access to and use of the protected health information (PHI) requested:**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch.

Address with zipcode is needed for GIS analysis and to determine if child lives in potentially high risk area for lead

All of the above are needed to assess the change in lead levels in children in Flint, MI. Without each of these elements, we wouldn't be able to assess the impact of the water

source changes. Without the Child ID number we wouldn't be able to remove duplicates from the data. Without date of birth (and date of blood draw), we wouldn't know the child's age at time of blood draw. Without the date of blood draw, we wouldn't be able to determine if the child's lead level represents the pre or post time period in relation to the initial water switch or, if from after the switch back to Lake Huron water, when in relation to the switch back to Lake Huron water. Finally, without the addresses, we wouldn't be able to use GIS software to examine the trends and patterns of blood lead levels in the city and how they may have changed pre/post/follow up the water switch. The addresses are especially important as these can also help guide efforts for change and interventions in specific areas and may allow us to see the relation to lead service lines (once that information is available from City of Flint.)

**Describe why the study could not practicably be conducted without this Waiver of Authorization:**

We have revised our study methods (and revised our study proposal) so that we are now collecting data prospectively. We have revised this Waiver of Authorization accordingly. Without the waiver, we could not identify if the child lived in an area with Flint water, if the child was younger and therefore potentially more vulnerable, if the data is unique lead result for 1 child. Finally, without the waiver we would not be able to determine the water conditions (source and timing from change of sources) at the lead value.

Our revised study could not be practically conducted without this Waiver of Authorization. The research proposal that initially was approved by the MDHHS IRB was a retrospective study of the association between lead in the Flint water system and blood lead levels of children potentially exposed to lead via the water system. We are requesting an amendment to this project to extend our analysis prospectively in order to be able to track trends in children's blood lead levels as the water system undergoes changes to lower lead levels. We are requesting that the waiver of consent be continued under this amendment for the following reasons:

- 1) The study continues to involve no more than minimal risk to the subjects.
- 2) The waiver will continue to not adversely affect the rights and welfare of the subjects.
- 3) The research could not practicably be carried out without the waiver. The research is designed to use population-based data on ALL children with blood lead tests within the geographic area, which is available from the MDHHS laboratory-based registry of children's blood lead tests, to track trends over time and associate trends with water provided by the Flint public water supply system. The IRB has already agreed that efforts to obtain consent retrospectively would have been infeasible and has granted the waiver. Prospective data on children's blood lead levels is necessary to have a complete picture of the relationship of lead in the Flint water system and trends in children's blood lead levels. This is because of changes instituted in the source of water and its treatment in October 2015, and additional changes that will be implemented in the future. Although it is theoretically possible to request consent from the parents/guardians of the children who come in the future to Hurley Medical Center for their blood lead test, the effort to obtain consent, in person, would be very difficult to coordinate among the multiple practitioners at the Center and thus it can be anticipated

that written consent would be missing from a significant number of tested children at Hurley. Furthermore, 25% of children tested for lead in Flint are tested outside of the Hurley Medical Center, including children whose blood lead tests are ordered by a practitioner outside of the Hurley system, children tested in WIC clinics, and children tested in clinics run by the Genesee County Health Department and other venues. It would be nearly impossible logistically and with existing resources to establish a process to request consent at the time of testing in these venues. Not having the full counts of all children tested for the duration of the study (i.e. population-based from the start to the end of the study) would introduce bias into the study results, make it impossible to track trends over time from the start date of the study until the time in the future when the water system problems have been corrected, and invalidate statistical methods used to track these time trends. It should be emphasized that the minimal amount of Protected Health Information requested from the MDHHS childhood lead registry is used only to identify the same child with multiple blood lead test results, assign age, in years, to each child tested, and for mapping of areas within Flint that are high risk for lead poisoned children. These identifiers will be removed when no longer needed for data analysis, except for address which will kept for 1 year post final dissemination.

**Statement of the Primary Investigator:**

I affirm that:

- The requested access, use or disclosure of PHI is necessary for the purposes of the proposed research;
- The requested access, use or disclosure of PHI is solely for the purpose for which waiver is being requested;
- The waiver of authorization will not adversely affect the welfare or privacy rights of the research subjects;
- The benefits of research outweigh the risks to the privacy rights of the research subjects;
- The requested information constitutes the minimum necessary data to accomplish the goals of the research; and,
- The protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for the authorized oversight of the research study, or for other research for which the use or disclosure of protected health information would be permitted by the HIPAA Privacy Rule.

It is true that those old reports do have unsuppressed data by zip code. Colin has weighed in recently on this with Bob Scott, so Bob has told me, advising that this should change. I support the need to implement a set of suppression rules for CLPP data. Coincidentally, Corinne recently convened a workgroup to discuss the issue of data suppression for all of the BOE surveillance systems. (Note: different surveillance programs use different rules, for various reasons). We will need to discuss this issue with Corinne and, I would assume, Colin, and come up with an appropriate set of rules for CLPP before we release 2014 zipcode level counts.

So does what the HHS privacy officer is telling us apply to the reports that have been posted on our website for some time with 2012 and 2013 data? I am not sure those tables that are currently posted have suppressed data.

[http://www.michigan.gov/documents/mdhhs/CLPPP\\_2013\\_Data\\_Report\\_502175\\_7.pdf](http://www.michigan.gov/documents/mdhhs/CLPPP_2013_Data_Report_502175_7.pdf)

**Subject:** RE: 2014 lead data

**Importance:** High

Okay! If the reporter is asking for 2014 zip code data for the state, here is the answer:

- <!--[if !supportLists]--><!--[endif]-->We have those data – de-duplicated by year (as was the report for the Gov’s office), BUT
- <!--[if !supportLists]--><!--[endif]-->Only for cases that were confirmed by a venous blood draw (would not include capillary finger pokes that were included in the counts for the Gov’s office, so the counts would not match), AND
- <!--[if !supportLists]--><!--[endif]-->Many of the zip codes have a very small number of cases, so we would have to suppress the data for those zip codes per Colin Boes, HHS privacy officer.

The history behind the case definition is a longer story, but if we want to provide zip code data that matches the data provided in the “one-pager” that is now 3 pages, it will take time. Not sure how much until Patti McKane is involved.

**Importance:** High

Well, let us know today what the timeframe is on the 2014 CLPPP zip code level data so we can answer the reporter. IF the answer is simply “it is still being worked on and I don’t have a release date yet” that is fine, but someone needs to get us an answer today.

**Subject:** Re: 2014 lead data

Thanks Linda, but the media call originated in our office.

the bigger issue here is this is data that is routinely available on the MDHHS web site and before the '14 data is posted and/or provided to a reporter, we want to ensure that the program and Epi agree it is correct. I would not want to be in a situation where epi looks at the past data posted and says "we don't think that is accurate".

**Subject:** FW: 2014 lead data

All –

A reporter with Bridge Magazine is requesting the statewide 2014 (and if possible, 2015) CLPPP data. Bob sent me the attached county-level info for 2014 which I have not shared yet, as it's not the final report.

We would like to touch base to make sure the data has been finalized and reviewed by epi before it's posted online.

Eden – we'll reach out to you in the morning to discuss the media request. Beyond the data, the reporter is also interested in discussing home lead investigations.

**Subject:** RE: PDF map of flint

If the observations are geocoded to the street address, I would be uncomfortable sharing it as part of a public presentation except under three options:

- 1) The "point" is randomized. That can be done and still preserve clustering, which is what I think the county wants to show. The map label can indicate that the locations have been adjusted for confidentiality purposes. Someone on the fifth floor could help with randomization if needed.
- 2) Have attendees sign a confidentiality agreement but that is not going to be possible if there are more than a handful in the audience.
- 3) Show the map for a limited amount of time but attendees are not provided a hard copy and the map is not posted on a web site.

It helps that the data cover multiple years.

Option 1 is preferred for a public presentation. Option 3 is also doable. If the presentation is just to health department staff I don't see a problem in presenting the information as is.

**Attachments:** flint 121015.pdf; Flint Randomized 12162015.pdf

Martha and Bob,

Attached is the map of Flint with points randomized by zip code, meaning I calculated the # of cases with BLL between 5 and 9 ug/dL (inclusive) and with BLL  $\geq 10$  ug/dL for each zip code and plotted the same number of cases per zip code in random locations within the zip code boundary. Unfortunately, as we originally suspected, the clustering of cases depicted in the original map (also attached) is lost with this randomization.

Junaid

**PHI**

# Flint Area Children with Elevated Blood Lead Levels 2010-2014

- Child w/ BLL 5 to 9 ug/dL  
(Randomized by ZIP)
- ⊗ Child w/ confirmed BLL  $\geq 10$  ug/dL  
(Randomized by ZIP)

Sherry,

I forgot to ask about this (the map for Toni) on our call yesterday. Has she already done the presentation?

It was deemed that the points on the map should be somewhat randomized to protect privacy. One of my colleagues made a first attempt at that, but it spread them out so evenly as to be pointless. (no pun intended) He's going to try again.

Please let me know whether you need a map or not. He'll probably keep working anyway, to learn more for future requests.

Thanks,  
Bob

Sherry,

Can you tell me what the map will be used for? If it will stay internal to GCHD, no problem. But if you're planning to display it to an outside audience, there may be a problem regarding confidentiality. (Even though the map will be similar to last year's, there is more and more attention to what goes out these days.)

Thanks,  
Bob

Subject: data question

Good morning, Bob. I wondered if you can help me with some data that would provide context for an email that I need to send to Sue Moran this morning. She asked about how many children had EBLs higher than 40 during FY2015. Is that something you could easily tell me?

Also, if memory serves, before November, the last child in Genesee County with an EBL above 40 was back in 2009. Is that accurate?

Thanks for any help you can give me with this; I appreciate it! I know you are headed out to Genesee County for the training, hoping this is an easy question that won't delay your departure. Certainly call me if that is easier - 517-243-6635.

Nancy

**Attachments:** Flint EBL 2010-2014 Randomized 2015Dec22.pdf

Martha and Bob,

Attached is a new map of EBL cases in Flint randomized by a method used by Ed Hartwick. It's better than the previous map I generated where cases were scattered at random throughout the city. In the revised map, cases were shifted slightly from their original point so some of the clustering still holds up. This is probably the final map that GCHD could use for their presentation.

Let me know if you have any questions or if you want to discuss.

Thank you,  
Junaid

**Subject:** Flint map with randomized points

Martha and Bob,

Attached is the map of Flint with points randomized by zip code, meaning I calculated the # of cases with BLL between 5 and 9 ug/dL (inclusive) and with BLL  $\geq 10$  ug/dL for each zip code and plotted the same number of cases per zip code in random locations within the zip code boundary. Unfortunately, as we originally suspected, the clustering of cases depicted in the original map (also attached) is lost with this randomization.

**Subject:** UPDATE: Flint map randomization

Martha and Bob,

Attached is a new map of EBLL cases in Flint randomized by a method used by Ed Hartwick. It's better than the previous map I generated where cases were scattered at random throughout the city. In the revised map, cases were shifted slightly from their original point so some of the clustering still holds up. This is probably the final map that GCHD could use for their presentation.

Let me know if you have any questions or if you want to discuss.

Thank you,  
Junaid

# Elevated Blood Lead Levels in Children Associated With the Flint Drinking Water Crisis: A Spatial Analysis of Risk and Public Health Response

Mona Hanna-Attisha, MD, MPH, Jenny LaChance, MS, Richard Casey Sadler, PhD, and Allison Champney Schnepf, MD

**Objectives.** We analyzed differences in pediatric elevated blood lead level incidence before and after Flint, Michigan, introduced a more corrosive water source into an aging water system without adequate corrosion control.

**Methods.** We reviewed blood lead levels for children younger than 5 years before (2013) and after (2015) water source change in Greater Flint, Michigan. We assessed the percentage of elevated blood lead levels in both time periods, and identified geographical locations through spatial analysis.

**Results.** Incidence of elevated blood lead levels increased from 2.4% to 4.9% ( $P < .05$ ) after water source change, and neighborhoods with the highest water lead levels experienced a 6.6% increase. No significant change was seen outside the city. Geospatial analysis identified disadvantaged neighborhoods as having the greatest elevated blood lead level increases and informed response prioritization during the now-declared public health emergency.

**Conclusions.** The percentage of children with elevated blood lead levels increased after water source change, particularly in socioeconomically disadvantaged neighborhoods. Water is a growing source of childhood lead exposure because of aging infrastructure. (*Am J Public Health*. Published online ahead of print December 21, 2015: e1–e8. doi:10.2105/AJPH.2015.303003)

In April 2014, the postindustrial city of Flint, Michigan, under state-appointed emergency management, changed its water supply from Detroit-supplied Lake Huron water to the Flint River as a temporary measure, awaiting a new pipeline to Lake Huron in 2016. Intended to save money, the change in source water severed a half-century relationship with the Detroit Water and Sewage Department. Shortly after the switch to Flint River water, residents voiced concerns regarding water color, taste, and odor, and various health complaints including skin rashes.<sup>1</sup> Bacteria, including *Escherichia coli*, were detected in the distribution system, resulting in Safe Drinking Water Act violations.<sup>2</sup> Additional disinfection to control bacteria spurred formation of disinfection byproducts including total trihalomethanes, resulting in Safe Drinking Water Act violations for trihalomethane levels.<sup>2</sup>

Water from the Detroit Water and Sewage Department had very low corrosivity for lead as indicated by low chloride, low chloride-to-sulfate mass ratio, and presence of an orthophosphate corrosion inhibitor.<sup>3,4</sup> By contrast, Flint River water had high chloride, high chloride-to-sulfate mass ratio, and no corrosion inhibitor.<sup>5</sup> Switching from Detroit's Lake Huron to Flint River water created a perfect storm for lead leaching into drinking water.<sup>6</sup> The aging Flint water distribution system contains a high

percentage of lead pipes and lead plumbing, with estimates of lead service lines ranging from 10% to 80%.<sup>7</sup> Researchers from Virginia Tech University reported increases in water lead levels (WLLs),<sup>5</sup> but changes in blood lead levels (BLLs) were unknown.

Lead is a potent neurotoxin, and childhood lead poisoning has an impact on many developmental and biological processes, most notably intelligence, behavior, and overall life achievement.<sup>8</sup> With estimated societal costs in the billions,<sup>9–11</sup> lead poisoning has a disproportionate impact on low-income and minority children.<sup>12</sup> When one considers the irreversible, life-altering, costly, and disparate impact of lead exposure, primary prevention is necessary to eliminate exposure.<sup>13</sup>

Historically, the industrial revolution's introduction of lead into a host of products has contributed to a long-running and largely silent pediatric epidemic.<sup>14</sup> With lead now removed from gasoline and paint, the incidence of childhood lead poisoning has decreased.<sup>15</sup> However, lead contamination of drinking water may be increasing because of lead-containing water infrastructures, changes in water sources, and changes in water treatment including disinfectant.<sup>16–18</sup> A soluble metal, lead leaches into drinking water via lead-based plumbing or lead particles that detach from degrading plumbing components. ("Plumbing" is derived from the Latin word for lead,

doi: 10.2105/AJPH.2015.303003

“plumbum.”) Lead was restricted in plumbing material in 1986, but older homes and neighborhoods may still contain lead service lines, lead connections, lead solder, or other lead-based plumbing materials. Lead solubility and particulate release is highly variable and depends on many factors including water softness, temperature, and acidity.<sup>19–21</sup> The US Environmental Protection Agency (EPA) regulates lead in public water supplies under the Safe Drinking Water Act Lead and Copper Rule, which requires action when lead levels reach 15 parts per billion (ppb).

Lead in drinking water is different from lead from other sources, as it disproportionately affects developmentally vulnerable children and pregnant mothers. Children can absorb 40% to 50% of an oral dose of water-soluble lead compared with 3% to 10% for adults.<sup>22</sup> In a dose–response relationship for children aged 1 to 5 years, for every 1-ppb increase in water lead, blood lead increases 35%.<sup>23</sup> The greatest risk of lead in water may be to infants on reconstituted formula. Among infants drinking formula made from tap water at 10 ppb, about 25% would experience a BLL above the Centers for Disease Control and Prevention (CDC) elevated blood lead level (EBLL) of 5 micrograms per deciliter ( $\mu\text{g}/\text{dL}$ ).<sup>24</sup> Tap water may account for more than 85% of total lead exposure among infants consuming reconstituted formula.<sup>25</sup> A known abortifacient, lead has also been implicated in increased fetal deaths and reduced birth weights.<sup>26</sup>

As recommended by the CDC and supported by the American Academy of Pediatrics, blood lead screening is routine for high-risk populations and for children insured by Medicaid at age 1 and 2 years.<sup>27</sup> The CDC-recommended screening ages are based on child development (increased oral–motor behavior), which places a child most at risk for house-based lead exposure (e.g., peeling paint, soil, dust). State and national blood lead–screening programs, however, do not adequately capture the risk of lead in water because infants are at greatest risk.

Armed with reports of elevated WLLs and recognizing the lifelong consequences of lead exposure, our research team sought to analyze blood lead data before (pre) and after (post) the water source switch with

a geographic information system (GIS) to determine lead exposure risk and prioritize responses. This research has immediate public policy, public health, environmental, and socioeconomic implications.

This research includes Flint, Michigan, and surrounding municipalities in Genesee County (Greater Flint). Greater Flint is a postindustrial region of nearly 500 000 people struggling from years of disinvestment by the automobile industry and associated manufacturing activities: the region has lost 77% of its manufacturing employment and 41% of employment overall since 1980.<sup>28</sup> National and local data sources demonstrate dismal indicators for children, especially within Flint city limits.<sup>29–32</sup> Greater Flint ranks toward the bottom of the state in rates of childhood poverty (42% in Flint vs 16.2% in Michigan and 14.8% in the United States), unemployment, violent crime, illicit drug use, domestic violence, preterm births, infant mortality, and overall health outcomes (81st out of 82 Michigan counties).

Greater Flint’s struggles have been amplified by a history of racial discrimination, whereby exclusionary housing practices were common.<sup>33,34</sup> Such attitudes toward integration later precipitated White flight and emboldened home-rule governance,<sup>35,36</sup> causing a massive decline in tax revenue for the city. The declining industrial and residential tax bases strained the city’s ability to provide basic services and reversed the public health fortunes of the city and suburbs.<sup>37</sup> Severely reduced city population densities reduced water demand in the distribution system, exacerbating problems with lead corrosion.

## METHODS

This retrospective study includes all children younger than 5 years who had a BLL processed through the Hurley Medical Center’s laboratory, which runs BLLs for most Genesee County children. The pre time period (before the water source change) was January 1, 2013, to September 15, 2013, and the post time period (after the water source change) was January 1, 2015, to September 15, 2015. The primary study group comprised children living within the city of Flint ( $n = 1473$ ; pre = 736; post = 737) who received water from the city water

system. Children living outside the city where the water source was unchanged served as a comparison group ( $n = 2202$ ; pre = 1210; post = 992).

After institutional review board approval and Health Insurance Portability and Accountability Act waiver, we drew data from the Epic electronic medical record system including BLL, medical record number, date of birth, date of blood draw, full address, sex, and race. For each child, only the highest BLL was maintained in the data set. We coded timing (pre or post) of the BLL on the basis of the date of blood draw. We calculated age at time of blood draw.

We geocoded the data set with a dual-range address locator, and manually confirmed accuracy of geocoded addresses. We conducted a series of spatial joins to assign participant records to Greater Flint municipalities and Flint wards (including those with high WLL), enabling the calculation of the number and percentage of children with EBLLs in each geographic region for both time periods. The reference value for EBLL was 5  $\mu\text{g}/\text{dL}$  or greater. We identified Flint wards with high WLLs with water lead sampling maps.<sup>38</sup> Wards 5, 6, and 7 had the highest WLLs; in each ward, more than 25% of samples had a WLL higher than 15 ppb. We theorized that children living in this combination of wards would have the highest incidence of EBLLs (referred to as “high WLL Flint”; the remainder of Flint was referred to as “lower WLL Flint”).

We derived overall neighborhood-level socioeconomic disadvantage from census block group variables intended to measure material and social deprivation. We calculated these scores from an unweighted  $z$  score sum of rates of lone parenthood, poverty, low educational attainment, and unemployment (adapted from Pampalon et al.<sup>39</sup>; used previously in Flint by Sadler et al.<sup>40</sup>), and assigned these to each child on the basis of home address. Positive values denote higher disadvantage, and negative values denote lower disadvantage. Table 1 highlights the overall socioeconomic disadvantage score comparison by time period and area.

We created spatial references for EBLL risk and a predictive surface for BLL by using GIS, providing the ability to see otherwise invisible spatial–temporal patterns in environmental exposure.<sup>17</sup> Because of the need to

Age, y, mean	1.89	1.83	2.09	2.06	2.06	2.02	2.11	2.07
Overall socioeconomic disadvantage score	-0.83	-0.98	2.94	2.88	2.18	2.39	3.28	3.10

Note. WLL = water lead level. No statistically significant differences were found in any pre–post value within any of the 4 geographical areas.

understand spatial variations and geographically target resources, we also ran ordinary Kriging with a spherical semivariogram model on the entire data set for Greater Flint, allowing interpolation of associated BLL risks with lead in water. Previous methods for evaluating spatial variation in lead levels have ranged from multivariable analyses at the individual level<sup>41</sup> to interpolation methods such as inverse distance weighting<sup>42</sup> and Kriging.<sup>43</sup> Given our assumption that lead risk is spatially correlated in Greater Flint because of the age and condition of pipes, interpolation methods are appropriate for building a preliminary risk surface. Both inverse distance weighting and Kriging derive such surfaces by calculating values at unmeasured locations based on weighting nearby measured values more strongly than distant values.<sup>44</sup> Whereas inverse distance weighting is a deterministic procedure and relies on predetermined mathematical formulae, Kriging has the added sophistication of using geostatistical models that consider spatial autocorrelation, thereby improving accuracy of prediction surfaces (ArcGIS Desktop version 10.3, Environmental Systems Research Institute, Redlands, CA). As well, Kriging can be run with relatively few input points: adequate ranges fall between 30 and 100 total points, although Kriging has been conducted with just 7.<sup>44</sup>

Our city of Flint sample included 736 children in the pre period and 737 children in the post period, which amounts to a

density of approximately 22 points per square mile. Kriging has become an increasingly common method for measuring variations in soil lead, and is given more in-depth treatment elsewhere.<sup>45</sup> To examine change in proportion of children with EBLL from the pre to post time periods, we used  $\chi^2$  analysis with continuity correction for each area (outside Flint, all Flint, high WLL Flint, and lower WLL Flint). In addition, we examined differences in overall socioeconomic disadvantage scores from the pre to post time periods by using the independent *t* test. Finally, we used both  $\chi^2$  analysis with continuity correction and 1-way ANOVA to assess demographic differences by area. We used post hoc least significant difference analysis following statistically significant 1-way ANOVAs.

## RESULTS

We uncovered a statistically significant increase in the proportion of Flint children with EBLL from the pre period to the proportion of Flint children in the post period. In the pre period, 2.4% of children in Flint had an EBLL; in the post period, 4.9% of children had an EBLL ( $P < .05$ ). By comparison, outside of Flint water, the change in EBLL was not statistically significant (0.7% to 1.2%;  $P > .05$ ). In high WLL Flint, EBLL increased from 4.0% to 10.6% ( $P < .05$ ). Figure 1 shows the EBLL percentage change per area.

Results of the GIS analyses show significant clustering of EBLLs within the Flint city limits. According to ordinary Kriging, Figure 2 shows a predicted surface based on observations of actual child BLL geocoded to home address to visualize BLL variation over space (measured in  $\mu\text{g}/\text{dL}$ ). The darkest shades of red represent the highest risk for EBLL based on existing observations. Outside Flint, the entire county falls entirely within the lowest half of the range (in shades of blue); the only locations where predicted BLL is greater than 1.75  $\mu\text{g}/\text{dL}$  is within Flint city limits.

Within Figure 2, each ward is also labeled according to the percentage of water samples that exceeded 15 ppb. The areas with the highest WLLs strongly coincide with the areas with the highest predicted BLLs. In addition, the high percentage of EBLL in wards 5, 6, and 7 also correspond with the high WLLs in wards 5, 6, and 7 (the labels in Figure 2). Table 2 shows ward-specific WLLs, pre period and post period EBLL percentages, and predicted BLL and predicted change in BLL from Kriging.

Areas experiencing the highest predicted BLL in the post period (Figure 2) are generally also areas with greatest change in predicted BLL (measured in  $\mu\text{g}/\text{dL}$ ) when compared with the pre period (Table 2; Figure A, available as a supplement to the online version of this article at <http://www.ajph.org>). Figure A quantifies this rate of change with a green to red scale: large increases are shown in increasingly darker shades of red, whereas large decreases are shown in increasingly darker shades of green. These once again match with city wards that experienced greater rates of EBLL percentage increase (Figure 1, Table 2). In wards 5 and 6 (which experienced a predicted 0.51 and 0.27  $\mu\text{g}/\text{dL}$  increase, respectively), the EBLL percentage more than tripled. In ward 5, the EBLL percentage increased from 4.9% to 15.7% ( $P < .05$ ). The area of intersection between wards 3, 4, and 5 (in the east side of the city) also appeared high in the Kriging analysis of Figure 2, and with a different unit of aggregation this neighborhood would also exhibit a significant increase in EBLL percentage. Ward 7 had high pre period and post period EBLL percentage levels above 5% (with a particularly high rate in the western portion of the ward). Citywide,

Note. WLL = water lead level.

\* $P < .05$ .

**FIGURE 1—Comparison of Elevated Blood Lead Level Percentage, Before (Pre) and After (Post) Water Source Change From Detroit-Supplied Lake Huron Water to the Flint River, Flint, MI, 2013 and 2015**

4 wards (1, 4, 7, and 9) experienced decreases in predicted BLL, 3 wards (2, 5, and 6) experienced large increases, and 2 wards (3 and 8) remained largely the same (Figure A).

Overall, statistically significant differences exist between the areas examined (outside Flint, high WLL Flint, and lower WLL Flint) in all demographic characteristics except sex. The overall percentage of African American children is 24.4% outside Flint, compared with 76.8% in high WLL Flint and 67.0% in lower WLL Flint ( $P < .001$ ). Children outside Flint were younger (mean = 1.86 years [SD = 1.10]) than high WLL Flint (mean = 2.04 years [SD = 1.02]) and lower WLL Flint (mean = 2.09 years [SD = 1.07];  $P < .001$ ). Differences in overall socioeconomic disadvantage scores are likewise significant ( $P < .001$ ). Post hoc least significant difference analysis shows statistically significant differences for overall socioeconomic disadvantage between outside Flint and high WLL Flint ( $P < .001$ ), between outside Flint and lower WLL Flint ( $P < .001$ ), and between high WLL Flint and lower WLL Flint ( $P < .001$ ).

## DISCUSSION

Our findings reveal a striking increase in the percentage of Flint children with EBLL

when we considered identical seasons before and after the water source switch, with no statistically significant increase in EBLL outside Flint. The spatial and statistical analyses highlight the greatest EBLL increase within certain wards of Flint, which correspond to the areas of elevated WLLs.

A review of alternative sources of lead exposure reveals no other potential environmental confounders during the same time period. Demolition projects by the Genesee County Land Bank Authority (Heidi Phaneuf, written communication, October 29, 2015) showed no spatial relationship to the areas of increased EBLL rates. As well, no known new lead-producing factories nor changes in indoor lead remediation programs were implemented during the study period. Although Flint has a significant automobile history, the historical location of potentially lead-using manufacturing (e.g., battery plants, paint and pigment storage, production plants) do not align with current exposures.

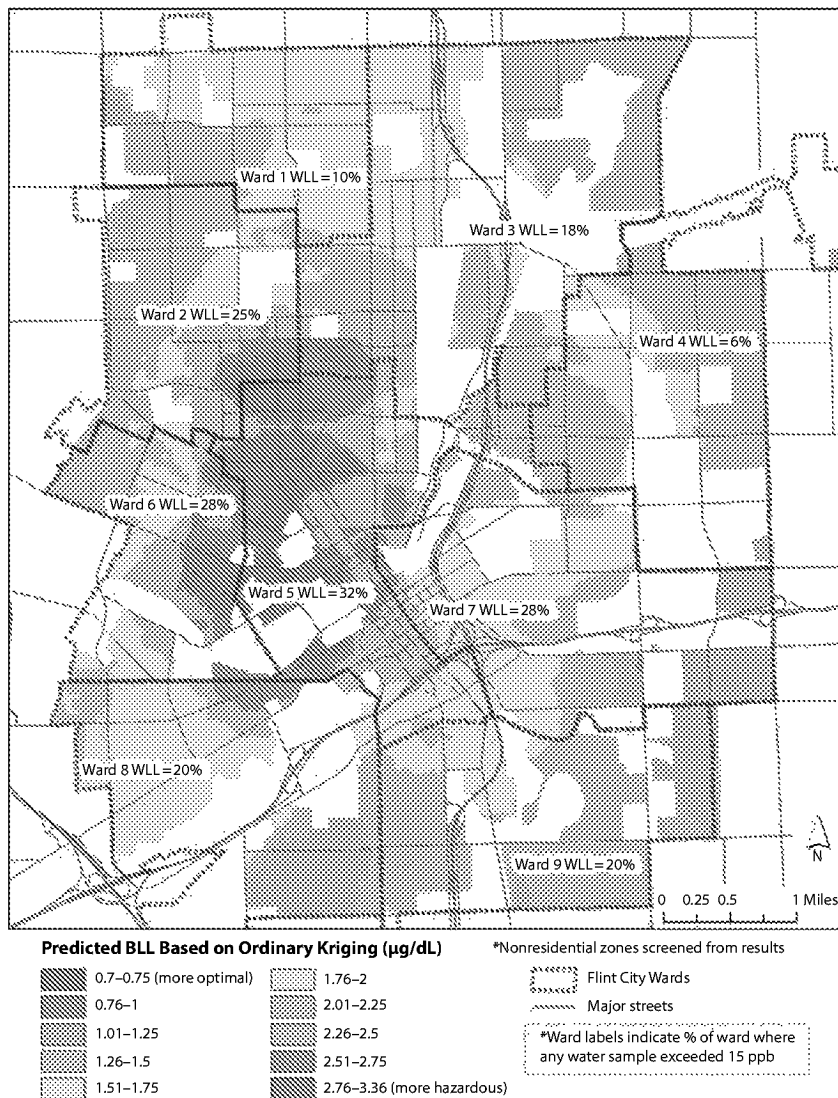

Because there was no known alternative source for increased lead exposure during this time period, the geospatial WLL results, the innate corrosive properties of Flint River water, and, most importantly, the lack of corrosion control, our findings strongly implicate the water source change as the

probable cause for the dramatic increase in EBLL percentage.

As in many urban areas with high levels of socioeconomic disadvantage and minority populations,<sup>46</sup> we found a preexisting disparity in lead poisoning. In our pre water source switch data, the EBLL percentage in Flint was 2.4% compared with 0.7% outside Flint. This disparity widened with a post water source switch Flint EBLL of 4.8%, with no change in socioeconomic or demographic variables (Table 1). Flint children already suffer from risk factors that innately increase their lead exposure: poor nutrition, concentrated poverty, and older housing stock. With limited protective measures, such as low rates of breastfeeding,<sup>47,48</sup> and scarce resources for water alternatives, lead in water further exacerbates preexisting risk factors. Increased lead-poisoning rates have profound implications for the life course potential of an entire cohort of Flint children already rattled with toxic stress contributors (e.g., poverty, violence, unemployment, food insecurity). This is particularly troublesome in light of recent findings of the epigenetic effects of lead exposure on one's grandchildren.<sup>49</sup>

The Kriging analysis showed the highest predicted BLLs within the city along a wide swath north and west of downtown. This area has seen significant demographic change, an increase in poverty, and an increase in vacant properties, especially over the past 25 years (Richard Sadler, written communication, October 5, 2015). Higher BLLs were also predicted northeast of downtown and in other older neighborhoods where poverty and vacancy rates have been high for many decades. Significantly, the biggest changes in predicted BLL since 2013 were also found in these impoverished neighborhoods; more stable neighborhoods in the far north and south of the city may have experienced improved predicted BLLs because of prevention efforts taken by the more-often middle-class residents in response to the water source change. Of considerable interest is that the areas shown as having the best public health indices by Board and Dunsmore in Figure 2 of their 1948 article<sup>37</sup> are virtually identical to the areas with the worst lead levels today.

After our preliminary zip code-based findings (pre to post water source switch

Note. BLL = blood lead level; WLL = water lead level.

**FIGURE 2—Predicted Surface of Child Blood Lead Level and Ward-Specific Elevated Water Lead Level After (Post) Water Source Change From Detroit-Supplied Lake Huron Water to the Flint River, Flint, MI, 2015**

EBLL = 2.1% to 4.0%;  $P < .05$ ) were shared at a press conference,<sup>50</sup> the City of Flint and the Genesee County Health Department released health advisories,<sup>51</sup> and the county health department subsequently declared a public health emergency.<sup>52</sup> Shortly after, the State of Michigan released an action plan with short- and long-term solutions focusing on additional sampling, filter distribution, and corrosion control.<sup>53</sup> One week later, Michigan's governor revealed WLLs in 3 schools to be in the toxic range with 1 school showing a water lead level of

101 ppb, almost 7 times the level that requires remediation.<sup>54</sup> A \$12 million plan to reconnect to Detroit's water source was announced.<sup>54</sup>

We undertook our current spatial analytic approach to overcome limitations of zip code boundaries and to develop a more thorough understanding of specific areas in Flint where EBLL risk is more severe (post office addresses often do not align with municipal boundaries in Michigan, and one third of Flint mailing addresses are not in the city of Flint). This spatial analysis is

valuable for understanding subneighborhood patterns in EBLL risk because aggregation by zip code or ward minimizes the richness of spatial variation and creates artificial barriers that may obscure hot spots (as in the confluence of wards 3, 4, and 5).

Such use of spatial analysis for estimating lead exposure risk has been used to target blood lead-screening programs. In our case, in addition to identifying areas of risk, spatial analysis helps guide municipal and nongovernmental relief efforts aimed at identifying vulnerable populations in specific neighborhoods for priority distribution of resources (e.g., bottled water, filters, pre-mixed formula).

### Limitations

Our research contains a few limitations. First, we may have underestimated water-based lead exposure. Our sample included all children younger than 5 years with blood lead screening, although the greatest risk from lead in water is in utero and during infancy when lead screening is not done. If lead screening were recommended at a younger age (e.g., 6 or 9 months) for children who live in homes with potential lead piping or lead service lines, more children with EBLL from water could be identified, although state and national comparison rates would be lacking. Second, lead screening is not completed for all children. It is mandated by Medicaid and CDC-recommended for other high-risk groups; such data may be skewed toward higher-risk children and thus overestimate EBLL, especially in non-high-risk areas. Third, the underserved population of Flint has significant housing instability: lead levels may reflect previous environmental exposure, and exposure often cannot be adequately estimated on the basis of current residence alone.<sup>55</sup>

Fourth, although large, our sample does not reflect all lead screening from Flint. We estimate that our data capture approximately 60% to 70% of the Michigan Childhood Lead Poisoning Prevention Program data for Flint. Annual data released from this program further support our findings, revealing an annual decrease in EBLL percentage from May to April 2010 to 2011 until the same period in 2013 to 2014 (4.1%,

9	20	3.4	1.6	2.5	-0.43

Note. BLL = blood lead level; EBLL = elevated blood lead level; WLL = water lead level.

<sup>a</sup>Ordinary Kriging geostatistical analysis.

<sup>b</sup>Indicates wards defined as high WLL risk in this study.

3.3%, 2.7%, 2.2%, respectively<sup>56</sup>; Robert L. Scott, e-mail correspondence, September 25, 2015). Following the water switch in April 2014, the 4-year declining trend (as seen nationally) reversed with an annual EBLL of 3.0%.

We found consistent results (with control for age and methodology) when we analyzed Michigan Childhood Lead Poisoning Prevention Program data for both high WLL Flint (EBLL percentage increased: 6.6% to 9.6%) and outside Flint (EBLL percentage remained virtually unchanged: 2.2% to 2.3%). Our institution-processed laboratory blood lead tests, however, had an even greater proportion of children with EBLLs versus state data in the post period. This may reflect that the BLLs processed at Hurley Medical Center, the region's only safety-net public hospital, represent a patient population most at risk with limited resources to afford tap water alternatives.

## Conclusions and Future Research

Future research directions include conducting more detailed geospatial analyses of lead service-line locations with locations of elevated BLLs and WLLs; repeating identical spatial and statistical analyses in the same time period in 2016 reflecting changes associated with the health advisory

and return to Lake Huron source water; analyzing feeding type (breastfed or reconstituted formula) for children with EBLLs; analyzing cord blood lead of Flint newborns compared with non-Flint newborns; and conducting water lead testing from homes of children with EBLLs.

A once celebrated cost-cutting move for an economically distressed city, the water source change has now wrought untold economic, population health, and geopolitical burdens. With unchecked lead exposure for more than 18 months, it is fortunate that the duration was not longer (as was the case in Washington, DC's lead-in-water issue).<sup>16</sup> Even so, the Flint drinking water crisis is a dramatic failure of primary prevention. The legal safeguards and regulating bodies designed to protect vulnerable populations from preventable lead exposure failed.

The Lead and Copper Rule requires water utilities to notify the state of a water source or treatment change recognizing that such changes can unintentionally have an impact on the system's corrosion control.<sup>57</sup> Although a review is required before implementing changes, the scope of risk assessment is not specified and is subject to misinterpretation. In response to the Flint drinking water crisis, the EPA recently released a memo reiterating and clarifying the need for states to conduct corrosion

control reviews before implementing changes.<sup>58</sup> This recommendation is especially relevant for communities with aging infrastructure, usurped city governance, and minimal water utility capacity; in such situations, there is an increased need for state and federal expertise and oversight to support decisions that protect population health.

Through vigilant public health efforts, lead exposure has fallen dramatically over the past 30 years.<sup>13</sup> With the increasing recognition that no identifiable BLL is safe and without deleterious and irreversible health outcomes,<sup>13</sup> *Healthy People 2020* identified the elimination of EBLLs and underlying disparities in lead exposure as a goal.<sup>59</sup> Regrettably, our research reveals that the potentially increasing threat of lead in drinking water may dampen the significant strides in childhood lead-prevention efforts. As our aging water infrastructures continue to decay, and as communities across the nation struggle with finances and water supply sources, the situation in Flint, Michigan, may be a harbinger for future safe drinking-water challenges. Ironically, even when one is surrounded by the Great Lakes, safe drinking water is not a guarantee. 

## CONTRIBUTORS

M. Hanna-Attisha originated the study, developed methods, interpreted analysis, and contributed to the writing of the article. J. LaChance and R. Casey Sadler assisted with the development of the methods, analyzed results, interpreted the findings, and contributed to the writing of the article. A. Champney Schnepf assisted with the interpretation of the findings and contributed to the writing of the article.

## ACKNOWLEDGMENTS

We would like to thank Marc Edwards, PhD, and Elin Betanzo, MS, for their expert assistance with understanding the historical and scientific background of lead in water.

## HUMAN PARTICIPANT PROTECTION

This study was reviewed and approved by Hurley Medical Center institutional review board.

Hello

Here is an updated file. Not much movement over last 2 weeks due to short weeks and holidays. No new file from Bob until this week. I added a column (B) to report week's lists numbers instead of the number being buried in the first column (A). It helped for the formulas. The columns shifted once to right to become C to O. We did open one child to case management during this time period.

Thank you

Kim Noble RN, BSN

**Subject:** RE: MCIR and Lead

Yes, that's right. The percentage of missed matches is very low, so it's considered a good resource for providers---but we want to make it better.

**Subject:** RE: MCIR and Lead

It is pulled from the lead database in the warehouse. My understanding from Bob is that there are some concerns about the match in the warehouse, with a lot of lead reports that don't match with MCIR. But unless Bob has other information, this probably is the best way for the provider to look for now. Bob -- your thoughts?

**Subject:** MCIR and Lead

Sorry to interrupt your call, Martha...I just have a quick question...

One message that GCHD wanted to be included in outreach materials was that parents should request that their medical providers look in MCIR to see if/when their child was tested for lead.

Rachel Potter confirmed that there is that option in MCIR, but she wasn't sure how it was updated in the system -- do doctors have to enter it directly or does it pull from the data warehouse? Are results saved to?

If we incorporate this request into the messaging, I just want to make sure that it will actually provide the answer they're looking for.

Thanks!

**Subject:** RE: 2014 lead data

It is true that those old reports do have unsuppressed data by zip code. Colin has weighed in recently on this with Bob Scott, so Bob has told me, advising that this should change. I support the need to implement a set of suppression rules for CLPP data. Coincidentally, Corinne recently convened a workgroup to discuss the issue of data suppression for all of the BOE surveillance systems. (Note: different surveillance programs use different rules, for various reasons). We will need to discuss this issue with Corinne and, I would assume, Colin, and come up with an appropriate set of rules for CLPP before we release 2014 zipcode level counts.

**Subject:** RE: 2014 lead data

So does what the HHS privacy officer is telling us apply to the reports that have been posted on our website for some time with 2012 and 2013 data? I am not sure those tables that are currently posted have suppressed data.

[http://www.michigan.gov/documents/mdhhs/CLPPP\\_2013\\_Data\\_Report\\_502175\\_7.pdf](http://www.michigan.gov/documents/mdhhs/CLPPP_2013_Data_Report_502175_7.pdf)

**Subject:** RE: 2014 lead data

**Importance:** High

Okay! If the reporter is asking for 2014 zip code data for the state, here is the answer:

- We have those data – de-duplicated by year (as was the report for the Gov’s office), BUT
- Only for cases that were confirmed by a venous blood draw (would not include capillary finger pokes that were included in the counts for the Gov’s office, so the counts would not match), AND
- Many of the zip codes have a very small number of cases, so we would have to suppress the data for those zip codes per Colin Boes, HHS privacy officer.

The history behind the case definition is a longer story, but if we want to provide zip code data that matches the data provided in the “one-pager” that is now 3 pages, it will take time. Not sure how much until Patti McKane is involved.

Linda

**Subject:** Re: 2014 lead data

Thanks Linda, but the media call originated in our office.

the bigger issue here is this is data that is routinely available on the MDHHS web site and before the '14 data is posted and/or provided to a reporter, we want to ensure that the program and Epi agree it is correct. I would not want to be in a situation where epi looks at the past data posted and says "we don't think that is accurate".

I talked with Jennifer Eisner and here is what we need:

Only the 2014 data (not 2015 since we don't typically release a year's data before the year is completed), by zip code for all of Michigan with small cells suppressed. And only confirmed venous tests as CLPPP has done for previous years: we'll explain that we're including capillary tests in the Flint reports in an effort to capture all possible EBL children.

Could I please have an estimate of when this can be done?

**Importance:** High

Ok, I deleted all the chatter in-between.

I believe the request is for annual 2014 and 2015 (not by quarter) for all Michigan zip codes (suppressing cells less than 6). The data provided should match what we're reporting to the Director/Governor, so retain the highest test whether venous or capillary.

Jennifer/Geralyn: is that accurate?

**Subject:** Re: 2014 lead data

We use INTCK function in SAS to calculate the age. I believe it calculates to days and we ask SAS for years.

I used specimen date.

Maybe a slight difference in the way we calculated age at test? I used this: (Specimen Date – Date of Birth)/365.25 and then included all children < 6.00 years of age.

**Subject:** FW: 2014 lead data

Bob and Patti – Can you explain why Bob's total for 2014 (143,123 – see attached) is bigger than Patti's (141,355) . Is this because bob uses report date and Patti used specimen date?

**Subject:** RE: 2014 lead data  
**Importance:** High

I talked with Jennifer Eisner and here is what we need:

Only the 2014 data (not 2015 since we don't typically release a year's data before the year is completed), by zip code for all of Michigan with small cells suppressed. And only confirmed venous tests as CLPPP has done for previous years: we'll explain that we're including capillary tests in the Flint reports in an effort to capture all possible EBL children.

Could I please have an estimate of when this can be done?

**Subject:** RE: 2014 lead data  
**Importance:** High

Ok, I deleted all the chatter in-between.

I believe the request is for annual 2014 and 2015 (not by quarter) for all Michigan zip codes (suppressing cells less than 6). The data provided should match what we're reporting to the Director/Governor, so retain the highest test whether venous or capillary.

Jennifer/Geralyn: is that accurate?

**From:** McKane, Patricia (DHHS)

**Subject:** FW: 2014 lead data

All –

A reporter with Bridge Magazine is requesting the statewide 2014 (and if possible, 2015) CLPPP data. Bob sent me the attached county-level info for 2014 which I have not shared yet, as it's not the final report.

We would like to touch base to make sure the data has been finalized and reviewed by epi before it's posted online.

Eden – we'll reach out to you in the morning to discuss the media request. Beyond the data, the reporter is also interested in discussing home lead investigations.

**STUDY PROPOSAL TEMPLATE** *You may attach additional pages if needed, or recreate form using prescribed headings and subheadings.*

**Study Title:** Analysis of Pediatric Blood Lead Levels

**Study Team Members:** (Names, Degrees, Affiliations, Study Team Roles)

Mona Hanna-Attisha MD MPH, Director Pediatric Residency Program, Hurley Children's Hospital at Hurley Medical Center and Assistant Professor, Department of Pediatrics and Human Development, Michigan State University College of Human Medicine, Principal Investigator

Jenny LaChance MS CCRC, Hurley Medical Center Research Department, Research Analyst and Co-Investigator

Rick Sadler, PhD, Assistant Professor of Family Medicine, Division of Public Health, College of Human Medicine, Michigan State University, Research Analyst and Co-Investigator

Allison Schnepf MD, Pediatric Resident, Hurley Children's Hospital at Hurley Medical Center, Co-Investigator

## I. INTRODUCTION

The INTRODUCTION provides problem identification and justification. It serves to clarify the purpose of your study intentions—and the potential benefit of conducting the work.

### 1. Purpose or Statement of the Problem

(Describe why the problem is important; the scope/severity of the problem.)

In April of 2014, the City of Flint changed their water supply from the Detroit river to the Flint river. Flint had Safe Drinking Water Act violations for trihalomethanes after switching water sources. In response, the City of Flint dramatically increased chlorine disinfection, thus changing the oxidation reduction potential and allowing the metal on the lead pipes to leach into the water without necessary corrosion control. Researchers from Virginia Tech University have reported increases in water lead levels (WLL); however, it is unknown if there have been any changes in blood lead levels (BLL). Lead is a potent neurotoxin that leads to irreversible brain damage in vulnerable populations, especially children. Lead screening is routinely done by pediatricians and by county health departments for children who reside in high-risk populations and for children insured by Medicaid. Hurley Children's Clinic cares for the largest number of high-risk Medicaid children in Genesee county and Hurley Medical Center laboratory runs the majority of blood lead tests in the county.

### 2. Background or Review of the Literature

(Provide a critical appraisal of existing knowledge and how your work may help to fill identified gaps.)

According to the Advisory Committee on Childhood Lead Poisoning Prevention, “no measurable level of blood lead is known to be without deleterious effects, and once engendered, the effects appears to be irreversible.”<sup>i</sup> The consequences of lead poisoning impact many biological processes, most notably intelligence, behavior and overall life achievement<sup>ii</sup>. Increases in blood lead levels from 1 to 4 ug/dL has been associated with a change in mean IQ of approximately -2.3 to -5.2 IQ points.<sup>iii</sup> Considering the irreversible and life-altering impact of lead exposure, primary prevention has been advocated to eliminate exposure.

With the removal of lead from gasoline and paint, the incidence of lead toxicity has decreased over the decades<sup>iv</sup>; however, the role of lead in drinking water has played an increasingly prominent role as other sources of lead exposure have reduced and with increased knowledge of the impact of low level lead toxicity<sup>v</sup>. In 2001, Washington DC changed their treatment chemical which caused lead plumbing corrosion and left thousands of children with lifelong health risks from elevated lead levels.<sup>vi</sup> In April of 2014, the City of Flint changed their water source from the Detroit to the Flint river. The Detroit water system contained anti-corrosion chemicals, but the new Flint water source did not.<sup>vii</sup> Tests of the Flint water by Virginia Tech University Professor Marc Edwards and his team have revealed elevated lead levels in Flint drinking water.<sup>viii</sup>

### 3. Specific Aims

(Specific aims should be few in number and very succinct, not more than one or two sentences per aim. Number your aims so that these can be traced to the Project Design and Data Analysis sections of your Methods.)

- 1) Calculate the mean blood lead level (BLL) of Flint children (who receive Flint water) under the age of five years in different time intervals before and after water switch beginning from January 1, 2013 to current.
- 2) Calculate the percentage of Flint children (who receive Flint water) under the age of five years with elevated blood lead (EBL) in different time intervals before and after water switch beginning from January 1, 2013 to current.

### 4. Significance or Study Rationale

(Describe long-range objectives.)

With no reported changes in blood lead level data, it is unclear if the change in Flint water source has impacted pediatric lead exposure. Information about the change in the mean and the change in the percentage of elevated blood lead levels from a large sample of potentially exposed impacted children has tremendous public policy, public health and socioeconomic implications.

## II. METHODS

The METHODS is a ‘blueprint’ of your study plan. It outlines the steps that you will undertake in order to successfully conduct the study.

### 1. Setting

(Where will the work be conducted? Identify and describe the setting or settings.)

City of Flint; City of Flint will be determined by residence of the following zip codes: 48501 to 48507. Additionally, recipients of Flint water will be identified with GIS or other software assistance. This is the area that primarily was affected by the change in water source. The city of Flint has a population just below 100,000 (99,002 estimated in 2014) and 8% are below age 5. In Flint, 41.5% of residents are below the poverty level (compared to 16.8% in Michigan).

## 2. Subjects

(Describe population/sample; demographic profile/characteristics; subject inclusion and exclusion criteria; anticipated number and the likelihood of recruiting number.)

All children less than five years old, with an emphasis on children less than 15 months old, with blood lead levels who live in the city of Flint. Additionally, children less than 5 years who had lead levels through Hurley Laboratory who do not live in the city will be analyzed as a comparison group.

## 3. Project Design

(Describe how you will conduct the project. Describe study personnel; subject recruitment and informed consent processes; intervention descriptions; resources/materials; equipment. Provide a tentative time line for conducting project work.)

This is a retrospective study of blood lead levels. This project will be conducted through the request of various data sets (as described below). No informed consent will be needed. There will be no intervention as part of the study. The principal investigator will request data from the below sources. Jenny LaChance will be primarily responsible for getting data into a format that can be analyzed with statistical software. Both investigators with Dr. Sadler will review, analyze, and disseminate data. Dr. Schnepf will assist with review of analysis and dissemination of information. Our tentative timeline is that data would be received starting after IRB approval (~September 2015). Once we have data, we will start analysis. Because different data sets may be received at different times, we may be received data for the next 6-12 months while analyzing other data sets. Once we have results, findings may be presented or published for up to 5 years.

### Data sets

Blood lead levels for all Hurley Children's Clinic patients aged less than five years will be obtained from Epic EMR. A report will be requested to include patient's medical record number, full address, date of birth, date of blood draw, zip code, full address, and blood lead level.

Blood lead levels for all patients aged less than five years will be obtained from the Hurley lab electronic system. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, full address, blood lead level, and primary medical doctor.

Blood lead levels for all patients in Flint (and Genesee County if available) aged less than five years will be obtained from MDHHS Childhood Lead Poisoning Prevention Program database (which sends data to the MDHHS Data Warehouse) from the state of Michigan. A report will be requested to include child ID number, date of birth, date of blood draw, address with zip code, blood lead level, and specimen type.

Blood lead levels for all patients aged less than five years will be obtained from the Greater Flint Health Coalition's Children's Healthcare Access Program (CHAP). CHAP sites include Hurley Children's Clinic, Mott Children's Health Center, Hamilton Health Center and Akpinar Pediatrics. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, blood lead level, and primary medical doctor.

Additionally, demographic data will be requested when available. Demographic variables may include gender, race, and insurance type, if available. Finally, ward or risk level of lead (based on water data) may be determined from GIS or address information

Lastly, water service line information (lead/no lead, etc) will be incorporated into data sets as possible. This information will be received by the city of Flint

#### 4. Data Collection

(Describe the data collection/storage plan. Include all data collection tools and process with the proposal. State how you will assure confidentiality.)

Data will be collected and stored on secure/encrypted memory sticks (or desktop of Hurley computers) received from Hurley's Informational Technology department. State of Michigan will provide data in a secure electronic format that will then be stored on encrypted memory sticks or desktop of Hurley computers. Patient medical record numbers/Child ID numbers are only obtained to identify the same patient with multiple lead levels. After identification of duplicates, medical record numbers/Child ID numbers will be removed. Date of birth and date of lead level will be used to calculate age at time of lead lab result and timing in relation to the change in water source. Addresses will be used to determine who lives within the area served by Flint water. GIS or other software may assist with this.

Date of birth will be removed from data files once age has been calculated at time of lead level blood draw. Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others. Addresses must be kept with data file and GIS analysis file as these are the basis for the GIS analysis. Addresses will be destroyed 1 year post dissemination as this allows time for other researchers to question work and for us to produce other information if necessary based on commentary/questions. At that time, only GIS maps that were created will be kept.

#### 5. Sample Size

(For comparative research, this should be a formal sample size calculation, which the Research Center can help calculate. For descriptive or pilot studies, justify based on precision of the estimate, pragmatic issues based on resources, number of patients available, etc. or other factors.)

Sample size of pre-switch first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

Sample size of post-switch (one year post to current) first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

If there is a 5% increase in elevated lead levels from 3% to 8%, then this sample will have adequate power. With an alpha of 0.05 and a power 0.80, 882 pre subjects and 221 post subjects would be needed.

\*If you are conducting descriptive or exploratory work as opposed to an experimental study, you may provide a subject number justification as opposed to a power analysis.

#### **4. Data Analysis**

(Describe statistical techniques to be applied in order to answer your research question or test your hypothesis; plan for interpretation and dissemination; person responsible. For descriptive studies, precision of the primary specific aim should be included.)\*

Descriptive statistics will be used to calculate blood lead level means (or geometric means) and percentage of children with elevated blood lead levels. Comparisons will be made with independent t-test/1 way ANOVAs and chi-squared analysis for groups and subgroups (age, risk level, etc). Additionally, regression modeling may be used to look at the impact of specific area and/or demographics on lead levels, if appropriate. Finally, GIS analysis may assist with identification and analysis of those who receive water and incidence of EBL and levels of lead

Jenny LaChance and Rick Sadler will be primarily responsible for data analysis.

\*You are encouraged to seek statistical consultation through a university or hospital research department.

## MDCH IRB ABBREVIATED INITIAL REVIEW APPLICATION

### SECTION 1 – PROJECT IDENTIFICATION

1.1 **Project Title:** Analysis of Pediatric Blood Lead Levels in Flint, MI

*Note: The project title provided above should appear on each document submitted to the MDCH IRB for this study review.*

1.2 **Responsible MDCH Employee Name:** Robert L. Scott  
**Phone:** 517-335-8178  
**E-mail:** [scottr9@michigan.gov](mailto:scottr9@michigan.gov)  
**ID Mail Address:** WSB 4<sup>th</sup> floor

*Note: The Responsible MDCH Employee must be a Civil Service employee of MDCH and should be the employee most responsible for the Department's role in this project. To serve as the responsible MDCH employee you must have completed CITI human research protections training within the past 3 years.*

1.3 **Responsible MDCH Employee's Signature:**

*Note: If this document is submitted from the e-mail address of the Responsible MDCH Employee, a hard copy with signature is not required.*

1.4 **Responsible MDCH Employee's Administration:** Population Health and Community Services  
**Bureau or Office:** Family, Maternal and Child Health  
**Bureau or Office Director/Supervisor:** Rashmi Travis  
**E-mail for this supervisory contact:** [travisr@michigan.gov](mailto:travisr@michigan.gov)  
**ID Mail Address for this supervisory contact:** CVB, 6<sup>th</sup> floor

*The Bureau Director (or equivalent supervisor) listed above will receive copies of IRB determinations.*

1.5 **Principle Investigator:** Mona Hanna-Attisha MD MPH  
**Organization:** Hurley Medical Center  
**Phone:** 810-262-7257  
**E-mail:** [mhanna1@hurleymc.com](mailto:mhanna1@hurleymc.com)

*Note: Contact information is requested for use if the Responsible MDCH Employee is not available.*

1.6 **Is this project federally funded?** ☐ Yes ☒ No  
**If "Yes", specify the federal agency:**

1.7 **Non-Federal funding source(s) if applicable:**

1.8 **Is this project subject to FDA regulations?** ☐ Yes ☒ No  
**If "Yes", please specify below which FDA-regulated test articles will be used:**  
☐ No test article used  
☐ Drug or biologic used IND#: Trial Phase:  
☐ Device used IND#: Risk Level: Choose One

1.9 **What date do you plan to begin this project?** As soon as IRB approval; est Sept/Oct 2015  
**What date do you plan to complete this project?** Sept 2016 with dissemination to possibly continue

1.10 **Will another organization's IRB review this project?** ☒ Yes ☐ No  
**If "Yes", please list the organization(s) here:** Hurley Medical Center

1.11 **Describe any conflicts of interest that could be perceived to compromise the integrity of the project:**  
 NA

## INSTRUCTIONS FOR SUBMITTING YOUR APPLICATION

*Note: This abbreviated application should only be used when another institution is providing IRB review of this project in addition to MDCH. MDCH will perform a full review of the protocol as submitted to the other institution's IRB and may request modifications. Approval by another institution's IRB does not guarantee approval at MDCH.*

To submit your application:

1. Verify all elements of section I are complete
2. Attach all materials submitted to the other organization's IRB to this abbreviated application.
3. If approval has already been granted by another IRB, attach the notice of approval.
4. Ensure approval by the Responsible MDCH Employee (*note: Responsible MDCH Employee's should perform a programmatic review to ensure MDCH involvement in the project is appropriate, and should serve as the first line in identifying and addressing human research protection issues that may be pertinent to the project*)
5. The Responsible MDCH Employee should indicate approval and submit the complete application by e-mailing all documents from his or her MDCH e-mail account to: [MDCH-IRB@michigan.gov](mailto:MDCH-IRB@michigan.gov), or by signing the application and mailing all materials (ID mail or otherwise) to:

MDCH Institutional Review Board  
Capitol View Building, 7<sup>th</sup> Floor  
201 Townsend Street  
Lansing, Michigan 48913

Completion of the non-abbreviated MDCH IRB Initial Review Application (DCH-1277) is required for IRB Review at MDCH when MDCH is the only organization involved in the project, or when MDCH has primary responsibility for the project. Do not submit this abbreviated application if no other IRB will review this protocol.

**Study Title:** Analysis of Pediatric Blood Lead Levels in Flint, MI

**Responsible Department Employee:** Robert L. Scott

**Primary Investigator:** Mona Hanna-Attisha MD MPH

**Research Staff Requiring Access to Protected Health Information (PHI):**

Mona Hanna-Attisha MD, MPH; Jenny LaChance MS; Richard Sadler PhD; Allison Schnepf MD

**Name(s) of Covered Entity(ies) and Location(s) Where PHI Will Be Reviewed:**

--Hurley Medical Center, One Hurley Plaza, Flint, MI 48503

--Division of Public Health, College of Human Medicine, Michigan State University, 200 East 1st Street Room 337, Flint, MI 48502

**PHI Required and Intended Use:**

Child ID number, date of birth, date of blood draw, address with zip code.

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch (pre/post).

Address with zipcode is needed for GIS (geographic information system) analysis and to determine if child lives in potentially high risk area for lead.

**Does the use or disclosure of the PHI involve more than minimal risk to the privacy of the potential subjects? (please select one answer) ☐ YES ☒ NO**

Data will be kept very secure through the use of encrypted thumb drives (or on hospital secure computers in individual researchers' offices) and only seen by 4 researchers. Data will be with one of the researchers or in a locked office at all times. Identifiers will be removed for files for analysis as not needed and all identifiable data destroyed once not needed.

**Describe your plan to destroy identifiers at the earliest opportunity consistent with conducting the research. (All identifier links must be destroyed for minimal risk research. For other research, unless there is a health or research justification for retaining the identifiers or such retention is otherwise required by law. If retention of identifiers is required, explain the reason and indicate that the identifiers will be stored and retained.)**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results. Once duplicates have been removed, child ID number will be deleted from raw data file.

Date of birth is required so we can determine the age of the child at time of blood lead level. Date of birth will be removed from the raw data file once the age has been calculated.

Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others.

Addresses must be kept with raw data file and GIS analysis file as these are the basis for the GIS analysis. GIS software uses addresses in its calculations. Addresses will be destroyed 1 year post dissemination as this allows time for other researchers to question work (i.e., peer response) and for us to produce other information if necessary based on commentary/questions. After 1 year post dissemination, only GIS maps that were created will be kept.

**Describe your plan to adequately protect the identifiers from improper use and disclosure (Check all that apply and explain other protective measures you will use):**

- X Names and other direct identifiers of individuals will be removed at the earliest possible time if consistent with research design
- X Protected health information (PHI) will be kept in locked storage when not in use
- X Records of research subjects or potential subjects will be kept separate from other patient records
- X Access to records will be restricted to those persons directly involved in the research
- NA Records of individuals not selected to participate in research will be destroyed as soon as possible
- X If researcher discloses PHI to a third party (e.g. a research sponsor, data analyst, centralized database, etc.) researcher has received written assurances that the third party will maintain confidentiality of the PHI

**Describe why the study could not practicably be conducted without access to and use of the protected health information (PHI) requested:**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch.

Address with zipcode is needed for GIS analysis and to determine if child lives in potentially high risk area for lead

All of the above are needed to assess the change in lead levels in children in Flint, MI. Without each of these elements, we wouldn't be able to assess the impact. Without the Child ID number we wouldn't be able to remove duplicates from the data. Without date of birth (and date of blood draw), we wouldn't know the child's age at time of blood draw. Without the date of blood draw, we wouldn't be able to determine if the child's

lead level represents the pre or post time period in relation to the water switch. Finally, without the addresses, we wouldn't be able to use GIS software to examine the trends and patterns of blood lead levels in the city and how they may have changed pre/post the water switch. The addresses are especially important as these can also help guide efforts for change and interventions in specific areas and may allow us to see the relation to lead service lines (once that information is available from City of Flint.)

**Describe why the study could not practicably be conducted without this Waiver of Authorization:**

Without the waiver, we could not identify if the child lived in an area with Flint water, if the child was younger and therefore potentially more vulnerable, if the data is unique lead result for 1 child. Finally, without the waiver we would not be able to determine if the lead value was from before or after the water switch.

This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less of non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)

**Statement of the Primary Investigator:**

*I affirm that:*

- *The requested access, use or disclosure of PHI is necessary for the purposes of the proposed research;*
- *The requested access, use or disclosure of PHI is solely for the purpose for which waiver is being requested;*
- *The waiver of authorization will not adversely affect the welfare or privacy rights of the research subjects;*
- *The benefits of research outweigh the risks to the privacy rights of the research subjects;*
- *The requested information constitutes the minimum necessary data to accomplish the goals of the research; and,*

- *The protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for the authorized oversight of the research study, or for other research for which the use or disclosure of protected health information would be permitted by the HIPAA Privacy Rule.*

FROM: Hurley Medical Center Institutional Review Board

STUDY TITLE: [807433-5] Analysis of Pediatric Blood Lead Levels  
VERSION #: #4, Dated 10/01/2015  
SUBMISSION TYPE: Revision

ACTION: APPROVED  
APPROVAL DATE: October 1, 2015  
EXPIRATION DATE: September 15, 2016  
REVIEW TYPE: Expedited Review

Dear Dr. Hanna-Attisha:

As Chair of the Hurley Medical Institutional Review Board, an **expedited review** was conducted to consider the changes to the following documents for the above-referenced prospective human subjects research project:

- Letter - Letter with changes (UPDATED: 10/1/2015)
- Proposal - revised proposal (UPDATED: 10/1/2015)

Following my review, it was determined that this request for expedited review represents a minor modification, and the amendment to the above documents would not pose any increased risk to research participants.

This preliminary determination will be reviewed at the next full IRB meeting. Your attendance is not required.

A stamped copy of the revised informed consent document is attached for your convenience.

Best wishes in your investigative research endeavors.

Sincerely,

Harland Verrill Ph.D.  
Chair, Institutional Review Board

This letter has been electronically signed in accordance with all applicable regulations, and a copy is retained within Hurley Medical Center's records.

---

**Subject:** RE: For your review (Hurley amendment)  
**Attachments:** HIPAA waiver Hanna-Attisha 100115.pdf

Hello Bob and Martha,

I want to send a note right away as I'm actually not sure this proposed revision is as straight forward as I thought it might be earlier (when I spoke with Martha). This IRB application was approved while thinking of this research as retrospective and involving data that had already been collected. Our IRB approved of the research with a waiver of the requirement for informed consent and a waiver of authorization for the Department to disclose protected health information to Hurley. The justification that permitted approval of those waivers (attached) included the following language:

"This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)"

This language doesn't clearly support a waiver that pertains to prospective data collection. Although the issue of a biased sample may still be compelling, problems with contact information being outdated or wrong are not applicable if the potential to interact with subjects at the time of lead testing is present (that is, if the test hasn't occurred yet).

This isn't to say that a waiver of informed consent or a waiver of authorization to disclose protected health information isn't possible, but a new justification that accounts for the fact that the desired data is now to be collected prospectively is necessary. Our IRB requests that the attached document be updated to reflect this change in the research. It appears that for potentially 75% of subjects, the researcher/her institution will have an opportunity at the time blood is sampled to obtain informed consent and authorization from Hurley patients (or parents) for the use of the test result and other patient information (address specifically) in research. If a consent process is appropriate, one should be proposed. Alternatively, a justification for why that can't occur, and/or why MDHHS must still provide identifiable data to the researcher without authorization from subjects is needed for the research to proceed.

I'm available and very willing to discuss any questions related to this. I certainly understand the interest in making data available to study this important issue. I'm also sensitive that children involved in this research have rights under the Common Rule regulations/HIPAA that prohibit the use of their identifiable information in research without consent of a parent, or without an approved waiver of the requirement for informed consent. Aside from having the researcher

respond with an informed consent proposal or a revised version of the attached document, let me know if you have questions or concerns at this point.

Thank you,  
-Ian

**Study Title:** Analysis of Pediatric Blood Lead Levels in Flint, MI

**Responsible Department Employee:** Robert L. Scott

**Primary Investigator:** Mona Hanna-Attisha MD MPH

**Research Staff Requiring Access to Protected Health Information (PHI):**

Mona Hanna-Attisha MD, MPH; Jenny LaChance MS; Richard Sadler PhD; Allison Schnepf MD

**Name(s) of Covered Entity(ies) and Location(s) Where PHI Will Be Reviewed:**

--Hurley Medical Center, One Hurley Plaza, Flint, MI 48503

--Division of Public Health, College of Human Medicine, Michigan State University, 200 East 1st Street Room 337, Flint, MI 48502

**PHI Required and Intended Use:**

Child ID number, date of birth, date of blood draw, address with zip code.

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch (pre/post).

Address with zipcode is needed for GIS (geographic information system) analysis and to determine if child lives in potentially high risk area for lead.

**Does the use or disclosure of the PHI involve more than minimal risk to the privacy of the potential subjects? (please select one answer) ☐ YES ☒ NO**

Data will be kept very secure through the use of encrypted thumb drives (or on hospital secure computers in individual researchers' offices) and only seen by 4 researchers. Data will be with one of the researchers or in a locked office at all times. Identifiers will be removed for files for analysis as not needed and all identifiable data destroyed once not needed.

**Describe your plan to destroy identifiers at the earliest opportunity consistent with conducting the research. (All identifier links must be destroyed for minimal risk research. For other research, unless there is a health or research justification for retaining the identifiers or such retention is otherwise required by law. If retention of identifiers is required, explain the reason and indicate that the identifiers will be stored and retained.)**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results. Once duplicates have been removed, child ID number will be deleted from raw data file.

Date of birth is required so we can determine the age of the child at time of blood lead level. Date of birth will be removed from the raw data file once the age has been calculated.

Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others.

Addresses must be kept with raw data file and GIS analysis file as these are the basis for the GIS analysis. GIS software uses addresses in its calculations. Addresses will be destroyed 1 year post dissemination as this allows time for other researchers to question work (i.e., peer response) and for us to produce other information if necessary based on commentary/questions. After 1 year post dissemination, only GIS maps that were created will be kept.

**Describe your plan to adequately protect the identifiers from improper use and disclosure (Check all that apply and explain other protective measures you will use):**

- X Names and other direct identifiers of individuals will be removed at the earliest possible time if consistent with research design
- X Protected health information (PHI) will be kept in locked storage when not in use
- X Records of research subjects or potential subjects will be kept separate from other patient records
- X Access to records will be restricted to those persons directly involved in the research
- NA Records of individuals not selected to participate in research will be destroyed as soon as possible
- X If researcher discloses PHI to a third party (e.g. a research sponsor, data analyst, centralized database, etc.) researcher has received written assurances that the third party will maintain confidentiality of the PHI

**Describe why the study could not practicably be conducted without access to and use of the protected health information (PHI) requested:**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch.

Address with zipcode is needed for GIS analysis and to determine if child lives in potentially high risk area for lead

All of the above are needed to assess the change in lead levels in children in Flint, MI. Without each of these elements, we wouldn't be able to assess the impact. Without the Child ID number we wouldn't be able to remove duplicates from the data. Without date of birth (and date of blood draw), we wouldn't know the child's age at time of blood draw. Without the date of blood draw, we wouldn't be able to determine if the child's

lead level represents the pre or post time period in relation to the water switch. Finally, without the addresses, we wouldn't be able to use GIS software to examine the trends and patterns of blood lead levels in the city and how they may have changed pre/post the water switch. The addresses are especially important as these can also help guide efforts for change and interventions in specific areas and may allow us to see the relation to lead service lines (once that information is available from City of Flint.)

**Describe why the study could not practicably be conducted without this Waiver of Authorization:**

Without the waiver, we could not identify if the child lived in an area with Flint water, if the child was younger and therefore potentially more vulnerable, if the data is unique lead result for 1 child. Finally, without the waiver we would not be able to determine if the lead value was from before or after the water switch.

This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less of non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)

**Statement of the Primary Investigator:**

*I affirm that:*

- *The requested access, use or disclosure of PHI is necessary for the purposes of the proposed research;*
- *The requested access, use or disclosure of PHI is solely for the purpose for which waiver is being requested;*
- *The waiver of authorization will not adversely affect the welfare or privacy rights of the research subjects;*
- *The benefits of research outweigh the risks to the privacy rights of the research subjects;*
- *The requested information constitutes the minimum necessary data to accomplish the goals of the research; and,*

- *The protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for the authorized oversight of the research study, or for other research for which the use or disclosure of protected health information would be permitted by the HIPAA Privacy Rule.*

**Attachments:** Study Proposal IRB BLL MHA revised 10 1 15.docx

Hello Martha,

Thank you again for the prompt and thorough response to the IRB comments. Your most recent e-mail was very helpful to my understanding of the proposed revision. What I think has caused confusion to this point, is that the originally approved study protocol (submitted to the MDHHS IRB on 10/1/2015) included only a limited analysis of pediatric blood lead data. In fact, a power analysis had been performed with the initial proposal indicating only a relatively small population sample would be required for the researchers to address the proposed aims. Because no revised protocol is yet available to me, it was my understanding with this revision that the scope of the research proposed had only changed with respect to the time frame to be studied.

It appears, however, given the description provided with your last e-mail, that the researchers now intend to perform a much more detailed characterization of the pediatric population in Flint. The request for a prospective waiver of informed consent that has been submitted reads much more appropriately for a descriptive study. I think what would be most helpful here, and what would likely allow our board to view a waiver request positively, is a revised research protocol that captures the new design of the research to be conducted at Hurley Medical Center.

I've attached the protocol that is currently approved in case that is a helpful reference. Please note that our IRB acknowledges the minimal risk nature of this proposal, we agree that there is the potential for benefit to this research, and we think the data security measures proposed should protect the data requested. At this point, we simply want to verify that the privacy rights of subjects under HIPAA are appropriately respected. If it is not necessary to disclose protected health information for this research without authorization from subjects, then we don't want to violate that right. If it is necessary to disclose protected health information without authorization for this research to occur, then we can approve the waiver and this revision to the research. I look forward to reviewing an updated research protocol. Do not hesitate to contact me with any questions or concerns.

Thank you,  
-Ian

**Subject:** RE: For your review (Hurley amendment)

Hello Martha,

Thanks to you and to Dr. Hanna-Attisha for the very prompt response to my initial inquiry. I appreciate the comments provided. It does not appear (at this point) the threshold for impracticability of obtaining authorization and therefore the threshold for approval of a prospective waiver of authorization has been met. I'm hopeful the following questions will be helpful in thinking through alternative approaches to this research or the details of the waiver request:

1. Is it not possible for MDHHS to receive data from Hurley that allows MDHHS to perform the removal of duplicate test results? If MDHHS (the non-research entity and the entity holding the more inclusive data set) received information from Hurley that allowed for duplicate data to be screened out of prospective data transfers, MDHHS would appear to only need to send address, age, test date and result (that is, less protected health information than proposed) to the researchers. This would minimize the risk of providing additional identifying information (Child ID Number) about non-Hurley patients to the researchers. Understanding that the retrospective data transfer included a large number of records that perhaps prohibited MDHHS from performing this function prior to data transfer, it appears any subsequent data exchanges will be relatively small in comparison. Minimization of risks is important to IRB approval generally. If MDHHS involvement at this level is not possible, please document that.
2. There are two weaknesses with the current justification for the waiver related to the impracticability of conducting the research without the waiver.
  - a. The case is made that obtaining authorization would be difficult, but it is not clear this meets the threshold of impracticability. The researcher does not indicate how many potential subjects will be included in the prospective research. If there are hundreds of subjects being tested each day, it would seem more likely that coordination across Hurley practitioners and/or others would be difficult to the point of impossible. If there are relatively few tests performed per day, then coordination typical of routine clinical research should not be an issue. Also, the opportunity to obtain authorization does not appear limited to the time of the testing. It appears there is additional opportunity to obtain

authorization during follow-up contact with subjects (presumably contact information for subjects won't be as likely to change in the matter of days following a test as it might over the course of years as was discussed in the approved waiver request for the retrospective data).

- b. It is not clear what sample size is needed for the researcher to conduct the proposed analysis. The argument that a sample that excludes the 25% of children not tested at Hurley would bias study results would be better supported with a routine power analysis documenting that greater than 75% response rate is needed. The current justification includes a claim that population-level data is required. Given the relative rarity of elevated blood lead levels among the general population, it appears reasonable that a somewhat large sample will be needed to provide accurate characterizations of differing rates by geography and over a certain time scale, but to state that the analysis couldn't be conducted without population level data is certainly not supported in the documentation provided. A discussion that demonstrates the need for a minimum response rate and additional proof that such a response would not be achieved if authorization from each subject was required would be helpful in documenting why the research cannot be conducted without an approved waiver.

Thank you for considering these points. I look forward to a response addressing these concerns. Regards,  
-Ian

**To:** Scott, Robert L. (DHHS) <[ScottR9@michigan.gov](mailto:ScottR9@michigan.gov)>  
**Cc:** Stanbury, Martha (DHHS) <[stanburym@michigan.gov](mailto:stanburym@michigan.gov)>  
**Subject:** RE: For your review (Hurley amendment)

Hello Bob and Martha,

I want to send a note right away as I'm actually not sure this proposed revision is as straight forward as I thought it might be earlier (when I spoke with Martha). This IRB application was approved while thinking of this research as retrospective and involving data that had already been collected. Our IRB approved of the research with a waiver of the requirement for informed consent and a waiver of authorization for the Department to disclose protected health

information to Hurley. The justification that permitted approval of those waivers (attached) included the following language:

"This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)"

This language doesn't clearly support a waiver that pertains to prospective data collection. Although the issue of a biased sample may still be compelling, problems with contact information being outdated or wrong are not applicable if the potential to interact with subjects at the time of lead testing is present (that is, if the test hasn't occurred yet).

This isn't to say that a waiver of informed consent or a waiver of authorization to disclose protected health information isn't possible, but a new justification that accounts for the fact that the desired data is now to be collected prospectively is necessary. Our IRB requests that the attached document be updated to reflect this change in the research. It appears that for potentially 75% of subjects, the researcher/her institution will have an opportunity at the time blood is sampled to obtain informed consent and authorization from Hurley patients (or parents) for the use of the test result and other patient information (address specifically) in research. If a consent process is appropriate, one should be proposed. Alternatively, a justification for why that can't occur, and/or why MDHHS must still provide identifiable data to the researcher without authorization from subjects is needed for the research to proceed.

I'm available and very willing to discuss any questions related to this. I certainly understand the interest in making data available to study this important issue. I'm also sensitive that children involved in this research have rights under the Common Rule regulations/HIPAA that prohibit the use of their identifiable information in research without consent of a parent, or without an approved waiver of the requirement for informed consent. Aside from having the researcher respond with an informed consent proposal or a revised version of the attached document, let me know if you have questions or concerns at this point.

Thank you,  
-Ian

**Study Team Members:** (Names, Degrees, Affiliations, Study Team Roles)

Mona Hanna-Attisha MD MPH, Director Pediatric Residency Program, Hurley Children's Hospital at Hurley Medical Center and Assistant Professor, Department of Pediatrics and Human Development, Michigan State University College of Human Medicine, Principal Investigator

Jenny LaChance MS CCRC, Hurley Medical Center Research Department, Research Analyst and Co-Investigator

Rick Sadler, PhD, Assistant Professor of Family Medicine, Division of Public Health, College of Human Medicine, Michigan State University, Research Analyst and Co-Investigator

Allison Schnepf MD, Pediatric Resident, Hurley Children's Hospital at Hurley Medical Center, Co-Investigator

## I. INTRODUCTION

The INTRODUCTION provides problem identification and justification. It serves to clarify the purpose of your study intentions—and the potential benefit of conducting the work.

### 1. Purpose or Statement of the Problem

(Describe why the problem is important; the scope/severity of the problem.)

In April of 2014, the City of Flint changed their water supply from the Detroit river to the Flint river. Flint had Safe Drinking Water Act violations for trihalomethanes after switching water sources. In response, the City of Flint dramatically increased chlorine disinfection, thus changing the oxidation reduction potential and allowing the metal on the lead pipes to leach into the water without necessary corrosion control. Researchers from Virginia Tech University have reported increases in water lead levels (WLL); however, it is unknown if there have been any changes in blood lead levels (BLL). Lead is a potent neurotoxin that leads to irreversible brain damage in vulnerable populations, especially children. Lead screening is routinely done by pediatricians and by county health departments for children who reside in high-risk populations and for children insured by Medicaid. Hurley Children's Clinic cares for the largest number of high-risk Medicaid children in Genesee county and Hurley Medical Center laboratory runs the majority of blood lead tests in the county.

### 2. Background or Review of the Literature

(Provide a critical appraisal of existing knowledge and how your work may help to fill identified gaps.)

According to the Advisory Committee on Childhood Lead Poisoning Prevention, “no measurable level of blood lead is known to be without deleterious effects, and once engendered, the effects appears to be irreversible.”<sup>i</sup> The consequences of lead poisoning impact many biological processes, most notably intelligence, behavior and overall life achievement<sup>ii</sup>. Increases in blood lead levels from 1 to 4 ug/dL has been associated with a change in mean IQ of approximately -2.3 to -5.2 IQ points.<sup>iii</sup> Considering the irreversible and life-altering impact of lead exposure, primary prevention has been advocated to eliminate exposure.

With the removal of lead from gasoline and paint, the incidence of lead toxicity has decreased over the decades<sup>iv</sup>; however, the role of lead in drinking water has played an increasingly prominent role as other sources of lead exposure have reduced and with increased knowledge of the impact of low level lead toxicity<sup>v</sup>. In 2001, Washington DC changed their treatment chemical which caused lead plumbing corrosion and left thousands of children with lifelong health risks from elevated lead levels.<sup>vi</sup> In April of 2014, the City of Flint changed their water source from the Detroit to the Flint river. The Detroit water system contained anti-corrosion chemicals, but the new Flint water source did not.<sup>vii</sup> Tests of the Flint water by Virginia Tech University Professor Marc Edwards and his team have revealed elevated lead levels in Flint drinking water.<sup>viii</sup>

### 3. Specific Aims

(Specific aims should be few in number and very succinct, not more than one or two sentences per aim. Number your aims so that these can be traced to the Project Design and Data Analysis sections of your Methods.)

- 1) Calculate the mean blood lead level (BLL) of Flint children (who receive Flint water) under the age of five years in different time intervals before and after water switch beginning from January 1, 2013 to current.
- 2) Calculate the percentage of Flint children (who receive Flint water) under the age of five years with elevated blood lead (EBL) in different time intervals before and after water switch beginning from January 1, 2013 to current.

### 4. Significance or Study Rationale

(Describe long-range objectives.)

With no reported changes in blood lead level data, it is unclear if the change in Flint water source has impacted pediatric lead exposure. Information about the change in the mean and the change in the percentage of elevated blood lead levels from a large sample of potentially exposed impacted children has tremendous public policy, public health and socioeconomic implications.

## II. METHODS

The METHODS is a ‘blueprint’ of your study plan. It outlines the steps that you will undertake in order to successfully conduct the study.

### 1. Setting

(Where will the work be conducted? Identify and describe the setting or settings.)

City of Flint; City of Flint will be determined by residence of the following zip codes: 48501 to 48507. Additionally, recipients of Flint water will be identified with GIS or other software assistance. This is the area that primarily was affected by the change in water source. The city of Flint has a population just below 100,000 (99,002 estimated in 2014) and 8% are below age 5. In Flint, 41.5% of residents are below the poverty level (compared to 16.8% in Michigan).

## 2. Subjects

(Describe population/sample; demographic profile/characteristics; subject inclusion and exclusion criteria; anticipated number and the likelihood of recruiting number.)

All children less than five years old, with an emphasis on children less than 15 months old, with blood lead levels who live in the city of Flint. Additionally, children less than 5 years who had lead levels through Hurley Laboratory who do not live in the city will be analyzed as a comparison group.

## 3. Project Design

(Describe how you will conduct the project. Describe study personnel; subject recruitment and informed consent processes; intervention descriptions; resources/materials; equipment. Provide a tentative time line for conducting project work.)

This is a retrospective study of blood lead levels. This project will be conducted through the request of various data sets (as described below). No informed consent will be needed. There will be no intervention as part of the study. The principal investigator will request data from the below sources. Jenny LaChance will be primarily responsible for getting data into a format that can be analyzed with statistical software. Both investigators with Dr. Sadler will review, analyze, and disseminate data. Dr. Schnepf will assist with review of analysis and dissemination of information. Our tentative timeline is that data would be received starting after IRB approval (~September 2015). Once we have data, we will start analysis. Because different data sets may be received at different times, we may be received data for the next 6-12 months while analyzing other data sets. Once we have results, findings may be presented or published for up to 5 years.

### Data sets

Blood lead levels for all Hurley Children's Clinic patients aged less than five years will be obtained from Epic EMR. A report will be requested to include patient's medical record number, full address, date of birth, date of blood draw, zip code, full address, and blood lead level.

Blood lead levels for all patients aged less than five years will be obtained from the Hurley lab electronic system. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, full address, blood lead level, and primary medical doctor.

Blood lead levels for all patients in Flint (and Genesee County if available) aged less than five years will be obtained from MDHHS Childhood Lead Poisoning Prevention Program database (which sends data to the MDHHS Data Warehouse) from the state of Michigan. A report will be requested to include child ID number, date of birth, date of blood draw, address with zip code, blood lead level, and specimen type.

Blood lead levels for all patients aged less than five years will be obtained from the Greater Flint Health Coalition's Children's Healthcare Access Program (CHAP). CHAP sites include Hurley Children's Clinic, Mott Children's Health Center, Hamilton Health Center and Akpinar Pediatrics. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, blood lead level, and primary medical doctor.

Additionally, demographic data will be requested when available. Demographic variables may include gender, race, and insurance type, if available. Finally, ward or risk level of lead (based on water data) may be determined from GIS or address information

Lastly, water service line information (lead/no lead, etc) will be incorporated into data sets as possible. This information will be received by the city of Flint

#### 4. Data Collection

(Describe the data collection/storage plan. Include all data collection tools and process with the proposal. State how you will assure confidentiality.)

Data will be collected and stored on secure/encrypted memory sticks (or desktop of Hurley computers) received from Hurley's Informational Technology department. State of Michigan will provide data in a secure electronic format that will then be stored on encrypted memory sticks or desktop of Hurley computers. Patient medical record numbers/Child ID numbers are only obtained to identify the same patient with multiple lead levels. After identification of duplicates, medical record numbers/Child ID numbers will be removed. Date of birth and date of lead level will be used to calculate age at time of lead lab result and timing in relation to the change in water source. Addresses will be used to determine who lives within the area served by Flint water. GIS or other software may assist with this.

Date of birth will be removed from data files once age has been calculated at time of lead level blood draw. Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others. Addresses must be kept with data file and GIS analysis file as these are the basis for the GIS analysis. Addresses will be destroyed 1 year post dissemination as this allows time for other researchers to question work and for us to produce other information if necessary based on commentary/questions. At that time, only GIS maps that were created will be kept.

#### 5. Sample Size

(For comparative research, this should be a formal sample size calculation, which the Research Center can help calculate. For descriptive or pilot studies, justify based on precision of the estimate, pragmatic issues based on resources, number of patients available, etc. or other factors.)

Sample size of pre-switch first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

Sample size of post-switch (one year post to current) first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

If there is a 5% increase in elevated lead levels from 3% to 8%, then this sample will have adequate power. With an alpha of 0.05 and a power 0.80, 882 pre subjects and 221 post subjects would be needed.

\*If you are conducting descriptive or exploratory work as opposed to an experimental study, you may provide a subject number justification as opposed to a power analysis.

#### **4. Data Analysis**

(Describe statistical techniques to be applied in order to answer your research question or test your hypothesis; plan for interpretation and dissemination; person responsible. For descriptive studies, precision of the primary specific aim should be included.)\*

Descriptive statistics will be used to calculate blood lead level means (or geometric means) and percentage of children with elevated blood lead levels. Comparisons will be made with independent t-test/1 way ANOVAs and chi-squared analysis for groups and subgroups (age, risk level, etc). Additionally, regression modeling may be used to look at the impact of specific area and/or demographics on lead levels, if appropriate. Finally, GIS analysis may assist with identification and analysis of those who receive water and incidence of EBL and levels of lead.

Jenny LaChance and Rick Sadler will be primarily responsible for data analysis.

\*You are encouraged to seek statistical consultation through a university or hospital research department.

### **III. REFERENCES or BIBLIOGRAPHY**

See below

### **IV. APPENDICES**

There is no data tool for this study as all data will be received electronically (from different sources.) Please see included an excel spreadsheet that shows the variables that may be requested.

**Subject:** FW: # of kids =>6 w elevated BLL

This email trail is the result of my attending a meeting with Nancy, Rashmi and Brenda to discuss their new Medicaid plan, and at the end of that meeting we discussed the problem that was being raised with GCHD wanting to include some kids for follow-up that were outside the criteria given to them in the contract. Rashmi et al asked for what the numbers would look like for kids outside of Flint and older than 5 that had elevated BL. I provided (using Patti's spreadsheet) and this is Rashmi's conclusions.

**Cc:** Moran, Susan (DHHS) <[MoranS@michigan.gov](mailto:MoranS@michigan.gov)>  
**Subject:** RE: # of kids =>6 w elevated BLL

Thanks, Martha. So, given that this amounts to about 15 kids at the most over the course of 2 years, we would recommend to GCHD the following:

- We (Bob Scott) will provide kids 6-18 yrs in the defined zip code and add those to the list already provided to the GCHD
- For those kids requiring case management, GCHD will provide case management, bill Medicaid (for those kids who are on Medicaid), and then use the money we sent via the contract for any differences in costs that are not covered.
- I just confirmed with Sue that this would be our recommendation

Next steps:

- We will discuss with GCHD on our next call
- Martha and Nancy will connect with Bob on adding those kids (6-18 yrs) on the list
- Nancy will connect with Karen about educating the nurses at GCHD about this "change"

If anyone has any questions on the recommendations above, please let me or Nancy know.

Thanks,

Rashmi

**Subject:** # of kids =>6 w elevated BLL

As per our discussion just now, in 2014, 913 kids age 6 -17 were tested in Genesee and 6 had a BLL =>5. (This includes Flint and is whole year, not april-Dec)

For Flint alone in 2014, 428 were tested and 5 had BLL =>5 in 2014. (i.e. 5 of the 6 elevated lived in flint)

For 2015 through November, 1,197 were tested in Genesee and 10 were elevated.

For flint alone in 2015, 765 were tested and 8 were elevated.

I hope this helps.

**Subject:** RE: Tom Talbot's Geographic Masking Tool

Thanks Tom. What you're saying makes a lot of sense. From the map, it seems like GCHD wants to highlight the number of cases with BLL between 5 and 9 ug/dL (inclusive) and those with BLL 10 ug/dL or greater. This would be difficult to portray in a single choropleth map. I'm not entirely sure what message GCHD wants to get across with the map but two choropleth maps would be a simpler solution to randomizing the points across the city of Flint.

**Subject:** RE: Tom Talbot's Geographic Masking Tool

This portion of what's written under "Geographic Aggregation Tool" - join neighboring geographic areas together until a user defined population and/or number of cases is reached – is what I was getting at during our meeting this morning. That is, you expand a geographic area until a certain minimal number of cases are contained, then indicate the number of cases within that section (or have a variety of ranges of cases and create a choropleth map).

**Subject:** Tom Talbot's Geographic Masking Tool

<http://www.albany.edu/faculty/ttalbot/>

Hi Junaid,

I can't locate my copy of Tom's tools that he handed out at CSTE a few years back, but they are described at his web page under "Geographic Aggregation and Masking Tools" . I was thinking the GAT would be useful for the lead data, and it looks like there is both R and SAS code.

Hope this is helpful.

Lorri

PS if you can't download them from his website I bet they are in the Tracking website.

**Subject:** RE: For your review (Hurley amendment)

Hello Bob and Martha,

I want to send a note right away as I'm actually not sure this proposed revision is as straight forward as I thought it might be earlier (when I spoke with Martha). This IRB application was approved while thinking of this research as retrospective and involving data that had already been collected. Our IRB approved of the research with a waiver of the requirement for informed consent and a waiver of authorization for the Department to disclose protected health information to Hurley. The justification that permitted approval of those waivers (attached) included the following language:

"This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)"

This language doesn't clearly support a waiver that pertains to prospective data collection. Although the issue of a biased sample may still be compelling, problems with contact information being outdated or wrong are not applicable if the potential to interact with subjects at the time of lead testing is present (that is, if the test hasn't occurred yet).

This isn't to say that a waiver of informed consent or a waiver of authorization to disclose protected health information isn't possible, but a new justification that accounts for the fact that the desired data is now to be collected prospectively is necessary. Our IRB requests that the attached document be updated to reflect this change in the research. It appears that for potentially 75% of subjects, the researcher/her institution will have an opportunity at the time blood is sampled to obtain informed consent and authorization from Hurley patients (or parents) for the use of the test result and other patient information (address specifically) in research. If a consent process is appropriate, one should be

proposed. Alternatively, a justification for why that can't occur, and/or why MDHHS must still provide identifiable data to the researcher without authorization from subjects is needed for the research to proceed.

I'm available and very willing to discuss any questions related to this. I certainly understand the interest in making data available to study this important issue. I'm also sensitive that children involved in this research have rights under the Common Rule regulations/HIPAA that prohibit the use of their identifiable information in research without consent of a parent, or without an approved waiver of the requirement for informed consent. Aside from having the researcher respond with an informed consent proposal or a revised version of the attached document, let me know if you have questions or concerns at this point.

Thank you,  
-Ian

fax (517) 335-8509

**Study Title:** Analysis of Pediatric Blood Lead Levels in Flint, MI

**Responsible Department Employee:** Robert L. Scott

**Primary Investigator:** Mona Hanna-Attisha MD MPH

**Research Staff Requiring Access to Protected Health Information (PHI):**

Mona Hanna-Attisha MD, MPH; Jenny LaChance MS; Richard Sadler PhD; Allison Schnepf MD

**Name(s) of Covered Entity(ies) and Location(s) Where PHI Will Be Reviewed:**

--Hurley Medical Center, One Hurley Plaza, Flint, MI 48503

--Division of Public Health, College of Human Medicine, Michigan State University, 200 East 1st Street Room 337, Flint, MI 48502

**PHI Required and Intended Use:**

Child ID number, date of birth, date of blood draw, address with zip code.

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch (pre/post).

Address with zipcode is needed for GIS (geographic information system) analysis and to determine if child lives in potentially high risk area for lead.

**Does the use or disclosure of the PHI involve more than minimal risk to the privacy of the potential subjects? (please select one answer) ☐ YES ☒ NO**

Data will be kept very secure through the use of encrypted thumb drives (or on hospital secure computers in individual researchers' offices) and only seen by 4 researchers. Data will be with one of the researchers or in a locked office at all times. Identifiers will be removed for files for analysis as not needed and all identifiable data destroyed once not needed.

**Describe your plan to destroy identifiers at the earliest opportunity consistent with conducting the research. (All identifier links must be destroyed for minimal risk research. For other research, unless there is a health or research justification for retaining the identifiers or such retention is otherwise required by law. If retention of identifiers is required, explain the reason and indicate that the identifiers will be stored and retained.)**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results. Once duplicates have been removed, child ID number will be deleted from raw data file.

Date of birth is required so we can determine the age of the child at time of blood lead level. Date of birth will be removed from the raw data file once the age has been calculated.

Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others.

Addresses must be kept with raw data file and GIS analysis file as these are the basis for the GIS analysis. GIS software uses addresses in its calculations. Addresses will be destroyed 1 year post dissemination as this allows time for other researchers to question work (i.e., peer response) and for us to produce other information if necessary based on commentary/questions. After 1 year post dissemination, only GIS maps that were created will be kept.

**Describe your plan to adequately protect the identifiers from improper use and disclosure (Check all that apply and explain other protective measures you will use):**

- X Names and other direct identifiers of individuals will be removed at the earliest possible time if consistent with research design
- X Protected health information (PHI) will be kept in locked storage when not in use
- X Records of research subjects or potential subjects will be kept separate from other patient records
- X Access to records will be restricted to those persons directly involved in the research
- NA Records of individuals not selected to participate in research will be destroyed as soon as possible
- X If researcher discloses PHI to a third party (e.g. a research sponsor, data analyst, centralized database, etc.) researcher has received written assurances that the third party will maintain confidentiality of the PHI

**Describe why the study could not practicably be conducted without access to and use of the protected health information (PHI) requested:**

Child ID number is required so that we can remove duplicate entries when one child has multiple lead level results.

Date of birth and date of draw are needed to calculate age at time of blood draw.

Date of blood draw is also needed to determine time period in relation to water switch.

Address with zipcode is needed for GIS analysis and to determine if child lives in potentially high risk area for lead

All of the above are needed to assess the change in lead levels in children in Flint, MI. Without each of these elements, we wouldn't be able to assess the impact. Without the Child ID number we wouldn't be able to remove duplicates from the data. Without date of birth (and date of blood draw), we wouldn't know the child's age at time of blood draw. Without the date of blood draw, we wouldn't be able to determine if the child's

lead level represents the pre or post time period in relation to the water switch. Finally, without the addresses, we wouldn't be able to use GIS software to examine the trends and patterns of blood lead levels in the city and how they may have changed pre/post the water switch. The addresses are especially important as these can also help guide efforts for change and interventions in specific areas and may allow us to see the relation to lead service lines (once that information is available from City of Flint.)

**Describe why the study could not practicably be conducted without this Waiver of Authorization:**

Without the waiver, we could not identify if the child lived in an area with Flint water, if the child was younger and therefore potentially more vulnerable, if the data is unique lead result for 1 child. Finally, without the waiver we would not be able to determine if the lead value was from before or after the water switch.

This study could not be practically conducted without Waiver of Authorization. The number of subjects would be greatly reduced if authorization was not waived for several reasons:

- 1) At best, possibly 75% of Flint children (and even less of non-Flint children) have their labs processed at Hurley.
- 2) Of the patients whose labs were processed at Hurley, the contact information on file is often outdated or wrong.
- 3) Finally, a considerable percentage of subjects may not return calls/contacts even if the information on file was correct for them.

It is critical for this issue that we have the most data to get an accurate assessment of the impact of the water change on children's lead levels. This will help to determine risk and prioritize response. A biased sample may make any issues seem worse or better than the actual situation.

(A greatly reduced sample size would also lead to power issues with the analysis as the sample size with authorization would likely not be adequate for the analysis considering the percentage of children with elevated blood levels.)

**Statement of the Primary Investigator:**

*I affirm that:*

- *The requested access, use or disclosure of PHI is necessary for the purposes of the proposed research;*
- *The requested access, use or disclosure of PHI is solely for the purpose for which waiver is being requested;*
- *The waiver of authorization will not adversely affect the welfare or privacy rights of the research subjects;*
- *The benefits of research outweigh the risks to the privacy rights of the research subjects;*
- *The requested information constitutes the minimum necessary data to accomplish the goals of the research; and,*

- *The protected health information will not be re-used or disclosed to any other person or entity, except as required by law, for the authorized oversight of the research study, or for other research for which the use or disclosure of protected health information would be permitted by the HIPAA Privacy Rule.*

Admin Quarterly PMR October 2015

PMR Specifications FY 2016 FIN

Hello,

It was great to speak to you all this afternoon regarding Blood Lead Testing. As discussed, I have attached 2 documents.

The first document is the Blood Lead Testing results page from the October Performance Monitoring Report (PMR). You will notice that while the standard is set at 81%, all plans received a pass even if their scores fell below that standard. We discovered last quarter that the measure was inadvertently excluding children in the Children's Special Health Care Services program. That was correct and the plans' score reflect that change. Because it was an administrative error, we gave the plans a pass for the quarter.

The second document is the PMR specification for the Blood Lead measure. It includes details about age and enrollment criteria.

Please let me know if you have any questions about these documents, but while we are the keepers of the reports, Daisy is the genius behind the queries. You may wish to forward your questions to all of us and we can determine who has the expertise to answer them.

Lastly, I was wondering if any of you could forward the letter/inquiry from the Governor's Task Force on this issue. It would be helpful to me to see what the actual 'ask' was so I can most effectively contribute.

Thanks.

Monica

## Performance Monitoring Report

### Blood Lead Testing for Two Year Olds

**Measure**

Percentage of two year old children that have had at least one blood lead test on or before their second birthday.

**Standard**

81% for continuously enrolled children

**Measurement Period**

July 2015 – September 2015

**Data Source**

MDHHS Data Warehouse

**Measurement Frequency**

Monthly

**Summary<sup>2</sup>**

The plan-wide weighted average was 77%, four percentage points below the standard for the measure. All MHPs met or exceeded the standard in July, August, and September.

**Table 4: Blood Lead Testing for Two Year Olds**

MHP	Standard	Cont. Enrolled Result			Standard Achieved		
		Jul	Aug	Sep	Jul	Aug	Sep
AET	81%	76%	75%	75%	*Yes	*Yes	*Yes
BCC	81%	67%	67%	66%	*Yes	*Yes	*Yes
HAR	81%	68%	68%	63%	*Yes	*Yes	*Yes

UNI	81%	75%	75%	75%	*Yes	*Yes	*Yes
UPP	81%	87%	87%	87%	*Yes	*Yes	*Yes

<sup>2</sup> \*All plans will receive a pass this quarter for the Blood Lead Testing for Two Year Olds measure due to the addition of the CSHCS population.

### ***Blood Lead Testing for 2 Year Olds***

<b>MEASURE</b>	
The percentage of continuously enrolled two (2) year old children have had at least one (1) blood lead test on/or before their second birthday.	
<b>MINIMUM STANDARD</b>	
The minimum standard is at least <b>81%</b> .	
<b>ELIGIBLE POPULATION</b>	
Age	Two years old as of the first day of the measurement month.
Continuous Enrollment	Enrolled in same plan for the measurement month and 12 months preceding 2 <sup>nd</sup> birthday.
Allowable Gap	No more than a one (1) month gap in enrollment.
Anchor Date	Enrolled in the health plan as of the last day of the measurement month.
<b>ADMINISTRATIVE SPECIFICATIONS</b>	
Denominator	The eligible population.
Numerator	Children with at least one blood lead test on/or before their second birthday.
<b>DATA ELEMENTS</b>	
Data extracted utilizing the Unique Client Identifier (UCI) link between the Lead Statewide Database and Medicaid Beneficiary Database.	

<b>Month of Performance Report</b>	<b>Month of Extract</b>	<b>Measurement Month</b>	<b>2 Year Old Birth Dates</b>
Jan 2016	Nov 2015	Oct 2015	10/01/12 – 9/30/13
Jan 2016	Dec 2015	Nov 2015	11/01/12 – 10/31/13
Jan 2016	Jan 2016	Dec 2015	12/01/12 – 11/30/13
Apr 2016	Feb 2016	Jan 2016	1/01/13 – 12/31/13
Apr 2016	Mar 2016	Feb 2016	2/01/13 – 1/31/14
Apr 2016	Apr 2016	Mar 2016	3/01/13 – 2/28/14
Jul 2016	May 2016	Apr 2016	4/01/13 – 3/31/14
Jul 2016	Jun 2016	May 2016	5/01/13 – 4/30/14
Jul 2016	Jul 2016	Jun 2016	6/01/13 – 5/31/14
Oct 2016	Aug 2016	Jul 2016	7/01/13 – 6/30/14
Oct 2016	Sep 2016	Aug 2016	8/01/13 – 7/31/14
Oct 2016	Oct 2016	Sep 2016	9/01/13 – 8/31/14

MDHHS established a schedule to increase the standard for the *Blood Lead Testing for 2 Year Olds* measure. The goal of the schedule was to provide HMOs the necessary time and opportunity to adjust their outreach efforts as a means to prepare for future changes in the standard.

The following table details the schedule for the two year old standard with continuous enrollment.

Timeframe	Percent of Children Tested $\leq 2^{\text{nd}}$ Birthday
October 2011	80%
October 2012	80%
October 2013	80%
October 2014	81%
October 2015	81%

#### PROCESS

The plan-specific percentages are represented in the Medicaid Managed Care Performance Monitoring Reports, which are electronically transmitted to each plan.

**Note:**

- According to the Michigan Administrative Rules, the results of blood lead analyses are to be reported to MDHHS within five (5) business days of test completion.
- Ninety percent of all test results are loaded into the MDHHS data warehouse within one month from the time each specimen is drawn.

#### MEASUREMENT FREQUENCY

Monthly

### **Blood Lead Data Extract for 10 Months to 3 Year Olds**

<b>MEASURE</b>	
The Extract is an electronic data file of enrolled children, aged ten (10) months to three (3) years, distributed to each health plan. All specimen dates and blood lead test results are provided, plus those beneficiaries without a blood lead test. Plans should utilize this file to determine those children who have and have not been tested, and to assist in targeting outreach efforts.	
<b>ELIGIBLE POPULATION</b>	
Age	Ten (10) months to three (3) years old as of the first day of the measurement month.
Continuous Enrollment	N/A
Allowable Gap	N/A
Anchor Date	Enrolled in the health plan as of the last day of the measurement month.
<b>ADMINISTRATIVE SPECIFICATIONS</b>	
Denominator	N/A
Numerator	N/A
<b>DATA ELEMENTS</b>	
Data extract utilizing the Unique Client Identifier (UCI) link between the Lead Statewide Database and CHAMPS. The UCI is unable to form a link between these two sources if name, gender, or date of birth is incorrect or missing. There is one record for each specimen date and one record for each child who has not been tested.	

<b>Month of Extract</b>	<b>Measurement Month</b>	<b>10 Months to 3 Year Old Birth Dates</b>
October 2015	October 2015	10/01/11 – 12/31/14
November 2015	November 2015	11/01/11 – 01/31/15
December 2015	December 2015	12/01/11 – 02/29/15
January 2016	January 2016	01/01/12 – 03/31/15
February 2016	February 2016	02/01/12 – 04/30/15
March 2016	March 2016	03/01/12 – 05/31/15
April 2016	April 2016	04/01/12 – 06/30/15
May 2016	May 2016	05/01/12 – 07/31/15
June 2016	June 2016	06/01/12 – 08/31/15
July 2016	July 2016	07/01/12 – 09/30/15
August 2016	August 2016	08/01/12 – 10/31/15
September 2016	September 2016	09/01/12 – 11/30/15

Data fields included in the extract:

Provider ID	Beneficiary City & Zip Code
Beneficiary ID	Beneficiary County Code & Name
Beneficiary Name (Last, First, Middle)	Specimen Date(s)
Beneficiary Date of Birth	Lead (Pb) Result(s)
Beneficiary Street Address	

## PROCESS

The Excel data file is zipped and password-encrypted, then automatically transmitted to each health plan.

### Notes:

- Ninety percent of all blood lead test results are loaded into CHAMPS within one month from the time the specimen is drawn.
- To assure the accuracy of the UCI-CHAMPS linkage, it is essential that blood lead information (which is the responsibility of the provider who draws or orders the test) include: 1) the correct name, 2) date of birth, 3) gender, and 4) Beneficiary ID.

If discrepancies are identified, please contact Qian (Daisy) Peng at [pengq@michigan.gov](mailto:pengq@michigan.gov) or 517-241-1388.

**To:** Scott, Robert L. (DHHS) <[ScottR9@michigan.gov](mailto:ScottR9@michigan.gov)>; Stanbury, Martha (DHHS) <[stanburym@michigan.gov](mailto:stanburym@michigan.gov)>  
**Subject:** UPDATE: Flint map randomization

Martha and Bob,

Attached is a new map of EBL cases in Flint randomized by a method used by Ed Hartwick. It's better than the previous map I generated where cases were scattered at random throughout the city. In the revised map, cases were shifted slightly from their original point so some of the clustering still holds up. This is probably the final map that GCHD could use for their presentation.

Let me know if you have any questions or if you want to discuss.

Thank you,  
Junaid

**Subject:** Flint map with randomized points

Martha and Bob,

Attached is the map of Flint with points randomized by zip code, meaning I calculated the # of cases with BLL between 5 and 9 ug/dL (inclusive) and with BLL  $\geq 10$  ug/dL for each zip code and plotted the same number of cases per zip code in random locations within the zip code boundary. Unfortunately, as we originally suspected, the clustering of cases depicted in the original map (also attached) is lost with this randomization.

Junaid

# Flint Area Children with Elevated Blood Lead Levels 2010-2014

- Child w/ confirmed BLL  $\geq 10$  ug/dL
- ⊗ Child w/ BLL 5 to 9 ug/dL

**Subject:** RE: 2014 lead data  
**Importance:** High

I talked with Jennifer Eisner and here is what we need:

Only the 2014 data (not 2015 since we don't typically release a year's data before the year is completed), by zip code for all of Michigan with small cells suppressed. And only confirmed venous tests as CLPPP has done for previous years: we'll explain that we're including capillary tests in the Flint reports in an effort to capture all possible EBL children.

Could I please have an estimate of when this can be done?

**Subject:** RE: 2014 lead data  
**Importance:** High

Ok, I deleted all the chatter in-between.

I believe the request is for annual 2014 and 2015 (not by quarter) for all Michigan zip codes (suppressing cells less than 6). The data provided should match what we're reporting to the Director/Governor, so retain the highest test whether venous or capillary.

Jennifer/GERALYN: is that accurate?

All --

A reporter with Bridge Magazine is requesting the statewide 2014 (and if possible, 2015) CLPPP data. Bob sent me the attached county-level info for 2014 which I have not shared yet, as it's not the final report.

We would like to touch base to make sure the data has been finalized and reviewed by epi before it's posted online.

Eden -- we'll reach out to you in the morning to discuss the media request. Beyond the data, the reporter is also interested in discussing home lead investigations.

**Subject:** RE: Sit Rep report 192 Kids

I currently have 187 children on the Master List for Flint.

Of those 187 children (based on a match from the Warehouse):  
156 are Medicaid-eligible now and at time of EBLL (83%)  
18 were Medicaid-eligible at time of EBLL, but not currently (10%)  
7 were Medicaid-eligible previously, but not at time of EBLL or currently (4%)  
6 were never Medicaid-eligible (3%)

**STUDY PROPOSAL TEMPLATE** *You may attach additional pages if needed, or recreate form using prescribed headings and subheadings.*

**Study Title:** Analysis of Pediatric Blood Lead Levels

**Study Team Members:** (Names, Degrees, Affiliations, Study Team Roles)

Mona Hanna-Attisha MD MPH, Director Pediatric Residency Program, Hurley Children's Hospital at Hurley Medical Center and Assistant Professor, Department of Pediatrics and Human Development, Michigan State University College of Human Medicine, Principal Investigator

Jenny LaChance MS CCRC, Hurley Medical Center Research Department, Research Analyst and Co-Investigator

Rick Sadler, PhD, Assistant Professor of Family Medicine, Division of Public Health, College of Human Medicine, Michigan State University, Research Analyst and Co-Investigator

Allison Schnepf MD, Pediatric Resident, Hurley Children's Hospital at Hurley Medical Center, Co-Investigator

## I. INTRODUCTION

The INTRODUCTION provides problem identification and justification. It serves to clarify the purpose of your study intentions—and the potential benefit of conducting the work.

### 1. Purpose or Statement of the Problem

(Describe why the problem is important; the scope/severity of the problem.)

In April of 2014, the City of Flint changed their water supply from the Detroit river to the Flint river. Flint had Safe Drinking Water Act violations for trihalomethanes after switching water sources. In response, the City of Flint dramatically increased chlorine disinfection, thus changing the oxidation reduction potential and allowing the metal on the lead pipes to leach into the water without necessary corrosion control. Researchers from Virginia Tech University have reported increases in water lead levels (WLL); however, it is unknown if there have been any changes in blood lead levels (BLL). Lead is a potent neurotoxin that leads to irreversible brain damage in vulnerable populations, especially children. Lead screening is routinely done by pediatricians and by county health departments for children who reside in high-risk populations and for children insured by Medicaid. Hurley Children's Clinic cares for the largest number of high-risk Medicaid children in Genesee county and Hurley Medical Center laboratory runs the majority of blood lead tests in the county.

### 2. Background or Review of the Literature

(Provide a critical appraisal of existing knowledge and how your work may help to fill identified gaps.)

According to the Advisory Committee on Childhood Lead Poisoning Prevention, “no measurable level of blood lead is known to be without deleterious effects, and once engendered, the effects appears to be irreversible.”<sup>i</sup> The consequences of lead poisoning impact many biological processes, most notably intelligence, behavior and overall life achievement<sup>ii</sup>. Increases in blood lead levels from 1 to 4 ug/dL has been associated with a change in mean IQ of approximately -2.3 to -5.2 IQ points.<sup>iii</sup> Considering the irreversible and life-altering impact of lead exposure, primary prevention has been advocated to eliminate exposure.

With the removal of lead from gasoline and paint, the incidence of lead toxicity has decreased over the decades<sup>iv</sup>; however, the role of lead in drinking water has played an increasingly prominent role as other sources of lead exposure have reduced and with increased knowledge of the impact of low level lead toxicity<sup>v</sup>. In 2001, Washington DC changed their treatment chemical which caused lead plumbing corrosion and left thousands of children with lifelong health risks from elevated lead levels.<sup>vi</sup> In April of 2014, the City of Flint changed their water source from the Detroit to the Flint river. The Detroit water system contained anti-corrosion chemicals, but the new Flint water source did not.<sup>vii</sup> Tests of the Flint water by Virginia Tech University Professor Marc Edwards and his team have revealed elevated lead levels in Flint drinking water.<sup>viii</sup>

### 3. Specific Aims

(Specific aims should be few in number and very succinct, not more than one or two sentences per aim. Number your aims so that these can be traced to the Project Design and Data Analysis sections of your Methods.)

- 1) Calculate the mean blood lead level (BLL) of Flint children (who receive Flint water) under the age of five years in different time intervals before and after water switch beginning from January 1, 2013 to ~~current~~September 15, 2015.
- 2) Calculate the percentage of Flint children (who receive Flint water) under the age of five years with elevated blood lead (EBL) in different time intervals before and after water switch beginning from January 1, 2013 to ~~current~~September 15, 2015.
- 3) Examine any relationship between water age at child's home and child's BLL status.
- 2) Continue to assess the mean BLL and percentage of children with EBL in Flint past September 15, 2015 and compare these percentages to the pre time period (January 1, 2013 to September 15, 2013) and/or initial post water switch time period (January 1, 2015 to September 15, 2015.)
- 5) Identify elevated BLL areas within Flint based on GIS mapping at least quarterly starting in 2016.

### 4. Significance or Study Rationale

(Describe long-range objectives.)

**Formatted:** Font: Times New Roman

**Formatted:** Not Highlight

**Formatted:** Normal, No bullets or numbering

With no reported changes in blood lead level data, it is unclear if the change in Flint water source has impacted pediatric lead exposure. Information about the change in the mean and the change in the percentage of elevated blood lead levels from a large sample of potentially exposed impacted children has tremendous public policy, public health and socioeconomic implications.

## **II. METHODS**

The METHODS is a 'blueprint' of your study plan. It outlines the steps that you will undertake in order to successfully conduct the study.

### **1. Setting**

(Where will the work be conducted? Identify and describe the setting or settings.)

City of Flint; City of Flint will be determined by residence of the following zip codes: 48501 to 48507. Additionally, recipients of Flint water will identified with GIS or other software assistance. This is the area that primarily was affected by the change in water source. The city of Flint has a population just below 100,000 (99,002 estimated in 2014) and 8% are below age 5. In Flint, 41.5% of residents are below the poverty level (compared to 16.8% in Michigan).

### **2. Subjects**

(Describe population/sample; demographic profile/characteristics; subject inclusion and exclusion criteria; anticipated number and the likelihood of recruiting number.)

All children less than five years old, with an emphasis on children less than 15 months old, with blood lead levels who live in the city of Flint. Additionally, children less than 5 years who had lead levels through Hurley Laboratory who do not live in the city will be analyzed as a comparison group.

Additionally, the state of Michigan will provide blood lead data on all children less than 6 years old who live in Genesee County. (These children will be identified as living in Flint city or not based on GIS analysis.)

### **3. Project Design**

(Describe how you will conduct the project. Describe study personnel; subject recruitment and informed consent processes; intervention descriptions; resources/materials; equipment. Provide a tentative time line for conducting project work.)

Phase 1- Previously approved by MDHHS and Hurley IRBs in Fall 2015

This is a retrospective study of blood lead levels. This project will be conducted through the request of various data sets (as described below). No informed consent will be needed. There will be no intervention as part of the study. The principal investigator will request data from the below sources. Jenny LaChance will be primarily responsible for getting data into a format that can be analyzed with statistical software. Both investigators with Dr. Sadler will review, analyze, and disseminate data. Dr. Schnepf will assist with review of analysis and dissemination of information. Our tentative timeline is that data would be received starting after IRB approval (~September 2015). Once we have data, we will start analysis. Because different data sets may

be received at different times, we may be received data for the next 6-12 months while analyzing other data sets. Once we have results, findings may be presented or published for up to 5 years.

#### Data sets

Blood lead levels for all Hurley Children's Clinic patients aged less than five years will be obtained from Epic EMR. A report will be requested to include patient's medical record number, full address, date of birth, date of blood draw, zip code, full address, and blood lead level.

Blood lead levels for all patients aged less than five years will be obtained from the Hurley lab electronic system. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, full address, blood lead level, and primary medical doctor. The approximate water age received at each child's home will be determined for each child.

Blood lead levels for all patients in Flint (and Genesee County) aged less than five years will be obtained from MDHHS Childhood Lead Poisoning Prevention Program database (which sends data to the MDHHS Data Warehouse) from the state of Michigan. A report will be requested to include child ID number, date of birth, date of blood draw, address with zip code, blood lead level, and specimen type.

Blood lead levels for all patients aged less than five years will be obtained from the Greater Flint Health Coalition's Children's Healthcare Access Program (CHAP). CHAP sites include Hurley Children's Clinic, Mott Children's Health Center, Hamilton Health Center and Akpınar Pediatrics. A report will be requested to include patient's medical record number, date of birth, date of blood draw, zip code, blood lead level, and primary medical doctor.

Additionally, demographic data will be requested when available. Demographic variables may include gender, race, and insurance type, if available. Finally, ward or risk level of lead (based on water data) may be determined from GIS or address information.

Lastly, water service line information (lead/no lead, etc) will be incorporated into data sets as possible. This information will be received by the city of Flint.

Phase II: Amended study protocol {January 2016} to include data prospectively from MDHHS Childhood Lead Poisoning Prevention Program data base.

The State of Michigan will provide BLL results for all children tested in Genesee County since September 15, 2015 in January 2016 (estimated) and then will provide updated results every two weeks until December 2017 or earlier, as mutually agreed. The data will be limited to the fields specified above for the retrospective analysis.

#### **4. Data Collection**

(Describe the data collection/storage plan. Include all data collection tools and process with the proposal. State how you will assure confidentiality.)

Data will be collected and stored on secure/encrypted memory sticks (or desktop of Hurley computers) received from Hurley's Informational Technology department. State of Michigan will provide

data in a secure electronic format that will then be stored on encrypted memory sticks or desktop of Hurley computers. Patient medical record numbers/Child ID numbers are only obtained to identify the same patient with multiple lead levels. After identification of duplicates, medical record numbers/Child ID numbers will be removed. Date of birth and date of lead level will be used to calculate age at time of lead lab result and timing in relation to the change in water source. Addresses will be used to determine who lives within the area served by Flint water. GIS or other software may assist with this.

Date of birth will be removed from data files once age has been calculated at time of lead level blood draw. Date of lead level blood draw will be kept in raw data file (but not analysis file) until 1-year post dissemination in case there is a need to redefine pre/post based on other information learned or requests from others. Addresses must be kept with data file and GIS analysis file as these are the basis for the GIS analysis. Addresses will be destroyed 1 year post dissemination following the completion of the study following the completion of the study as this allows time for other researchers to question work and for us to produce other information if necessary based on commentary/questions. At that time, only GIS maps that were created will be kept. Published GIS maps will not identify specific street locations of specific study subjects' homes or any other information that could lead to a breach of confidentiality.

## 5. Sample Size

(For comparative research, this should be a formal sample size calculation, which the Research Center can help calculate. For descriptive or pilot studies, justify based on precision of the estimate, pragmatic issues based on resources, number of patients available, etc. or other factors.)<sup>\*</sup>

### Phase I:

Sample size of pre-switch first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

Sample size of post-switch (one year post to September 15, 2015) first-time lead levels for children five years and less: estimated 800 from Hurley lab data and estimated at 2500 from state data.

~~Additionally data from September 15, 2015 will be received from the state of Michigan. These data will be used to monitor changes and is not part of the original sample size analysis. Data will be received on all lead tests every 2 weeks for children less than 6 years for approximately the next 2 years.~~

Formatted: Not Highlight

If there is a 5% increase in elevated lead levels from 3% to 8%, then this sample will have adequate power. With an alpha of 0.05 and a power 0.80, 882 pre subjects and 221 post subjects would be needed.

### Phase II:

Data will be provided by the state of Michigan going back to September 15, 2015 and then prospectively on all children in Genesee County with blood lead tests until the end of the study period (approximately December 2017). This is population data not a sample of cases. Thus the study will have a complete dataset of all children tested for lead from the beginning of the study until its closure.

<sup>\*</sup>If you are conducting descriptive or exploratory work as opposed to an experimental study, you may provide a subject number justification as opposed to a power analysis.

## 4. Data Analysis

(Describe statistical techniques to be applied in order to answer your research question or test your hypothesis; plan for interpretation and dissemination; person responsible. For descriptive studies, precision of the primary specific aim should be included.)<sup>\*</sup>

#### Phase I:

Descriptive statistics will be used to calculate blood lead level means (or geometric means) and percentage of children with elevated blood lead levels. Comparisons will be made with independent t-test/1 way ANOVAs and chi-squared analysis for groups and subgroups (age, risk level, etc). Additionally, regression modeling may be used to look at the impact of specific area and/or demographics on lead levels, if appropriate. Finally, GIS analysis may assist with identification and analysis of those who receive water and incidence of EBL and levels of lead.

#### Phase II

In phase II, data will be examined at least quarterly using GIS mapping and analysis to examine if there are any areas within Flint with high(er) predicted BLL. This analysis will allow for the identification of any new problem areas and may allow for prioritization of response.

Additionally, data from the pre time period (January 1, 2013 to September 15, 2013) and/or initial post water switch time period (January 1, 2015 to September 15, 2015) will be compared to later time periods (including but not limited to): follow up time period 2 (January 1, 2016 to September 15, 2016). Statistical techniques may include chi-square analysis, regression modeling, independent t-tests, and 1 way ANOVAs for groups and subgroups (based on age, risk levels, etc). This would be similar to the analysis conducted in Phase I.

**Formatted:** Indent: Left: 0.75", No bullets or numbering

**Formatted:** Font: Times New Roman

**Formatted:** Font: Times New Roman

**Formatted:** Font: Times New Roman

Jenny LaChance and Rick Sadler will be primarily responsible for data analysis.

~~<sup>\*</sup>You are encouraged to seek statistical consultation through a university or hospital research department.~~

**Attachments:** Flint Action Plan 11-20-15 v2.docx; 11182015 FLINT BLOOD LEAD CM - weekly status tracking form.docx

I updated the action plan from our Tuesday calls. Feel free to make changes. I wasn't sure if you want to share with Geralyn before sending to Nick.

**Flint Water Public Health Response: MDHHS Action Plan**  
**Weekly Update 11-20-15**

TASK	STATUS	ACTION	DATE COMPLETED
<b>Filter Distribution</b>	Residents may continue to obtain filters from GCCARD (both sites 9-4PM) and MDHHS clients can continue to obtain filters at the two MDHHS office locations or the GCCARD sites.	No action indicated.	NA
<b>Filter Replacement Distribution</b>	<p>The procedure is in place for replacement cartridge distribution including an abbreviated application for residents to apply for and obtain cartridge replacement. Cartridge replacement will occur at same locations as filter sites. DHHS is also placing an order for 750 replacement filters for the 8-cup Zerowater filters. 9000 Brita replacement filters on hand with an additional 10,000 readily available when needed. Total available= 19,000</p> <p><u><b>United Way requested that DHHS purchase Pur filter replacements. GCARD requests that no more bottled water be donated. They have plenty in stock. Cash is preferred. City of Flint set up distribution point in City Administration office building. GCHD will be providing City of Flint with Pur Filters. The Brita filter requires a form for MDHHS be filled out; there are some concerns that undocumented members of population will avoid Brita filters for this reason.</b></u></p>	DHHS and GCCARD will begin issuing the replacement filters the week of November 2 <sup>nd</sup> .	<b>Ongoing</b>
	MDHHS is currently coordinating with GCARD on publicity for distribution of the replacement filters. United Way will provide Pur Filter Replacements. United Way will also be purchasing filter units for school water fountains. Press release planned Monday 11/2 re: pick up of replacement filters, videos to be posted on websites and you tube.	Jen Eisner will work with Hilda McShane	Completed 11/2
<b>Public Education Proper Filter Use</b>	When used improperly, the filters will exceed their capacity limit in a much shorter time frame thereby increasing need for filter replacement much sooner than expected. Develop NEW public education material about proper use of cartridge AND how to obtain filter replacement cartridges, targeted for release week of October 26 during lead awareness week.		Completed
	Request made for written instructions on filter cartridge replacements for nurse case managers to take on home visits. Wes is working to complete a packet for nurse case		<b>Pending</b>

TASK	STATUS	ACTION	DATE COMPLETED
	managers which will include information on filters.		
	Video created with Home Depot demonstrating replacement of the Brita replacement filter. DEQ receiving questions about meters on the water filter pitchers delivered to the schools which are likely Zerowater Filters.	The video added to the gov/flintwater website.	Completed 11/2
	Video will be added to nurse training- CLPPP.		Completed 11-10
<b>Lead Testing Protocol:</b>	<p>Draft protocol has been completed, undergoing final review. Protocol calls for testing:</p> <p>Priority groups-</p> <ul style="list-style-type: none"> <li>• Confirmatory venous testing for children who had venous testing (115 children)</li> <li>• Children in day care, Head Start</li> <li>• children attending 3 schools (Freeman, Eisenhower, Brownell)</li> <li>• Children residing in high risk zip codes (03, 04)</li> <li>• All other students</li> </ul> <p>Protocol will be announced in a joint MDHHS/GCHD Press release.</p>	Press release has been cleared with Governor's Office.	Completed 10-28
<b>Blood Lead Testing: 9/28/15-10/23/15</b>	<p>CLPPP processed 580 tests from Flint zip codes since 9-28-15; 5 children were reported with elevated lead blood levels.</p> <p>There approximately 200 children that have been identified for follow-up.</p>	MDHHS has arranged a contract with the GCHD to provide nurses for the follow-up.	Contract completed in E-grams as of 10-23
	Cross reference list of children with elevated lead levels with filter distribution data to ensure household has a filter. (Peeler/Scott) So far only about 20% of approximately 200 children with EBL are known to have received a filter. GCHD will deliver filters to these homes as they are doing the case follow-up. GCHD will provide weekly updates.	Send list to Kris S (done)	In process
	<p>A group will develop reporting metrics and system to track same: Linda Dykema, Wes Priem, Michele Bruneau, Bob Scott and group met to discuss metrics. Plan to produce first detailed report for internal review the week of Nov. 9<sup>th</sup>. A simplified version for external dissemination will be released after internal review.</p> <p>Linda is working on an analysis of blood lead tests done since 9-28-25. Epi will assist with this analysis. Still fine-tuning the report. Report has been completed along with talking points.</p>		Completed

# FLINT BLOOD LEAD LEVEL TESTING REPORT for week ending 11/13/2015

		A	B	C	D	E	F
	Target Population	# contacted and offered case management	% of total (A/X)	# of children receiving CM	% of total (C/X1) and (C/A)	# of Medicaid claims filed	% for whom Medicaid claims filed (E/C)
PRIORITY LEVEL 1	All children with elevated Capillary > 5 since April 2014 (total = 84)	3	4%	NA	NA	NA	NA
	All children with newly elevated Venous > 5 since April 2014 (total = 79)	0	0%	1	1.3%	1	100%
	All children with new elevated Venous $\geq$ 5 since October 2015 (total = 3)	2	67%	0	0%	0	0%
	All children with elevated Capillary > 5 since Oct 2015 (total = 5)	0	0%	NA	NA	NA	NA
	<b>TOTALS</b>						

*\* this number will change weekly*

**NOTES:** GCHD CM staff were in training all day 11/10, closed for holiday 11/11, and were at an outreach clinic on 11/12 for the afternoon away from the office. Note that children with capillary are not offered case management until result confirmed by venous sample, the 4% in column B represents number reached via phone. FYI-families may be contacted in one week, first home visit to open to CM may not occur in same week due to scheduling, etc. This information reflects activities for this week only.

Metrics included in contract

1. Number and percentage of target children with elevated blood lead levels of  $\geq$  5 ug/dL that are successfully contacted and offered case management services. A and B
2. Number and percentage of target children receiving case management services. C and D
3. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits. E and F

**Subject:** EBL investigation budget request

Kim,

Per your request, attached are estimated budgets for EBL investigations, toxicology staff support, and printing of materials. Options 1 and 2 are different proposals for hiring EBL investigators. Option 2 requires using private sector firms for the investigations. We have a quote from one by e-mail and another called in a bid. The call was from a new firm and their bid was low enough to cause concern. It was clear they didn't know what they were doing. Option 2 also includes moving one of our enforcement staff to 50% funding with any new supplemental funds to facilitate community work and provide oversight to the work of the private contractors.

We have also budgeted time for toxicology staff (Jennifer Gray) and an environmental health educator (Michelle Bruneau). Both are on federal funds and we found out the funder will not allow us to dedicate their time to Flint because Flint-specific activities are outside the scope of the federal funding objectives. Their work will be critical to this effort.

Option 1 + toxicology + health education + outreach materials = \$ 626,936

Option 2 + toxicology + health education + outreach materials = \$ 441,976

If you have questions please contact me and if I am not available please reach out to Linda Dykema or Wes Priem.

## MDHHS Division of Environmental Health

City of Flint Budget Proposal

10/8/2015

### Elevated Blood Lead (EBL) Environmental Investigations

Approximately 250 homes will need EBL investigation over the next year based on current SOM data and the projected increased of testing in the high risk and surrounding zip codes in the city of Flint. If fewer homes require investigation, excess funds could be moved to abatement. Average cost to abate a home is \$10,500.

#### Qualifications for EBL endorsed home inspector:

1. Inspector/Risk Assessor Certification:
  - a. Complete core lead basics course
  - b. Lead Inspector Course
  - c. Lead Risk Assessor Course
  - d. Bachelor's Degree and at least 1 year of experience in construction or environmental field
  - e. Associates Degree and at least 2 years of related experience in construction or environmental field
  - f. Professional certification of Industrial hygienist , professional engineer, registered architect or other safety or environmental field based upon 4 year college degree
2. Pass EBL State Examination

Common practice is the best suited individual for this work has both knowledge of housing construction principles and environmental investigation experience.

**Option1.** MDHHS can utilize the existing master agreement with SEMHA to hire EBL investigators.

Budget Line Items	Cost per FTE	Comments	Total (4) Positions
Salary	\$50,000	50-60 homes each per year	\$200,000
Fringe	\$20,000	40%	\$80,000
Travel	\$5,000	Millage, food	\$40,000
Laboratory Analysis	\$19,800	\$27.50 =State Rate, \$10.00 =Private lab	\$79,200
XRF lead analyzer	\$25,000		\$100,000
Supplies and materials	\$4,000	Computer, paper, labels, cell phone, CDs	\$16,000
Indirect	\$4,940	5% of total contract (excluding XRF purchase)	\$19,760
<b>Total</b>	<b>\$128,740</b>	<b>Total</b>	<b>\$534,960</b>

**Option 2:** Alternatively, MDHHS could contract directly with various private firms with existing expertise to conduct EBL investigations under SOM oversight.

Budget Item	Cost
250 homes at \$1,100 per home	\$275,000
SOM Program Oversight, 50 % Courtney Wisinski (Industrial Hygienist)	\$75,000
<b>Total</b>	<b>\$350,000</b>

### **Technical Support Staff:**

Toxicological expertise will be needed to address the complexity of exposures to lead in drinking water, soil, lead paint and other media. All current staff in the Toxicologist classification are supported by federal grants that will not allow them to work on the city of Flint drinking water problem, thus other support is needed. The Toxicologist will work in cooperation with the MDEQ Office of Water.

In addition, support is requested for a health educator to develop public health educational materials and coordinate outreach efforts with other SOM and local agencies.

Note: Because the technical issues are complex, hiring new staff to conduct these activities is not prudent or recommended.

Budget Item	Cost
SOM Toxicologist, 25% Jennifer Gray, Phd	\$34,976
Contractual (MPHI) Health Educator, 25% Michelle Bruneau, MA	\$32,000
<b>Total</b>	<b>\$66,976</b>

### **Material Costs for Community Outreach Efforts:**

\$25,000 in funds will be needed to produce and print pamphlets, brochures and other outreach materials. Cost estimates can be provided at a later date.

Did you want to send the attached table to Kim or wait until she reaches out to the program areas regarding the supplemental funding for Flint?

When I spoke to Kim Stephen last week about a budget for the supplemental funding, I indicated that Wes had solicited some bids from private firms to do the EBL investigations in Flint.

At that time, he had received one written proposal that was forwarded to Kim and had also received a phone call from another company.

Kim indicated that as long as Wes had reached out to several firms, even if there had been no response, that was sufficient. She was going to contact DTMB to see if we could contract with a firm/s directly rather than going through an RFP process given the situation.

Sue, as discussed I take responsibility for not having those notes from the 1230 meeting on Tuesday.

That being said, here is the plan:

**For the 12:30 meetings:** Jon will take notes, assemble, and have available for approval by Sue by 3 PM. Assuming approval, we'll have Cheryl email to the folks on the call by 5 PM the same day.

**For the 3:00 meetings:** Jon will take notes, assemble, and have available for approval by Sue by 9 AM the next morning. Assuming approval, we'll have Cheryl email to the folks on that call by 10 AM.

**Population Health and Community Services Administration**  
**Flint Water Daily Briefing Summary**

**Daily Briefing**

PPI  
Access Code: PPI

**Date:** 10-13-15

**Attendees:** Sue Moran, Mikelle Robinson, Linda Dykema, Mark Miller, Corinne Miller, Rashmi Travis, Nancy Peeler, Linda Scott, Kris Schoenow, Eden Wells, Jennifer Lixey, Richard Thelen, Elizabeth Hertel, Sheryl Thompson, and Geralyn Lasher

**Daily Activity Summary**

**Filter/Water Distribution**

- Sheryl Thompson will be the DHHS lead instead of Richard Thelen.
- There are two methods being utilized to collect filter distribution data. Kris Schoenow and GCHD are discussing how to collect the same data fields on GCHD's cloud-based database.
- Filter distribution at four sites started on October 6<sup>th</sup>
- United Way purchased filters for schools and some filters have been distributed to daycares in the city. Using the Genesee County Community Action Resource Department.
- GCHD has helped distribute ~4,000 filters, supplied by the United Way, to individuals with chronic diseases and other vulnerable populations.
- All LHD filters have been provided by the United Way.
- 9000 filters have been ordered and the next step for them is to start to plan the replacement phase for those that picked up filters.
- Some sites have distributed water pitcher filters. These will have different replacement filters.

**Blood Testing**

- Nancy Peeler has protocol in place to address prioritizing populations for testing
- A protocol for blood testing is to be developed by Eden Wells, Rashmi Travis, Nancy Peeler, Toni LaRocco (GCHD) and Dr. Gary Johnson (GCHD)
- Protocol to be ready by Oct 14
- 151 children from all Flint zip codes have been identified with previous blood lead levels of 5 or over since April, 2014.
  - 85% of the children are Hurley patients. 92% of the children receive Medicaid.
  - 75 of the children need venous draws; 76 need venous retesting.

**EBL Investigations**

- There are two options: hire investigators through SEMHA or contract with a vendor.

- Contracting with a vendor appears to be the most cost-effective solution. Hiring and training investigators would be time prohibitive.
- Several bids were collected and shared with the budget office.

### **Communications**

- The Frequently Asked Questions (FAQ) that was derived from information collected by GCHD is waiting on approval from MDHHS Communications.
- An infographic is currently being developed and will be submitted to MDHHS Communications for approval.
- All external communications need to go through MDHHS Communications; however, internal communications, such as epidemiological reports, are to be sent to Eden.

**Subject:** FW: Draft Action Plan

This is the short version that she wants input into the attached chart.

Over the last week, DHHS (PHCSA) actions focused on supporting Genesee County Health Department and other state departments in coordinating:

**Filter/Water Distribution:**

-changes to the cloud-based database to compile all records of filters distributed and type of filter (in preparation for replacement filter distribution)

**Blood testing and Case Management Follow-up:**

- protocol finalized for blood testing and follow-up
- protocol development for case management of confirmed children with EBL 5 and over (will be finalized by Friday)
- contract (project) via e-grams to GCHD for nurse case management

#### **Elevated Blood Level Investigations:**

- bids taken and contract development underway for contractor to conduct investigations in homes with elevated blood lead (EBL)

#### **Communications:**

- completion of FAQ and Infographic for posting on the Governor's website
- assisted MDARD on development of communication to food service establishment re: City of Flint water
- development of a letter and resources for schools to send to parents (education and encouraging testing) and a letter to providers, daycares, and Head Start Programs
- outreach to area laboratories regarding reminder of lead reporting requirements
- daily internal calls and daily calls with GCHD
- response to public phone calls about the Flint water issue

#### **Miscellaneous:**

- support to DEQ for water testing in the schools developing protocol for water testing and screening levels for evaluation of water data of schools
- participate (Linda and Eden) in the Mayor's Technical Advisory Committee and in weekly subcommittee meetings to address water sampling efforts in Flint schools
- began discussions on evaluation metrics and reporting for investigations and case management

## Michigan Department of Community Health (MDHHS) Flint Water Action Plan

Action	Local Lead	MDHHS Lead	Tasks
Filter/Water Distribution	Tamara Brickley (Genesee County Health Department-GCHD)	Sheryl Thompson, MDHHS	<ul style="list-style-type: none"> <li>- Coordination of distribution (GCHD)</li> <li>- Identify at-risk sub-groups (GCHD)</li> <li>- Amend cloud-based filter database to compile all records of filters distributed (including filter type) in preparation for replacement filter distribution</li> <li>- Ordering filter replacements (MDHHS)</li> </ul>
Blood Testing	Tony LaRocco (GCHD) Possible partners: <ul style="list-style-type: none"> <li>- Hurley</li> <li>- Great Flint Health Coalition</li> <li>- MIHP</li> <li>- LHD</li> <li>- Schools</li> </ul>	Dr. Eden Wells/ Nancy Peeler (CLPPP)	<ul style="list-style-type: none"> <li>- Test all               <ul style="list-style-type: none"> <li>o Students 0-16</li> <li>o Priorities:                   <ul style="list-style-type: none"> <li>▪ 3 schools</li> <li>▪ 2 zip codes</li> <li>▪ ages 0-15</li> </ul> </li> </ul> </li> <li>- Convene meeting with GCHD and all potential partners (MDHHS)               <ul style="list-style-type: none"> <li>o Partner with schools- information about testing sites options distributed through school districts to parents</li> <li>o Partner with Great Flint Health Coalition-network to develop testing sites and information about testing to healthcare providers</li> <li>o Partner with Hurley/McClaren/Genesys</li> <li>o Partner with MIHP/Home Visiting Program</li> </ul> </li> <li>- Confirm that the state lab has capacity to handle increase in tests-</li> <li>- Blood testing and follow-up protocol has been finalized</li> <li>- Develop protocol for case management of confirmed children with EBL &gt;5</li> <li>- Contract (project) via EGRAMS to GCHD for nurse case management</li> </ul>
Case Management Follow Up	Tony LaRocco (GCHD)	Eden Wells/ Nancy Peeler (CLPPP)	<ul style="list-style-type: none"> <li>- Identification of all current positives-confirmatory testing for &gt; 5 mcg/dl (as of April 2014)</li> <li>- Maintain registry of all tests performed (-/+)</li> </ul>

			<ul style="list-style-type: none"> <li>- Follow-up all cases &gt;5 mcg/dl with the CLPP Case Management protocol</li> </ul>
Elevated Blood Level Investigations( all > 5 mcg/dl)	Dawn Hallwood (GCHD)	Linda Dykema	<ul style="list-style-type: none"> <li>- Secure financial resources necessary to support environmental health response</li> <li>- Follow-up CLPPP to see if immediate funds available</li> <li>- Recommendation to contract with Lead Investigation company thru SEMHA-licensed investigators</li> <li>- Bids taken and contract development underway for contractor to conduct investigations in homes with elevated blood level (EBL)</li> </ul>
Communications	Hilda McShane (GCHD)	Geralyn Lasher	<ul style="list-style-type: none"> <li>- Daily MDHHS and GCHD phone calls (3PM)</li> <li>- Provide provider education- links sent for Governor's site to GCHD 10/12</li> <li>- Provide public education</li> <li>- Provide risk education</li> <li>- Provide links with lead prevention information to Flint</li> <li>- Completion of FAQ and infographic for dissemination on Governor's website</li> <li>- Assisted MDARD on development of communication to food service establishments</li> <li>- Development of a letter and resources for schools to send to parents (educational materials to encourage testing) and a letter to providers, daycares, and Head Start programs</li> <li>- Outreach to area laboratories regarding reminder of lead reporting requirements</li> <li>- Daily internal calls and daily external calls with GCHD</li> <li>- Response to public phone calls about the Flint water situation</li> </ul>
Miscellaneous	TBD	TBD	<ul style="list-style-type: none"> <li>- Provide support to DEQ for water testing in the schools, development of water testing protocol, and screening levels for evaluation of water data of schools</li> <li>- Participate in the Flint Mayor's Technical Advisory Committee and in weekly</li> </ul>

			<p>subcommittee meetings to address water sampling efforts in Flint schools</p> <ul style="list-style-type: none"><li>- Began discussions on evaluation metrics and reporting for investigations and case management</li></ul>

**Subject:** FW: Draft Action Plan

This is the short version that she wants input into the attached chart.

Over the last week, DHHS (PHCSA) actions focused on supporting Genesee County Health Department and other state departments in coordinating:

**Filter/Water Distribution:**

- changes to the cloud-based database to compile all records of filters distributed and type of filter (in preparation for replacement filter distribution)

**Blood testing and Case Management Follow-up:**

- protocol finalized for blood testing and follow-up
- protocol development for case management of confirmed children with EBL 5 and over (will be finalized by Friday)
- contract (project) via e-grams to GCHD for nurse case management

**Elevated Blood Level Investigations:**

- bids taken and contract development underway for contractor to conduct investigations in homes with elevated blood lead (EBL)

**Communications:**

- completion of FAQ and Infographic for posting on the Governor's website
- assisted MDARD on development of communication to food service establishment re: City of Flint water
- development of a letter and resources for schools to send to parents (education and encouraging testing) and a letter to providers, daycares, and Head Start Programs
- outreach to area laboratories regarding reminder of lead reporting requirements
- daily internal calls and daily calls with GCHD
- response to public phone calls about the Flint water issue

**Miscellaneous:**

- support to DEQ for water testing in the schools developing protocol for water testing and screening levels for evaluation of water data of schools
- participate (Linda and Eden) in the Mayor's Technical Advisory Committee and in weekly subcommittee meetings to address water sampling efforts in Flint schools
- began discussions on evaluation metrics and reporting for investigations and case management

**Subject:** update from Eden

Eden has spoken with Tony LaRocco and Dr. Mona Hanna-Attisha, and neither of them are aware of any children from Flint being hospitalized for lead toxicity. Both felt that they would have heard if that is the case. Just to be sure, Eden is planning to call the two other Flint area hospitals this morning to determine if they have admitted any children for this. We will keep you updated.

**Flint Water Public Health Response: MDHHS Action Plan**

**Updated 10-28-15**

<b>TASK</b>	<b>STATUS</b>	<b>ACTION</b>	<b>DATE COMPLETED</b>
<b>Filter Distribution</b>	Residents may continue to obtain filters from GCCARD (both sites 9-4PM) and MDHHS clients can continue to obtain filters at the two MDHHS office locations or the GCCARD sites. As of October 22, DHHS/GCCARD has issued 9728 filters, 95 pitchers.	No action indicated, informational only.	NA
<b>Filter Replacement Distribution</b>	The procedure is in place for replacement cartridge distribution including an abbreviated application for residents to apply for and obtain cartridge replacement. Cartridge replacement will occur at same locations as filter sites. DHHS is also placing an order for 750 replacement filters for the 8-cup Zerowater filters. 9000 Brita replacement filters on hand with an additional 10,000 readily available when needed. Total available= 19,000 <u><b>MDHHS is currently coordinating with GCARD on publicity for distribution of the replacement filters.</b></u>	DHHS and GCCARD will begin issuing the replacement filters the week of November 2 <sup>nd</sup> .	<b>Pending</b>
<b>Public Education Proper Filter Use</b>	When used improperly, the filters will exceed their capacity limit in a much shorter time frame thereby increasing need for filter replacement much sooner than expected. Develop NEW public education material about proper use of cartridge AND how to obtain filter replacement cartridges, targeted for release week of October 26 during lead awareness week.	Jen Eisner will work with Hilda McShane	<b>Estimated completion date: 10-26-15</b>
	Video created with Home Depot demonstrating replacement of the Brita replacement filter.	The video will be posted on the gov/flintwater website.	<b>Pending</b>
<b>Lead Testing Protocol:</b>	Draft protocol has been completed, undergoing final review. Protocol calls for testing: Priority groups- <ul style="list-style-type: none"> <li>Confirmatory venous testing for children who had venous testing (115 children)</li> </ul>	Protocol being cleared with Governor's Office.	<b>Pending</b>

TASK	STATUS	ACTION	DATE COMPLETED
	<ul style="list-style-type: none"> <li>Children in day care, Head Start</li> <li>children attending 3 schools (Freeman, Eisenhower, Brownell)</li> <li>Children residing in high risk zip codes (03, 04)</li> <li>All other students</li> </ul> <p><b><u>Protocol will be announced in a joint MDHHS/GCHD Press release.</u></b></p>		
<b>Lead Testing: 9/28/15-10/23/15</b>	<p>CLPPP processed 580 tests from Flint zipcodes since 9-28-15; 5 children were reported with elevated lead blood levels.</p> <p><b><u>There are currently 147 children that have been identified for follow-up.</u></b></p>	<b><u>MDHHS has arranged a contract with the GCHD to provide nurses for the follow-up.</u></b>	<b><u>Contract in Egrams as of 10-23-15</u></b>
	<p>Cross reference list of children with elevated lead levels with filter distribution data to ensure household has a filter. (Peeler/Scott) <u>So far only about 20% of the 147 children with EBL are known to have received a filter. GCHD will deliver filters to these homes as they are doing the case follow-up. GCHD will provide weekly updates.</u></p>	Send list to Kris S	<b>Pending</b>
	<p>Would like to obtain the student list from the three schools and cross reference with our lead testing data to determine children tested/not tested</p> <p><b><u>A group will develop reporting metrics and system to track same: Linda Dykema, Wes Priem, Michele Bruneau, Linda Scott, Bob Scott</u></b></p> <p><u>Linda is working on an analysis of blood lead tests done since 9-28-15. Epi will assist with this analysis. It was suggested that it would be helpful to have a non-government epidemiologist review the data before it is released.</u></p>	Hertel to contact MDE	<b>Estimated completion date: 10-26-15</b>
<b>Parent education</b>	<p><b><u>Parent education material completed.</u></b></p> <p>Discuss dissemination of parent material through Flint schools.</p>	Call with Flint school superintendent, GCHD, and MDHHS scheduled 10-26-15 to discuss dissemination process.	<b>Pending</b>
	<p>Schools require 6000+ information packets for distribution to all students. Print order sent to DTMB.</p> <p><b><u>Hardcopy will be distributed to GCHD for issuing to the schools, and to Headstart, daycare, and other agencies in Flint with children ages 0-5.</u></b></p>	Geralyn Lasher arranged for printing.	<p><b><u>Done</u></b></p> <p><b><u>Expect hardcopy delivery by 11-2-15.</u></b></p>

## **MDHHS – Genesee County Health Department**

### **3PM Conference Call Notes, October 13, 2015**

**Attendees:** Sue Moran, Mikelle Robinson, Eden Wells, Mark Miller, Mark Valacak (Health Officer), Elizabeth Hertel, GERALYN Lasher, Sheryl Thompson, Kris Schoenow, and Jon Gonzalez

#### **GCHD Update:**

##### **Central Point of Communication/Coordination**

- The United Way held a meeting with community partners today and the GCHD announced it would be acting as the communication hub.
- GCHD is working with the United Way to create a dissemination list for updates.
- The School Board President has been joining the meetings at the United Way and discussions with contacts at private and charter schools are occurring to supply them with filters.
- GCHD advised that they will proceed with a daily briefing at 4:00PM.

##### **Filter Tracking System**

- GCHD and Kris Schoenow (MDHHS) are working to expand the cloud-based database to include all needed information so that one database can be used to track filter distribution.
- It is important that the database track the types of filters provided since replacement filters need to be distributed to these families in a couple of months.
- The database will be used to cross reference the list of kids with elevated blood levels to ensure these households receive filters.

#### **MDHHS Update:**

##### **Protocol for Identifying and Prioritizing Children that Require Testing and Case Management**

- 151 children from all Flint zip codes have been identified with previous blood lead levels of 5 or over since April, 2014.
- 85% of the children are Hurley patients. 92% of the children receive Medicaid.
- 75 of the children need venous draws; 76 need venous retesting.
- Eden Wells, Rashmi Travis, Nancy Peeler, Toni LaRocco (GCHD) and Dr. Gary Johnson (GCHD) will work together to develop the testing and case management protocols.

- Possible completion date of protocol by October 14<sup>th</sup>.
- U of M Flint, and McLaren Health are interested in assisting with capillary lead testing. Public health students can also assist as needed.
- Training may be needed on the protocols and data reporting.
- There was discussion about parental requests to test older children. The risk based protocol will be customized given the situation.
- The environmental assessment protocol is currently available on the MDHHS website.

### **Funding**

- Still awaiting approval of the supplemental funding request.

### **Communication**

- There was discussion about communication/engagement with providers.
- Geralyn is working on a list of providers and partners list.
- She will work with Hilda on the dissemination of information to the appropriate groups and the community.
- The new lead toolkit has been completed and was sent to Mark today via links.
- An FAQ document has been created and is awaiting approval. An infographic also is in development.
  - Once approved, both the infographic and FAQ will be sent to Mark and posted to the site.

### **NEXT STEPS/ACTION ITEMS**

- Completion of the testing and case management protocol
- Continue daily state-local update calls
- Send FAQ to Mark Valacak once it has been approved by MDHHS Communications
- Completion of changes to the filter distribution database.

**Sent:** Tuesday, October 20, 2015 5:28 PM  
**To:** Miller, Mark (DHHS); Dykema, Linda D. (DHHS); Priem, Wesley F. (DHHS); Moran, Susan (DHHS); Wells, Eden (DHHS)  
**Cc:** Robinson, Mikelle (DHHS); Travis, Rashmi (DHHS); Fink, Brenda (DHHS)  
**Subject:** RE: Lead Issue in Flint - TEST RESULTS ARE IN  
**Importance:** High

Good afternoon -- we have received test results from the lab for the family whose situation we discussed at 8:30am. Both parents and all 4 children have levels < 3 based on venous testing (basically, < 3 means below the detectable limit). Good news for all!

Nancy

**To:** Miller, Mark (DHHS); Dykema, Linda D. (DHHS); Priem, Wesley F. (DHHS); Peeler, Nancy (DHHS); Moran, Susan (DHHS); Wells, Eden (DHHS)  
**Subject:** Lead Issue in Flint  
**When:** Tuesday, October 20, 2015 8:30 AM-9:00 AM (UTC-05:00) Eastern Time (US & Canada).  
**Where:** Conference Call

Can we have a conference call on Tuesday, Oct. 20<sup>th</sup>, from 8:30 to 9:00 AM, to discuss the below situation in Flint?

For folks in CV, you can come up to my office on the 6<sup>th</sup> floor if you'd like.....

**PPI**

XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

From Linda Dykema:

I just spoke with the dog's owner and have his contact information.

They live in 48503 and they are on Flint water.

They have a 2-year old male dog who lost a lot of weight in a short period of time and they sought vet care. The dog's blood tested at a level of 409...not sure of the units, but the owner read from a vet report that said anything over 350 was considered lead toxicosis. They also have a 4-year old female dog who previously had 2 successful litters, but who delivered a single still born pup this morning (they would like the pup tested/autopsied but cannot afford the cost).

The adult female in the house is pregnant (1<sup>st</sup> trimester) and there are children <6 years living there as well. Father says he called GCHD a week and a half ago and was told to 1) see their family Dr., and 2) GCHD would call them back. To date no call back. All family members had venous draw today for lead testing. Dr. has told them to not use the water for bathing.

They received a filter from city of Flint. They sent a filtered water sample to a lab somewhere (man wasn't sure where) and the results indicate the filter doesn't work (man did not recall the lead level found).

Linda

**From:** Moran, Susan (DHHS)

**To:** Stobierski, Mary Grace (DHHS); Miller, Corinne (DHHS); Moran, Susan (DHHS); Miller, Mark (DHHS)  
**Cc:** Wells, Eden (DHHS); Dykema, Linda D. (DHHS)  
**Subject:** Call-Lead Toxicity in a Dog

MDHHS has been notified this afternoon of a family from the Flint area whose dog was diagnosed with lead toxicity. I received a voice message from Dr. Michele Schalow with MDARD about this case, and Eden Wells was contacted by Linda Dykema, who was also informed of this case. At this time, I don't have any information about the dog or why it was tested, but information is that the testing was performed at MSU's Diagnostic Center for Population and Animal Health. Eden is getting ready to board a plane, so asked me to notify everyone. The family of the dog includes children and a pregnant woman. Her thought is that the family needs to be tested asap. Kim

**Population Health and Community Services Administration  
Flint Water 10-27-15 Briefing Summary**

**Daily Briefing**

PPI

Access Code: PPI

**Attendees:** Sue Moran, Mikelle Robinson, Eden Wells, Geralyn Lasher, Mark Miller, Linda Dykema, Nancy Peeler, Wes Priem, Linda Scott, Bob Scott, Corinne Miller, and Jon Gonzalez

**Daily Activity Summary**

**Filter/Water Distribution**

- Currently coordinating with GCCARD to determine timing of public announcement when the replacement filters will be available. It is anticipated that a public announcement will occur next week.

**Lead Testing Protocol: Provider/Parent Education**

- Waiting on a quote from Dr. Gary Johnson (GCHD) to include in press release.
- Waiting on branding efforts (combining MDHHS and GCHD letterhead) on the materials, as well.
- Both provider/parent education materials will be announced in the same press release.
- All materials would be sent to the GCHD for dissemination into the community, with the schools distributing the bulk of the parent materials.
- The provider material will disseminated electronically.
- A second-tier notification list was discussed. It could include: 211, Home Visitors, MDE Office of Great Start, Early Childhood Investment Corporation, DLARA Childcare Licensing, and State-level partners.
- Elizabeth Hertel will notify three (3) Flint-area legislators once the materials are disseminated.
- Planning meeting Thursday 10/29 with Rep Neely, school superintendent, and GCHD for community event on November 12. Focus is on children 0-5.

**Print/Copying Costs**

- It will cost \$10,000 to print 12,000 copies of the materials.

**Lead Testing Results**

- Need to develop common set of metrics for aggregate tracking and reporting information.
  - A sub-group will develop a model reporting format: Linda Dykema, Wes Priem, Michelle Bruno, Linda Scott, and Bob Scott.

**EBL Investigations**

- Results from water testing at Freeman Elementary School indicated that there are potentially easy fixes to bring the school into compliance with whatever threshold value is ultimately selected. This is the first of three (3) schools to have its water tested.

- Wes Priem advised that the contract with ETC is pending a discussion with MDHHS Budget. ETC is has been advised that there will be a maximum of 250 sites to visit.
- Since 60-70% of all properties in Flint are rentals, there is some concern about not getting compliance from landlords to complete onsite visits. Wes Priem may have to coordinate efforts with Flint housing and/or the Genesee County Prosecutor.

#### **Nurse Capacity**

- GCHD advised that they currently have a nurse acting as coordinator.
- 1.5 FTE has been identified and will be trained 11-10-15.

#### **Funding**

- The EBL Investigation contract with ETC is pending a discussion with MDHHS Budget.

#### **Misc.**

- Michigan members of the US Congress issued a letter to get the USDA to clarify the use of Ready to Feed formula.
- The Flint Lead Innovation Team, a group comprised of members from Hurley, Michigan State University, and others, mentioned in the press. Two prominent members quoted have been Dr. Dean Sienko (MSU) and Dr. Mona Hanna-Attisha (Hurley).
- We'll continue briefings twice per week after this week in short term.

---

**From:** Moran, Susan (DHHS)

**To:** Grijalva, Nancy (DHHS); Lyon, Nick (DHHS)  
**Subject:** FW: 3 pm 10-27-15\_Daily Activity Summary  
**Attachments:** 3 pm 10-27-15\_Daily Activity Summary.docx

These are notes from our 3PM call with Genesee County Health Dept.

Would you like to receive two separate documents or a summary document that highlights activities from our internal call and call with GCHD? Both internal team summary and the GCHD call summary documents are sent to Geralyn and Elizabeth. What would best meet your needs?

My plan is to update the action plan on Friday, at the end of the week, but we can do that on a daily basis as well.

---

**From:** Miller, Mark (DHHS)  
**Sent:** Tuesday, October 27, 2015 5:20 PM  
**To:** Moran, Susan (DHHS); Robinson, Mikelle (DHHS)  
**Subject:** 3 pm 10-27-15\_Daily Activity Summary

Notes from 3 PM call.

**Population Health and Community Services Administration  
Genesee County Health Department - Flint Water Bi-Weekly Briefing Summary**

**Daily Briefing**

Access Code:

**Attendees:** Sue Moran, Mikelle Robinson, Mark Miller, Bob Scott, Sheryl Thompson, Mark Valacak, Geralyn Lasher, Toni LaRocco, and Jon Gonzalez

**Daily Activity Summary**

**Filter/Water Distribution**

- GCHD intends on starting filter replacement distribution efforts next week; however, they currently leave a replacement when the first filter is initially installed.
- GCHD wants clients to bring in the old filters when they get a replacement to make sure the correct replacement product is issued (Brita vs. Pur).

**Lead Testing Protocol**

- GCHD has received the list of 147 clients identified as having elevated blood lead levels for follow-up.
- Only ~20% of the 147 individuals for follow-up are known to have received a water filter through the GCHD.
- GCHD currently does not have the list to show which of the 147 individuals that are known to have received a filter; however, they will provide weekly updates on the progress of increasing that percentage once they receive the list.

**Lead Testing Protocol (Parents)**

- The schools have agreed to distribute the materials to parents.
- Once the materials are delivered to Toni LaRocco, the GCHD will take lead on distribution.

**Community Events**

- An event with Molina is still being organized.
- A telephonic town hall event will be held on 28 October and hosted by US Rep. Dan Kildee.
- Another town hall is scheduled for 2 November and will be hosted by State Rep. Sheldon Neeley. Details are limited at present; however, it is believed the event will occur at the Bethel United Methodist Church.
- On 12 November, there will be an event at Brownell and Holmes Schools in the northwest portion of town.

**Contract**

- The contract with GCHD was entered into EGRAMS on Friday and the Genesee Board of Commissioners approved it during a special meeting on 26 October.
- Mark Miller is working on payment options with MDHHS Contracts.

#### **Misc.**

- Valacak advised that the number of public inquiries about water in Flint has decreased recently.
- Students attending schools of choice (a school outside of their school district) are a concern. Grand Blanc contacted GCHD to discuss filters for students residing in Flint.
- The United Way is looking to get ~8 Americorps volunteers to assist with community outreach activities, enrolling clients into WIC, and adding capacity to Wes Priem's operations.

#### **Nurse Capacity**

- GCHD advised that 2.5 FTE nurses will be trained and available on 10 November. The hiring and training dates for the last 1.0 FTE are to be determined.

#### **Funding**

- The EBL Investigation contract with ETC is pending a discussion with MDHHS Budget.

#### **Misc.**

- The Flint Lead Innovation Team, a group comprised of members from Hurley, Michigan State University, and others, has started gaining attention in the press. Two prominent members quoted have been Dr. Dean Sienko (MSU) and Dr. Mona Hanna-Attisha (Hurley).
- We'll plan on call briefings to occur twice per week after this week.
- Per the GCHD, education and testing at Brownell/Holmes Schools, from 3-7PM on November 12 for children ages 0-5. This event is in addition to the event at Burton (GCHD) on November 5.

---

**From:** Moran, Susan (DHHS)  
**Sent:** Friday, December 11, 2015 10:33 AM  
**To:** Lyon, Nick (DHHS)  
**Cc:** Grijalva, Nancy (DHHS)  
**Subject:** Talking Points for Monday

- Dr Mona H-A concerned about/focused on ensuring there is a system to in place to support long range follow up of Flint area children. The system needs to include tracking, enhanced services ( such as referral to Early On for young children) , coordination of enhanced services, provider awareness, etc.
- MSU Flint, College of Human Medicine, MSU College of Human Medicine and MSU Ext resources supporting Mona's work by providing scientific and technical resources, nutritional recommendations and cooking demonstrations, brainstorming how to address long- term planning, etc. Dr Wells has been a part of a few of these meetings as well. MDHHS has reviewed and is reviewing the educational resources being developed by Mona's group and MSU Extension.
- MDHHS working with Hurley/Dr Mona H-A to execute data use agreement that would allow MDHHS to exchange lead screening data with Hurley. Data will be used for GIS mapping and identification of case clusters etc. This will enhance efforts to accelerate testing/case management of at risk families, it also provides data that can be used for long range follow up of children.
- MDHHS scheduled to meet MDE in early January to discuss coordination between health system and educational system in support of long range follow up.

**To:** Lyon, Nick (DHHS)  
**Cc:** Grijalva, Nancy (DHHS)  
**Subject:** Readable FOIA response  
**Attachments:** FW: State data confirms higher blood-lead levels in Flint kids

Attached is the only e-mail you need to review. The 2 unreadable documents had this same e-mail in it 3 times, which is why those documents were so long. Those duplicative, unreadable documents have now been removed and replaced by the attached. While the end does still get narrow, it's now readable.

We thought this it was common sense that the FOIA documents that go out should be readable, but to ensure this doesn't happen again, we have added our FOIA processing manual to now read:

"Review the documents received from the program area. If the documents are not readable or are not properly formatted, contact the program area and require the program area to send readable or properly formatted documents."

Thanks for alerting us and sorry about that.

Dear Brenda,

After seeing Gongwer on Friday AM, I contacted Corinne to understand what was going on, Linda Dykema and Angela later pulled in Epidemiology. I come out of environmental health (cut my teeth on superfund site in a politically complex area) and can appreciate sensitivity on multiple fronts, as well as appreciating the analyses of data at the local level (well done).

It would benefit all of us for epidemiology staff to be pulled in as quickly as possible in the future, so that Patti and I can assist Cristin, that we can weigh in on design issues, and we can make sure that we are not at cross purposes when Angela requests a response. Cristin's response will take some time.

Cristin and I discussed an approach on Friday before we received the report from Angela with the updated counts. We will take a look this AM and revise our approach.

Obviously this is uber high profile---so we just need to be sure we're about the data, which as you and Sarah likely know, is under a lot of scrutiny because some of the local folks have different data (done differently, lots of issues----just this involves people who care deeply about the community, Larry Reynolds who is now on our iM Exec Team, etc) I'm just saying sensitivity to the local people who are so concerned about the babies there based on what they have for data is a context that is important, beyond the high profile and other issues. My comment has nothing to do with the data itself. Just the context of very concerned people. Doesn't impact our data . . . obviously. It's just there's a people side to this issue that sometimes gets lost when something becomes so politicized. Just for us, I guess.

## GONGWER:

### Virginia Tech Researcher Claims Stonewalling On Lead Data

The Department of Health and Human Services had data that showed there were elevated lead levels in Flint's water, but delayed in releasing that data to others for review, Virginia Tech professor Marc Edwards said in an article posted to his website documenting the city's water crisis.

Department officials agreed and said the experience led to changes in how they examine data.

Mr. Edwards said the department had data from shortly after Flint changed its water source that showed a spike in blood lead levels in children in two at-risk neighborhoods, but did not disclose that data until September 2015. "They discovered scientifically conclusive evidence of an anomalous increase in childhood lead poisoning in summer 2014 immediately after the switch in water sources, but stood by silently as Michigan Department of Environmental Quality (MDEQ) officials repeatedly and falsely stated that no spike in blood lead levels (BLL) of children had occurred," he said in the [post](#).

DHHS spokesperson Jennifer Eisner agreed the department had data that showed the spike, but said its analysis at the time overlooked factors that, in retrospect, would have shown there was a water quality problem. "When initially looking at the citywide and county elevated blood lead level numbers, the increase appeared to be consistent with the seasonal fluctuation seen in the summer months," Ms. Eisner said. "It wasn't until the Hurley report came out that our epidemiologists took a more in-depth look at the data by ZIP code, controlling for seasonal variation, and confirmed an increase outside of normal trends. As a result of this process, we have determined that the way we analyze data collected needs to be thoroughly reviewed."

Mr. Edwards said DHHS officials also stonewalled him on getting access to that data. He said data he had gotten easily in 2006 documents for a similar review took several weeks to receive after his request sent September 2. When he did finally receive the data, he said it was a version that omitted the lead level spike from summer 2014 that the department had created in July. He said a series of emails he received under a recent Freedom of Information Act request showed an intention by DHHS officials to keep the reports from the public. "Our FOIA reveals a shocking DHHS graph created in October 2015. It shows the statistically significant spike in blood lead that occurred in summer 2014 - the scientific result that DHHS has never publicly acknowledged," Mr. Edwards said in his post.

Ms. Eisner said the department has worked to make the data available. "Summary reports outlining blood lead level testing are posted online on a bi-weekly basis, and we work closely with local partners to fulfill data requests as we receive them," she said.

### Feds Praise State's Child Welfare Progress

The federal government complimented the changes made to the state's child welfare services, saying it is leading to more vulnerable children finding safe and permanent homes, according the Department of Health and Human

Services. U.S. Administration for Children and Families Commissioner Rafael Lopez recognized a variety of changes made to the child welfare system, a statement from DHHS said. The state's Children's Services Agency oversees protective services, foster care, adoption and juvenile justice systems. "The successful completion of this program improvement plan is a milestone for both Michigan and ACF," Mr. Lopez wrote. "It represents dedication and commitment from staff at every level."

The federal government told the state in 2009 it was not in compliance with federal guidelines, and the state has been working on improving its child welfare system since then. The statement said when Governor Rick Snyder took office in 2011, he made improving the state's child welfare system one of his top goals, and now the state has succeeded in meeting the federal goals, leading to potential federal penalties of at least \$2.8 million being rescinded. "I am proud of the progress that Michigan has made in taking care of children who have been abused and neglected," Mr. Snyder said. "It is gratifying to know that the U.S. Administration for Children and Families has recognized the reforms we have implemented. We have more work to do, but there is no doubt that Michigan's vulnerable children receive better services today than they did five years ago."

The letter demonstrates that Michigan is succeeding in providing coordinated services to vulnerable children and families, said DHHS Director Nick Lyon. "We want kids in the state's child welfare system to safely return to their homes or find a loving, permanent home through adoption if it's determined it is not safe for them to be reunited with their parents," he said. "There are about 13,000 children in Michigan's foster care system at any given time who have been removed from their homes due to abuse or neglect."

**MIRS:**

## **Lyon: Achieving Vision For DHHS Merger Could Need Federal Changes**

Nearly a year after the massive merger of the state's health and human services departments, its leader said some state and local silos have fallen as a result, but more need to follow -- including at the federal level.

The creation of the Michigan Department of Health and Human Services (DHHS) was the big administrative story earlier this year after Gov. Rick SNYDER announced he wanted to merge the two biggest state departments into one gigantic one (See "Snyder Pens Order Creating New Department of Health & Human Services," 2/6/15).

DHHS Director Nick **LYON**, in a year-end interview with *MIRS*, said the merger has bore fruit already, including the state better serving people whose needs overlap the two halves of DHHS.

For instance, when it comes to foster care children, the state is working to make sure kids who are removed from their homes -- a human services function -- get hooked up with a behavioral health provider and a primary care physician.

"There is no doubt that a child removed is going to suffer some sort of trauma from that event," Lyon said. "And we need to treat them as quickly as possible."

Another area Lyon is looking at is making eligibility seamless for Medicaid recipients who need food assistance.

And while Lyon said field offices across the state have gotten a better handle on the various programs offered through DHHS, he said the state still faces a "silo system" when it comes to local public health departments and community mental health agencies, although he said there's been some communication improvements there.

The goal of creating DHHS in the first place -- according to Snyder, Lyon and other state officials -- was to move to a system built around treating the "whole person" rather than just categorizing clients into various assistance programs.

One roadblock to this: The federal government hasn't necessarily adopted the same model, and the DHHS has to deal with a lot of federal programs in different places.

"We're still dealing with siloed federal programs, so the question is, do we build a program that deals with the siloed programs, or do we try to break down those silos at the federal level? And we're going to attack it in both places," Lyon said.

Asked if it was realistic to accomplish the DHHS vision by changing how the federal government works, Lyon replied quickly, "Completely realistic."

"We have an obligation - if we see something that can be improved, regardless of where that issue may be, I think . . . states have the obligation to stand up and try to do something," he said.

Lyon said the federal government has "embraced" the ideas presented by the DHHS.

"I am certainly encouraged by how my federal partners have reacted to much of what we're trying to do," he said.

Snyder and the administration have previously mentioned applying for various waivers to cut through federal programming. Lyon said DHHS has been able to get around this through conversations with the feds.

"We've been able to work with the federal government to ask for things without a waiver," he said.

This give-and-take between the state and the federal government was apparent recently when the feds granted approval to a waiver for the Healthy Michigan Plan, which allows Michigan's customized Medicaid expansion program to continue (See "[Feds, State Reach Compromise To Keep Healthy Michigan In Place](#)," 12/17/15).

The final approval appeared to mark a compromise between what is called for in state law regarding the Healthy Michigan Plan, and what the feds wanted preserved in their vision for Medicaid expansion.

*State Testing In Flint To Continue:* The DHHS role in the state's response to the Flint water crisis has involved testing of children and adults for lead, which became a problem after the city switched its water supply to the Flint River for more than a year.

Lyon touched on the Flint issue briefly, saying the state would continue testing (See "[Bits And Tidbits](#)," 12/11/15).

He said the next priority for the DHHS is "following up and ensuring that children who have elevated blood lead levels, that we are doing everything we can to reduce those blood lead levels."

## **Feds: State Meeting Marks On Child Welfare Improvements**

A federal report released today found that Michigan has met goals set for improving the state's child welfare system.

However, the report won't have any bearing on the ongoing negotiations between the state and an advocacy organization to lift different court-ordered requirements on Michigan's child welfare system.

Today, the Michigan Department of Health and Human Services (DHHS) received a letter from the feds saying the state has achieved all the goals in a federally implemented "program improvement plan."

The state has been working with the U.S. Administration for Children and Families (ACF) since 2009, when federal officials said the state was not in compliance, according to a press release.

Now, the feds say vulnerable children are safer and are finding permanent homes more quickly.

"The successful completion of this program improvement plan is a milestone for both Michigan and ACF," said Rafeal **LOPEZ**, commissioner of the ACF. "It represents dedication and commitment from staff at every level."

In 2008, the state first reached a settlement with the advocacy group Children's Rights, which brought a class action suit against the state regarding its child welfare system.

As a result of the settlement, the DHHS has had to meet a number of objectives through periodic reports delivered to a federal court (See "[Michigan Score On Child Welfare Report Tied to Computer Problems](#)," 4/13/15).

Earlier this year, the state embarked on renegotiating the terms with Children's Rights (See "[State, Advocates To Renegotiate Child Welfare Oversight](#)," 2/20/15).

Those negotiations are still ongoing, and DHHS Director Nick **LYON** described the talks as going "quite well" in a recent interview (See related story).

With the release of this report noting the state's improvements in child welfare, Children's Rights spokesperson Wende Gozan **BROWN** said it wouldn't have any bearing on the negotiations. She said the program improvement plan required by the feds is different.

The state said much of the same, saying the benchmarks met in the ACF plan "do not directly affect" the court oversight.

Asked if this report could gain the state any leverage in its negotiations with Children's Rights, the state said no, because the two issues aren't tied together.

As a result of the ACF letter today, the state is off the hook for at least \$2.8 million in potential federal penalties, which have been rescinded.

### **Michigan meets, exceeds federal goals for child welfare system**

*"LANSING, Mich. – Vulnerable Michigan children are safer and are finding permanent homes more quickly through improvements to the state's child welfare system, according to the U.S. Administration for Children and Families (ACF). "*

**Subject:** February 2014 Blood Lead Testing Report  
**Attachments:** 201402.pdf; February 2013 - February 2014 - PPC.pdf

Attached you will find the February 2014 Medicaid Blood Lead Testing report.

This report is produced on a monthly basis. The purpose of the Blood Lead Testing Report is to provide information on blood lead testing in the Medicaid population.

Effective October, 2010, Medicaid Health Plans were contractually required to ensure that at least eighty (80) percent of continuously enrolled two (2) year old children have had at least one (1) blood lead test on/or before their second birthday.

Effective August 1, 2012, McLaren Health Plan assumed CareSource Michigan's Medicaid operations in Michigan.

For February 2014:

- 5 out of 13 met the continuous enrollment requirement.

An additional report, **February 2013 – February 2014 - PPC.pdf**, demonstrates the progress that each health plan has made on "two year olds" blood lead tested over the past 12 months.

Please feel free to contact Qian (Daisy) Peng at 517-241-1388 or [QianPeng@Michigan.gov](mailto:QianPeng@Michigan.gov) if you have any questions or concerns regarding these reports.

Thank you.

## ***MEDICAID BLOOD LEAD TESTING***

February 2014

Produced by Data Management & Security Section  
Office of Medicaid Health Information Technology  
Cynthia Green-Edwards, Director

## **Blood Lead Testing Methodology**

- **Children must have been eligible for one of the following programs in February 2014**
  - Medicaid Managed Care (MC)
    - enrolled in a Medicaid Health Plan (MHP)
  - Medicaid Fee-for-Service (FFS)
    - enrolled for Medicaid Only FFS coverage
  - Medicaid and CSHCS Dual Eligible (Duals)
    - dually eligible for both Medicaid and CSHCS
- **Blood Lead testing results include children tested:**
  - on or before indicated birthday for 2 and 3 year olds
  - at any time between ages 1 to 6
- **Unique Client Identifier (UCI) used to establish link between Medicaid and lead databases.**

**Questions should be directed to Qian Peng at (517) 241-1388, or [pengq@michigan.gov](mailto:pengq@michigan.gov)**

## **Blood Lead Testing Summary**

- **2 year old children tested on or before their 2nd birthday**

- 69% Statewide
- 69% City of Detroit
- 71% Statewide for Medicaid MC
  - 77% Statewide for Medicaid MC with 12-Month Continuous Enrollment
- 61% Statewide for Medicaid Only FFS Eligibles
- 59% Statewide for CSHCS Duals

- **3 year old children tested on or before their 3rd birthday**

- 77% Statewide
- 81% City of Detroit
- 78% Statewide for Medicaid MC
  - 84% Statewide for Medicaid MC with 12-Month Continuous Enrollment
- 68% Statewide for Medicaid Only FFS Eligibles
- 65% Statewide for CSHCS Duals

### Children Receiving at Least One Blood Lead Test on or before Second Birthday by Program Eligibility

### Managed Care Enrolled Children Receiving at Least One Lead Test on or before Second Birthday

#### Total Enrollment

- Enrolled in measurement month

#### Continuous Enrollment

- Based on MMIS eligibility system

- Enrolled in same health plan for the measurement month and 12 months preceding 2nd birthday, with a 1-month allowable gap.

**Subject:** RE: Fitton's presentation pages 27 amd 28  
**Attachments:** 2013 CLPPP Data Report PRELIM.pdf

Not exactly---the report included the usual tables by counties, # and % tested, # and % with elevated BLL (see attached).

**Subject:** RE: Fitton's presentation pages 27 amd 28

And we listed the counties with 'highest' proportions of children with lead levels >5?

One of my first concerns is with Medicaid using our product without talking with us first. I'm sure we can make a list of 'concerns'. In fact, that's probably the best thing to do now -- what concerns/issue do we see with all of this? Will help us to know what steps to take to address it all, and how to prioritize. Thanks for setting up the appointment for tomorrow, we'll be able to make good use of that time!

**Subject:** RE: Fitton's presentation pages 27 amd 28

Not sure how they got it, but possibly Matt Davis. I originally sent this preliminary report to the MIALSH mailing list (because I'm slow this year getting the final annual report out). Dr. Davis is on that list, but it's a pretty long list of folks inside and outside of state govt.

Yes, seems like we will definitely need to talk through all of this. For now, please stop sending anything out, not to Mary Sue, not to Jean, not to anyone. Just put it on hold until we can sort through this and get a better sense of what is going on. No need to respond to a LSB request until we have one.

So you produced the chart on page 28? And how did Medicaid get it?

**Subject:** FW: Fitton's presentation pages 27 amd 28

Last one! I talked with Jean Doss on the phone, trying to explain the difference between Mr. Fitton's 82.4% tested and the much lower %s in my annual reports. She sent me this to show where her questions, and Mr. Lindstrom's quotes,

were coming from. Page 27 must have come from Medicaid staff. Page 28 came straight out of a "preliminary" data report I sent to MIALSH members and Prevention grantees. I suppose that's something else we need to talk about.

**Subject:** RE: Blood Lead Nursing Assessment

Hi Nancy –

I hope all is well. I would like to re-open this discussion of nursing assessment visits. In 2012 we spoke about the need to increase these in-home visits and I wanted to see if you or someone from your section could provide me with additional information or justification for why the limit of 2 visits is an unrealistic expectation and should be increased?

Thanks in advance,

-Brad

Thanks, Brad, good to know where to find this information. Yes. I think we can think about justification for changing what is currently offered, and how best to move forward in the future.

I found this today within the Practitioner chapter of the Medicaid Provider manual:

**Nursing Assessment/ Investigation Visits**

MDCH covers up to two nursing assessment/investigation visits per episode of blood lead poisoning. If more than one child in the home has blood lead poisoning, the nursing assessment/investigation visits are covered for each child. Blood lead nursing visits must be provided in the child's home. For FFS beneficiaries, an enrolled home health agency, a LHD or other medical clinic, or a physician may conduct the visits. This procedure is not covered for Maternal Infant Health Program (MIHP) providers. Blood lead nursing visits provided through a MHP are covered by the individual MHP.

The first nursing assessment/investigation visit focuses on:

- Assessment of the growth and developmental status of the child, including any symptomatology that may be present in the child.
- Behavioral assessment of the child, including any aggressiveness and/or hyperactivity.
- Nutritional assessment of the child.
- Assessment of typical family practices that may produce lead risk (e.g., hobbies, occupation, cultural practices).
- Limited physical identification of lead hazards within the dwelling.
- Identification and planning for testing for any other family member at risk for sequelae of lead hazard exposure.
- Education and information regarding lead hazards and ways to minimize those risks in the future.
- Development of a family plan of care to increase the safety of the child from lead hazards.

The second blood lead nursing visit focuses on:

- Reinforcement of the educational information presented to the family during the first visit.
- Validation of the family's ability to carry out activities to minimize risks of continued lead exposure.
- Modifications of the plan to minimize lead risks, as needed.

So, it is correct that a limit of 2 visits has been established. Would you be able to provide additional information or justification for why the limit of 2 visits is an unrealistic expectation? I know I have heard these complaints from Health Departments before. I have not looked in to the federal regulations related to this yet.

OK, help! Seems like maybe a door is open, but I'm not sure that's really the case.

1. Strategy – should we even try to argue for more nursing visits via this route (e.g. as 'nursing assessment visits'). I know we really want case management visits, which we have learned from you is NOT the same thing.
2. Documentation – if we respond, what would you suggest we provide?

Thanks for your help with thinking through this! I did let him know that we will put something together and asked him if there is a timeline for responding...will let you know what he says.

# MDCH CLPPP LOGIC MODEL for FY 2014

## Community Rx for Children with Elevated Blood Lead Levels 5 to 14 µg/dL

Your child's name \_\_\_\_\_

Date \_\_\_\_\_

Your child's level is \_\_\_\_\_

Your child has been diagnosed with an elevated blood lead level. The most common source of lead poisoning is lead paint and lead dust in older homes. Lead is most harmful to children younger than 6 years old. The results can be lower IQ, learning problems, and behavior problems.

### Follow-Up Instructions:

- ☐ Test your child again within three months. Call \_\_\_\_\_ for an appointment.
- ☐ Make sure all children in your home get a blood test for lead.
- ☐ Be sure to keep your child's next appointment for a checkup.
- ☐ Make sure your child is getting the healthy foods that your doctor suggests. [INSERT LOCAL WIC CONTACT INFO]
- ☐ Contact your county health department to learn about cleaning up lead. [INSERT HEALTH DEPT LEAD CONTACT]
- ☐ Have your home inspected for sources of lead by a certified inspector. [INSERT LOCAL INSPECTORS]  
[INSERT HEALTH DEPT INFO IF PPLICABLE]

### Learn more about lead, how to keep your child safe, and who can help.

Call:

[INSERT HEALTH DEPT LEAD CONTACT]

**Attachments:** 201404.pdf; APR 2013 - APR 2014 - PPC.pdf

Attached you will find the April 2014 Medicaid Blood Lead Testing report.

This report is produced on a monthly basis. The purpose of the Blood Lead Testing Report is to provide information on blood lead testing in the Medicaid population.

Effective October, 2010, Medicaid Health Plans were contractually required to ensure that at least eighty (80) percent of continuously enrolled two (2) year old children have had at least one (1) blood lead test on/or before their second birthday.

Effective August 1, 2012, McLaren Health Plan assumed CareSource Michigan's Medicaid operations in Michigan.

For April 2014:

- 6 out of 13 met the continuous enrollment requirement.

An additional report, **APR 2013 – APR 2014 - PPC.pdf**, demonstrates the progress that each health plan has made on "two year olds" blood lead tested over the past 12 months.

Please feel free to contact Qian (Daisy) Peng at 517-241-1388 or [PengQ@Michigan.gov](mailto:PengQ@Michigan.gov) if you have any questions or concerns regarding these reports.

Thank you.

Medical Services Administration  
Office of Medicaid Health Information Technology

## ***MEDICAID BLOOD LEAD TESTING***

April 2014

Produced by Data Management & Security Section  
Office of Medicaid Health Information Technology  
Cynthia Green-Edwards, Director

## **Blood Lead Testing Methodology**

- **Children must have been eligible for one of the following programs in April 2014**
  - Medicaid Managed Care (MC)
    - enrolled in a Medicaid Health Plan (MHP)
  - Medicaid Fee-for-Service (FFS)
    - enrolled for Medicaid Only FFS coverage
  - Medicaid and CSHCS Dual Eligible (Duals)
    - dually eligible for both Medicaid and CSHCS
- **Blood Lead testing results include children tested:**
  - on or before indicated birthday for 2 and 3 year olds
  - at any time between ages 1 to 6
- **Unique Client Identifier (UCI) used to establish link between Medicaid and lead databases.**

**Questions should be directed to Qian Peng at (517) 241-1388, or [pengq@michigan.gov](mailto:pengq@michigan.gov)**

## **Blood Lead Testing Summary**

- **2 year old children tested on or before their 2nd birthday**

- 69% Statewide
- 69% City of Detroit
- 71% Statewide for Medicaid MC
  - 77% Statewide for Medicaid MC with 12-Month Continuous Enrollment
- 61% Statewide for Medicaid Only FFS Eligibles
- 59% Statewide for CSHCS Duals

- **3 year old children tested on or before their 3rd birthday**

- 77% Statewide
- 81% City of Detroit
- 78% Statewide for Medicaid MC
  - 84% Statewide for Medicaid MC with 12-Month Continuous Enrollment
- 69% Statewide for Medicaid Only FFS Eligibles
- 68% Statewide for CSHCS Duals

### Children Receiving at Least One Blood Lead Test on or before Second Birthday by Program Eligibility

### Managed Care Enrolled Children Receiving at Least One Lead Test on or before Second Birthday

#### Total Enrollment

- Enrolled in measurement month

#### Continuous Enrollment

- Based on MMIS eligibility system

- Enrolled in same health plan for the measurement month and 12 months preceding 2nd birthday, with a 1-month allowable gap.

Gina,

Thanks for the feedback. I especially like the boxes—obviously I’m not a design person, but we have people who are. So the answer to your question becomes “yes, we’ll run it by our Communications office, who are the experts in this sort of thing.”

Bob

Thanks Bob!

Do you know if MDCH is planning to “format” this letter so that it’s less of a word-doc and more template looking? I made a couple of minor edits in green. See my vision in action, attached. I think it looks great though—clear, concise, and generic enough for the many stakeholders.

Thanks,

Gina

**Subject:** Provider Education Workgroup - draft of Community Rx for Children with Elevated Blood Lead Levels 5 to 14 ug/dL

Hello all,

Per our discussion at the 4/14/14 meeting of the Provider Education Workgroup, please review the attached draft. This is intended to be a customizable one-pager that primary care providers can give parent/guardians. Text in red indicates portions to be customized for each community, by each contracted local health department.

I made several changes to the previous draft in response to your suggestions (according to my notes and my somewhat leaky memory). Changes include:

- Making the first paragraph simpler and more direct
- Dividing the “follow-up instructions” into a set of three clear steps for the doctor and the remaining items for the family
- Removing the item for getting an inspection (too expensive to be realistic)
- Adding potential links to social media

There was also a suggestion of providing an example of a completed form, especially for the “Local Resources” section. I’ll work with one of our local partners on that.

All of our local partners for Lead Prevention are awaiting this document with bated breath, so I’d appreciate any feedback you might have by Monday, May 19.

Please feel free to call if you have questions.

Thanks,

Bob Scott

Robert L. Scott

Childhood Lead Poisoning Prevention Program

Michigan Department of Community Health

(517) 335-8178

fax (517) 335-8509

**[Insert your community] Rx for Children with Elevated Blood Lead Levels 5 to 14 µg/dL**

**Your** child's name \_\_\_\_\_ Date \_\_\_\_\_

Your child's reported lead level is \_\_\_\_\_

Your child has a low level of lead poisoning. Lead poisoning is serious and can be harmful, especially if your child's level goes higher. It can cause lower IQ and behavior, learning and hearing problems.

You and your doctor can work together to help your child.

**For the doctor:**

1. Set a plan to retest the child within three months, and again as necessary.
2. Consider a blood test for all siblings, and other children in the home.
3. Educate the family on keeping their child safe from lead.

**For the family:**

- Make sure your child is getting the \_\_\_\_\_ [INSERT LOCAL WIC CONTACT INFO] healthy foods that your doctor suggests.
- Contact the [INSERT] County Health Department [INSERT HEALTH DEPT LEAD CONTACT] to learn about cleaning up lead.
- Ask the [INSERT] County Health Department for [INSERT HEALTH DEPT LEAD CONTACT] an application to the Lead Safe Home Program

**Learn more about lead, how to keep your child safe, and who can help.**

Call:

[www.michigan.gov/lead](http://www.michigan.gov/lead)  
[www.epa.gov/lead](http://www.epa.gov/lead)

Social Media:

[INSERT SOCIAL MEDIA LINKS  
if your health department has useful information  
available through Facebook, Twitter, Instagram, etc.]

**Local Resources:**

[INSERT LOCAL ORGANIZATIONS HERE, including name of organization, contact name, phone, and brief description of ways they can help. Include community-based and faith-based organizations, non-profits, safe housing resources, rental advocacy groups, free legal help, others as appropriate. Place a check box next to each resource, so the provider can check those that are appropriate for each family's situation.]

**Comment [G1]:** Removed "your" just due to repetition. Included "reported lead level" as a gentle reminder to reinforce that providers must report this data to MDCH!

**Comment [G2]:** Added boxes to visually separate PCP versus family responsibilities. Adds more of a template feel with highlighted call-to-action.

**To:** Peeler, Nancy (DHHS)  
**Subject:** notes from 12:30 briefing on Flint lead

recommendation - letter to families to go to PCP for testing, share education info  
OUT FROM?

WHO IS THE LETTER GOING

recommendation - letter to PCPs, about how to respond to families

Q: DEQ water testing in schools - needs to be coordinated with what we do with schools - how do we get that information into any letter that goes out?

GEORGE KRISTZIAN - Linda write an email of introduction, then I add him to the group to review the letter, etc.

Can our CLPPP nurse start to pull pieces out into a 1-page protocol for testing? WE can draft something - (for Wednesday...Nick needs to update the Governor)

Aiming to start EBL as of November 1st...probably have to confirm through City of Flint that a house/person is on Flint water.

Case Management ?? visiting nurse agencies that work in the homes? stipend for someone to accompany the nurses?

Safety? law enforcement to accompany nurses/EBL investigators - can we contract with somebody in the community to accompany the people?

My edits on provider letter.

Couple comments:

- Did CDC recommend that we screen all kids up to 6yrs? Should this be done annually now?
- In the letter it says, that if the level is less than 5, we should recheck in 3-6 months? Not sure we need to do that??

PROVIDER DRAFT LETTER  
October 20, 2015

Dear Provider:

As you may be aware from recent news reports, elevated levels of lead have been found in the City of Flint's water system.

To help protect the children of Flint from this serious health hazard, the current lead in water exposure, the Michigan Department of Health and Human Services, with partners at the City of Flint, Genesee County Health Department, Genesee Intermediate School District and Hurley Children's Hospital Health Systems are contacting you want to assist you in providing guidance to support your families.

As you know, elevated levels of lead have been found in the drinking water in the City of Flint. Children can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys, and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found. Lead poisoning is the #1 environmental health threat to young children. While lead paint is primary cause of lead poisoning in Michigan lead can also found in drinking water, soil, pottery, cosmetics and toys, and some home remedies. Adult jobs and hobbies, like auto repair, stained glass and jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

Concerns about the safety and quality of drinking water in the City of Flint have reignited a conversation about appropriately identifying and managing lead poisoning cases. As a primary care provider, you play a critical role in helping to ensure that children and families exposed to lead receive the care and reassurances they need to manage the potential health impacts of lead poisoning.

**Identification.** Children suffering from lead poisoning often fail to present with outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neuro-toxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause attention Deficit Hyperactivity Disorder (ADHD) and has been known to reduction IQ by as many as 5-8 points with levels as low as 10 ug/dl. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

- Due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions, poor diet and water quality, **we recommend that All children under age 6 living in the City of Flint or attending school, childcare or spending time with a caregiver in the City of Flint should be tested for lead poisoning receive a blood lead test.** Pregnant and breastfeeding women living, working or attending school in Flint should also be tested. Blood lead testing should be done through a child's primary care doctor to ensure adequate short-term and long-term follow-up.

Patients may be screened for lead poisoning using a capillary test and certified Lead Care machine. Capillary test of greater than 5ug/dl require a follow up venous test confirmation. Do we need to tell them this? If your office does not use Lead Care equipment, please refer patients directly to ABC.

Formatted: Indent: Left: 0.25", No bullets or numbering

Formatted: Font: Bold

Formatted: Font: Bold

Formatted: Font: Bold

Children suffering from lead poisoning often fail to present outward symptoms. However, early clinical symptoms can include anemia, anorexia, abdominal pain and constipation. Lead is a neurotoxin, and exposure can result in violent and aggressive behaviors, lead to learning disorders, may cause attention deficit hyperactivity disorder (ADHD) and has been known to reduce IQ by as many as 5-8 points with levels as low as 10 ug/dl. Lead is metabolized through the gastrointestinal system similar to iron and calcium, with uptake rates depending on the size and weight of the child. The blood half-life of lead is short (approximately 1 month) but the bone half-life can extend into decades.

- **Management of Blood Lead Levels (BLL) Guidance and Care of Lead Poisoned Patients.** A lead level of less than 5 mcg/dl is not typically cause for concern. However, due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions, poor diet and water quality) it is advisable to retest children within 3-6 months to ensure lead levels are not rising. All children with Medicaid insurance are required to be tested for lead at ages 1 and 2 years of age.
  - a. **BLL < 5 mcg/dl:** A lead level of less than 5 mcg/dl is not typically cause for concern. However, due to multiple risk factors facing many residents in the City of Flint (including aging housing conditions, poor diet and water quality) it is advisable to retest children within 3-6 months to ensure lead levels are not rising.
  - b. **BLL between 5 and 44 mcg/dl:** Lead levels between 5 mcg/dl and 44 mcg/dl require medical case management. Families should receive anticipatory guidance, nutrition counseling and instruction on safe cleaning techniques and appropriate follow-up care. Refer your patients to the Genesee County Health Department for assistance in identifying lead hazards in their homes. **Children with capillary results of 5 mcg/dl and higher must have a confirmatory venous blood draw.** Children with confirmed venous testing results greater than 5 ug/dl within the past 18 months must be retested based on CDC and AAP periodicity guidelines. (See attached "Provider Quick Guidance document for reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.
- **BLL > 44 mcg/dl:** Lead levels over 44 mcg/dl require immediate referral to Children's Hospital of Michigan in Detroit.
- All households in the City of Flint are eligible for free water testing and filters and should be using a certified water filtration system.

In most cases, breastfeeding is considered safe. However, if the mother's blood lead level rises above 40 ug/dl or her level is greater than 20 mcg/dl/dl and the baby has a level above 5 mcg/dl breastfeeding is not recommended.

Lead levels between 5 mcg/dl and 44 mcg/dl require medical case management. Families should receive anticipatory guidance, nutrition counseling and instruction on safe cleaning techniques and appropriate follow-up care. Refer your patients to the Genesee County Health Department for assistance in identifying lead hazards in their homes.

Lead levels over 44 mcg/dl require immediate referral to Children's Hospital of Michigan in Detroit.

- ~~Follow-up Care: Children with capillary results of 5 mcg/dl and higher must have a confirmatory venous blood draw.~~ Children with confirmed venous testing results greater than 5ug/dl within the past 18 months must be retested based on CDC and AAP periodicity guidelines. (See attached "Provider Quick Guidance document for reference). If a child has not been retested within these timeframes, retesting is recommended as soon as possible.

Follow-up Care.

We all want our patients to grow up to be happy, healthy, and contributing members of society. Working together, we can hopefully buffer the impact of the lead exposure! As providers, below are some steps that we can take to support our families.

- a. Continue to educate families regarding lead risks and preventative steps that they can take to minimize their risks.
- b. Healthy nutrition is critical for lead-exposed kids. Make sure your patients are consuming balanced diets high in iron, calcium and Vitamin C. If you have concerns about their nutrition, consider recommending a multivitamin with iron. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. SNAP allows offers a Double Bucks program (contact), where families can get more healthy foods for less.
  - Breastfeeding is highly protective and encouraged. In most cases, breastfeeding is considered safe. However, if the mother's blood lead level rises above 40ug/dl or her level is greater than 20 mcg/dl/dl and the baby has a level above 5 mcg/dl breastfeeding is not recommended.
- c. Because lead is a neuro toxin, children with lead poisoning need longitudinal follow-up and may require developmental and behavioral health intervention services. Continue monitoring your patients' development at every visit. Refer to Early On with any concerns.
- d. Consider additional wrap-around and support services that will benefit your patients – home visiting programs, early head start, head start, transportation services. Call 211 for more info.

Formatted: List Paragraph, Bulleted + Level: 2

Formatted: List Paragraph, Bulleted + Level: 3  
+ Aligned at: 1.13" + Indent at: 1.25"

Formatted: List Paragraph, Bulleted + Level: 2  
+ Aligned at: 0.5" + Indent at: 0.75"

Formatted: Indent: Left: 0.5"

Because lead is a neuro toxin, children with lead poisoning may require behavioral health intervention services. In addition, parents may benefit from nutritional counseling and other health-related supports. The following agencies are partners in lead poisoning prevention and education efforts and are ready and able to help connect your patients to additional services.

- ~~Blood Testing.~~ Contact your doctor or the Genesee County Health Department to get a lead test.

PROVIDER DRAFT LETTER  
October 20, 2015

- ~~Water Testing. Water testing is free at the X,Y,Z. Contact ABC to find how to have your water tested.~~
- ~~WIC and SNAP. WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (616) 237-4537 to learn more.~~
- ~~Child Development. If you have concerns about your child's growth, development or learning contact the ABC to learn about an Early Childhood Home Visiting Program in your area.~~

Eden and Rashmi – Emily and Karen developed a document, and I was toying with it, put same info into a chart. Wanted to start by getting reactions from all of you to these 2 versions of the same protocol, just two different approaches.

Eden, is this what you were thinking of, will this work? Wanted to get your input first, then to the whole group testing protocol group.

Nancy

# **Flint Blood Lead Level Testing Protocols**

## **October 21, 2015**

### **Target Populations**

#### **Priority Level 1:**

- Retesting of any child with an existing EBLL capillary >5
- Retesting of all of venous samples as directed by AAP periodicity follow-up schedule
- All children in Freeman, Brunnell, Eisenhower schools

#### **Priority Level 2:**

All Genesee County child care, preschool, and school facilities not listed above.

### **Methodology**

#### **Priority Level 1:**

Encouraging patients to contact Medical Home to obtain testing through primary care provider

#### **Priority Level 2:**

- Community and Medicaid Health plan Testing Events
- Hurley Pediatric testing events

### **Outreach, Follow-up and Resources**

- Genesee County Health Department case management and support for EBLL>5
- Distribution of letters to families via community partners for guidance, resource and support
- Distribution of letters to primary care provider with guidance and support

## Flint Blood Lead level Testing Protocol

**Subject:** RE: Blood Testing-Version 4 Call

I don't know if the "Tips for Flint Residents" is finalized, and I'm not even sure if I was supposed to look at it, but I have a few edits. Sorry, I'm totally OCD. Under #2, people can also just call 211 to get a filter (this can be added to all handouts for filter access). I'm not sure if it was literacy tested - some big words like accumulate, precautions, etc. Fine print at bottom is same as #1, can just add email to #1. I would also reword sentence under title to "Lead plumbing is common throughout Flint and in all homes built before 1986. Always follow the below steps to ensure safe drinking water."

Attached are my revisions to the parent letter. I tried to simplify and consolidate -- it's in markup mode. I have a 8:15 meeting, but will try to take a stab at provider letter as well before 9am meeting

Hi all – draft letters for Providers and for Parents in Flint are posted in our Sharepoint folder called Flint Workgroup. We put them in both Word and .pdf formats, to assure you can open them. They are rough drafts, so please do add/suggest language where there are placeholders.

Appreciate if you can review and make comments/suggest edits. To find the letters:

Navigate to [www.midppp.org](http://www.midppp.org)

On the dark blue navigation bar, click on Workgroups & Toolkits

Click on the FLINT WORKGROUP folder

Nancy

**Subject:** RE: Blood Testing-Version 4 Call

**Importance:** High

Hi everyone – per our morning conversation, we have created a folder on our Sharepoint site where we can upload documents that we might want to attach to the letters we discussed this morning:

1. Letter for Flint area parents with children in daycare, EHS/HS, GSRP, schools
2. Letter for primary care providers serving children from the Flint area

Please send any materials you think could be good attachments to Emily Houk ([HoukE@michigan.gov](mailto:HoukE@michigan.gov)). Emily is standing by to upload the documents to the folder.

To access the folder, please go to [www.midppp.org](http://www.midppp.org)

On the dark blue navigation bar, click on Workgroups & Toolkits

Click on the FLINT WORKGROUP folder – which is where we will post these materials

We agreed to review materials by Wednesday morning, 10am, to try to finalize the letters at that point.

We are drafting the letters now, will put the draft letters in the same folder, and I will email you once they are posted for your review and comment.

Thanks -- let me know if you have questions or problems accessing the folder.

Nancy

Eden V. Wells, MD, MPH, FACPM

Chief Medical Executive

Michigan Department of Health and Human Services

201 Townsend St., 5<sup>th</sup> Floor CVB

Lansing, MI 48913

Dear Parent,

~~As you may have heard in recent news reports, lead has been found in the City of Flint's water system.~~

To help make sure the children of Flint are safe from ~~lead exposure, this serious health hazard, the~~ Michigan Department of Health and Human Services, with partners at the City of Flint, Genesee County Health Department, ~~Genesee Intermediate School District and Hurley Health Systems~~ Children's Hospital want to help ~~parents and caregivers~~ you understand to:

- ~~Where does lead come from?~~
- ~~What can I do to protect my family?~~
- ~~Understand more about lead poisoning and how to protect your family;~~
- ~~Should I get my child tested for lead? Learn how to get your child tested~~
- ~~Understand how to get their/your household water tested~~
- ~~Know how to get help if your/child has been exposed to lead. Where can I find more information about lead?~~

#### ~~Where does lead come from? Understanding Lead Poisoning~~

~~Where does lead come from? Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys, and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.~~

#### ~~Protect Your Family What can I do to protect my family?~~

##### ~~Protecting your family from Lead in the Water and Obtaining Water Filters.~~

- ~~Get your water testing for lead. It's free. Just call ....~~
- ~~Testing of the water in your home is recommended and is free. If you live in Flint, use a NSF/ANSI 53 water filter in your home. Water filters are easy to install and available for free. Call 211 for a free water filter at x.x.x.~~
- ~~If you do not have a water filter, use bottled water for drinking and mixing formula.~~
- ~~When cooking or washing dishes in tap water, run the water for at least five minutes before you use it.~~
- ~~Use cold water.~~

**Comment [1]:**

May also need to add Flint Community Schools - not always part of GISD

**Lead in the Home.** Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. The most common cause of lead poisoning is lead paint. However, lead is also found in drinking water, soil, pottery, cosmetics and toys, and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making, and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

**Lead in the Water and Obtaining Water Filters.** Elevated levels of lead have been found in the water in the City of Flint. Testing of the water in your home is recommended and is free. If you live in Flint, use a NSF/ANSI 53 water filter in your home. Water filters are easy to install and available for free at x y z. If you do not have a water filter, use bottled water for drinking and mixing formula. When cooking or washing dishes in tap water, run the water for at least five minutes before you use it.

#### Protect Your Family

**Nutrition Matters.** Some foods will help keep lead from being stored in a child's body. Foods with calcium like milk, cheese, yogurt, and tofu are helpful, as are green leafy vegetables like spinach and cabbage. Iron rich foods also help reduce lead from being stored. Iron is in beans, lean meats like fish and chicken, whole grain cereals and peanut butter. Foods with Vitamin C will also help protect your child. These are foods like oranges, orange juice, grapefruits, tomatoes and green peppers. Avoid fatty foods like cookies, cakes, pizza, bacon, potato chips, french fries and hot dogs. Talk to your pediatrician about giving your child a multivitamin every day. Give your child a Multivitamin each day.

Protecting your family from other lead sources:

**Safe Cleaning is Important.** Keeping your home clean and safe from lead hazards will help to protect your family.

- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water.

**Nutrition Matters!** Some foods will help keep lead from being stored in a child's body, especially foods with a lot of calcium, iron and vitamin C. Calcium containing foods include milk, cheese, yogurt, and tofu are helpful, as are green leafy vegetables like spinach and cabbage. Iron is in beans, lean meats like fish and chicken, whole grain cereals and peanut butter. Foods with a lot of Vitamin C include oranges, orange juice, grapefruits, tomatoes and green peppers. Avoid fatty foods, like cookies, cakes, pizza, bacon, potato chips, french fries and hot dogs. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

**Comment [2]:**  
avoidance of fatty foods is no longer recommended for lead. Concern about limiting fatty foods for kids with developing brains (less than 2yr)

**Formatted:** Indent: Left: 1.03", Space After: 0 pt, No bullets or numbering

**Comment [3]:**  
avoidance of fatty foods is no longer recommended for lead. Concern about limiting fatty foods for kids with developing brains (less than 2yr)

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

~~When Testing is Necessary~~ Should my child get a blood lead test?

Children who live in the City of Flint or attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. ~~Pregnant and breastfeeding women living, working or attending school in Flint should also be tested. [?]~~

Where should I go to get a blood lead test for my child?

The best place to get your child's blood lead test is at your pediatrician's office. Your pediatrician will be able to follow up on the labs and provide you with the needed medical and preventative care. If you are unable to go to your doctor, you can also go to the Genesee County Health Department (phone number...).

~~What is a lead test? Testing for lead poisoning is a blood test and is most often done with a quick finger prick. Contact your doctor or the Genesee County Health Department to request a lead test.~~

Understanding your child's lead test result.

- Lead only stays in your blood for about one to two months, so the blood lead level that is done will only reflect recent exposure.
- A lead level below 5 mcg/dl means there is very little lead in your child's blood. You doctor will probably may suggest retesting your child within the next 12 months to make sure the level is not going up.
- A lead level of 5-14 mcg/dl means that child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to make your home safe limit your lead exposure. Your doctor will probably may want to retest your child in 1-3 months to make sure the level is not going up.
- Children with very high levels of lead (over 40) may require treatment at the hospital.

~~Follow-up testing. If your child has been exposed to lead, it is very important that they have follow-up testing to make sure the lead level is going down. Children with very high levels of lead (over 40) may require treatment at the hospital.~~

Transportation. If you need help with transportation to have your child tested at your doctor or health department, please call 211.

Where Can I get more information on lead? to Find Help

Formatted: Space After: 0 pt

Formatted: Font: Calibri

Formatted: Font: Calibri

- Website for MDHSS lead stuff
- CDC
- County health dept, etc

~~Blood Testing.~~ Contact your doctor or the Genesee County Health Department to get a lead test.

~~Water Testing.~~ Water testing is free at the X, Y, Z. Contact ABC to find how to have your water tested.

~~WIC and SNAP.~~ WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the Genesee County WIC office at (810) 237-4537 to learn more.

~~Child Development.~~ If you have concerns about your child's growth, development or learning contact the ABC to learn about an Early Childhood Home Visiting Program in your area.

I agree with Toni - the case management contract with GCHD will be based on actual elevated levels (e.g. Priority 1), and CM will do outreach to those kids. They will not be offering CM to children who don't have a test showing an elevated level (e.g. Priority 2 and 3).

However, if kids from Priority level 2 or 3 DO have an elevated level, that would bump them up into Priority 1.

**Attachments:** Summary - Flint Children Needing Retesting Hurley or not.pdf

The only thing I can think of is the attached, right side, but that's not an answer to Sue's question.

The actual number of children originally on those lists who have since been retested is more like 5 or so, as of last Friday's processing. Today's weekly processing will no doubt show a few more.

One comment, regarding the testing protocol section. Our highest priority group (comprised of children with test results dating back to April 2014) is the kids with elevated capillary tests needing venous confirmatory test, along with kids with elevated venous tests due for follow-up testing. That group is not reflected in your notes.

FYI – at one point we discussed needing for all of us to have the talking points about Flint water that MDHHS released at the beginning of October – boy, that feels like a long time ago. Interesting, in that it shows what the Epi study (using CLPPP data) showed about the situation. Happy reading!

Nancy

## Blood Lead Levels in Flint Talking Points

October 1, 2015

---

- Initial analysis of MDHHS data found that blood lead levels (BLLs) of children in Flint have followed an expected seasonal trend; due to small numbers further analysis was initiated.
- While this analysis of blood lead levels in Flint as a whole remains true, after a comprehensive and detailed review down to the zip code level, we have found that the state analysis is consistent with that presented by Hurley.
- Director Lyon is working closely with DEQ and the administration to take active steps to reduce all potential lead exposures in Flint, and across the state.
- Our Chief Medical Executive has been in communication with the lead investigator at Hurley Children's Hospital, and we continue to work with Hurley, the city of Flint, local and state leaders to verify and analyze data trends.
- Zip code-level data does show that there has been an increase in elevated childhood blood lead levels in specific communities.
  - This does not conclusively mean that the water source change is the sole cause of the increase, but data does show an association.
  - There is an increased proportion of children with elevated Blood Levels (ELBs) in several zip codes, particularly 03 and 04. These appear to have increased over the last 1.5 years.
  - Lead exposure can occur from a number of different sources (such as paint, gasoline, solder, and consumer products) and through different pathways (such as air, food, water, dust, and soil).
  - Although there are several exposure sources, lead-based paint is still the most widespread and dangerous high-dose source of lead exposure for young children in the US and Michigan.
- We reviewed MDHHS statewide data using the same methodology used by Hurley, looking at our numbers by zip code and age ranges, and filtering out non-Flint children.
- Routine surveillance of blood lead levels does not analyze data down to the zip code level. Detailed analysis like this occurs when there is reason to focus in on precise locations or populations.
- MDHHS will be working closely with the Michigan Department of Environmental Quality, Hurley Children's Hospital, the Genesee County Health Department, and community organizations to initiate further action steps.
- We understand that cost may be a barrier to following the recommendations of the local health department. We are actively working with public and private partners to make resources available to those who may need assistance.

- MDHHS is recommending that residents follow the Public Health Advisory issued by the Genesee County Health Department, as well as take further steps to reduce exposures to all forms of lead in and around their homes.

#### *MDHHS Stats and Facts*

- 'High Risk' Zip codes (48503 and 48504)
  - Blood lead level rates among children under six years of age in the high risk zip codes (48503, 48504) were 2.7 times higher than the rest of Genesee County before the switch to Flint River Water.
  - After the switch to Flint River Water, rates in the high risk Zip codes were 3.2 times that of the rest of Genesee County.
- Other Zip codes in Flint
  - Rates of elevated blood lead levels among children under six years of age in other parts of the city of Flint were 2 times that of the rest of Genesee County before the switch to Flint River Water.
  - The magnitude of the elevated rate remained roughly the same during the period after the water source switch.
- Lead abatement through MDHHS was federally funded up until FY14 when Michigan began providing additional funds to abate homes.
- In FY14, \$1.25M General Fund was added. In FY15, General Fund was bumped up to \$1.75M and FY16, General Fund remains at \$1.75M.

#### *Water Filters*

- Our first action item is to work closely with our public and private partners to provide water filters to Flint residents and MDHHS clients.
- To meet this priority, the governor has identified one million dollars in state funding to purchase water filters for Flint residents.
- Given the questions and concerns regarding the change in water source in Flint, MDHHS has authorized the use of emergency services funding to provide water filters for MDHHS clients receiving assistance in the city of Flint.
- We are pursuing a plan for clients who are active Family Independence Program (FIP), Food Assistance Program (FAP), Child Development and Care (CDC), State Disability Assistance (SDA), State Disability Assistance (SDA), or Social Security Insurance (SSI) to that they can obtain filters that are National Sanitation Foundation (NSF) certified to remove lead and ANSI Standard 53.
- We are in discussions with local retailers and will share additional information about where residents can go to purchase filters as soon as those details have been finalized.

- MDHHS currently serves approximately 25,000 households in Flint.

#### *Reducing and Removing Lead Exposure*

- In housing built before 1978, it can be assumed that the paint has lead unless tests show otherwise.
- Make sure your child does not have access to peeling paint or chewable surfaces painted with lead-based paint.
- Children and pregnant women should not be present in housing built before 1978 that is undergoing renovation. They should not participate in activities that disturb old paint or in cleaning up paint debris after work is completed.
- Create barriers between living/play areas and lead sources. Until environmental clean-up is completed, you should clean and isolate all sources of lead.
  - Close and lock doors to keep children away from chipping or peeling paint on walls. You can also apply temporary barriers such as contact paper or duct tape, to cover holes in walls or to block children's access to other sources of lead.
- Regularly wash children's hands and toys. Hands and toys can become contaminated from household dust or exterior soil. Both are known lead sources.
- Regularly wet-mop floors and wet-wipe window components. Because household dust is a major source of lead, you should wet-mop floors and wet-wipe horizontal surfaces every 2-3 weeks.
  - Windowsills and wells can contain high levels of leaded dust. They should be kept clean. If feasible, windows should be shut to prevent abrasion of painted surfaces or opened from the top sash.
- Take off shoes when entering the house to prevent bringing lead-contaminated soil in from outside.
- Prevent children from playing in bare soil; if possible, provide them with sandboxes. Plant grass on areas of bare soil or cover the soil with grass seed, mulch, or wood chips, if possible.
  - Until the bare soil is covered, move play areas away from bare soil and away from the sides of the house. If you have a sandbox, cover the box when not in use to prevent cats from using it as a litter box. That will help protect children from exposure to animal waste.
- Avoid using makeup, containers, cookware, or tableware to store or cook foods or liquids that are not shown to be lead free.
- Remove recalled toys and toy jewelry immediately from children.
- Use only cold water from the tap for drinking, cooking, and making baby formula. Hot water is more likely to contain higher levels of lead. Most of the lead in household water usually comes from the plumbing in your house, not from the local water supply.

- Shower and change clothes after finishing a task that involves working with lead-based products such as stained glass, making bullets, or using a firing range.

#### *WIC Children*

- There are 855 infants participating in WIC in Flint.
- We are working with partners at the United Way to ensure that WIC families have access to water filters and bottled water.
- In homes with infants on WIC, if the household has documentation from an official source of unsanitary water supply issues, that family may be eligible to receive ready-to-feed formula. Families should contact WIC to see if they are eligible.
- Each household would have to be looked at on an individual basis.
- WIC cannot cover bottled water.

#### *Background*

- The results of the Hurley Children's Hospital were reviewed by MDHHS after the study was released last week.
- The analysis that Hurley conducted was different from the initial MDHHS data regarding blood lead levels in Flint.
- MDHHS initial data looked at the entire blood lead levels for the Flint area for the past five years and showed the annual seasonal trends in the area.
- Seasonal exposure is higher in the summer for a variety of reasons including children playing outside in the soil, and when windows are open and lead paint is more likely to be in the air. Further, seasonal variations in water can occur due to changes in temperature, pH , and other factors

I like Mona's idea of creating a "Second" column under "Testing Methodology" placing GCHD as the second of three in that section. In that case remove "Testing available at GCHD" from the third column.... and in all reality.....the bulk we are talking about screening not testing.

You can of course do whatever you want, but GCHD is an independent and constant place to get blood tested – it is not one of these community/health plan events that are popping up to do single day mass screenings.

If you were to prioritize testing methodologies, it would be primary care doctors, GCHD and then least-preferred would be the anti-medical home community/health plan events. So GCHD should actually be the second column.

And under the GCHD, it would include the process - walk-in, appt, lab test, etc. Toni can clarify this.

But of course, it's up to you.

Instead of adding another column that would say the exact same thing in every row, we added a line to the community column as the GCHD is located in the community. The language says: Testing available at GCHD.

If that language should be more expansive or detailed, I'm open to suggestions.

I think I have emailed this about ten times already, there needs to be a third column under testing methodology titled GCHD -- that is an independent site where kids can get blood lead tested- separate from the primary care providers and separate from community/health plan events.

I agree with Toni - the case management contract with GCHD will be based on actual elevated levels (e.g. Priority 1), and CM will do outreach to those kids. They will not be offering CM to children who don't have a test showing an elevated level (e.g. Priority 2 and 3).

However, if kids from Priority level 2 or 3 DO have an elevated level, that would bump them up into Priority 1.

On the conference call we were just on.....my understanding is for Providers to all go electronically. Parents would go through the Early Childhood education programs and all Flint schools in back packs.....I just confirmed this with the Flint Schools nurse Eileen Tomasi and she said they could do it. I am still trying to get some numbers on licensed and unlicensed day cares. Looking like we will need at the very least 10K of each item (potentially more).

**Subject:** RE: Time Sensitive-Updated Testing Protocol October 22, 2015

You can of course do whatever you want, but GCHD is an independent and constant place to get blood tested – it is not one of these community/health plan events that are popping up to do single day mass screenings.

If you were to prioritize testing methodologies, it would be primary care doctors, GCHD and then least-preferred would be the anti-medical home community/health plan events. So GCHD should actually be the second column.

And under the GCHD, it would include the process - walk-in, appt, lab test, etc. Toni can clarify this.

But of course, it's up to you.

**Subject:** RE: Time Sensitive-Updated Testing Protocol October 22, 2015

Instead of adding another column that would say the exact same thing in every row, we added a line to the community column as the GCHD is located in the community. The language says: Testing available at GCHD.

If that language should be more expansive or detailed, I'm open to suggestions.

**Subject:** RE: Time Sensitive-Updated Testing Protocol October 22, 2015

I think I have emailed this about ten times already, there needs to be a third column under testing methodology titled GCHD – that is an independent site where kids can get blood lead tested- separate from the primary care providers and separate from community/health plan events.

I agree with Toni - the case management contract with GCHD will be based on actual elevated levels (e.g. Priority 1), and CM will do outreach to those kids. They will not be offering CM to children who don't have a test showing an elevated level (e.g. Priority 2 and 3).

However, if kids from Priority level 2 or 3 DO have an elevated level, that would bump them up into Priority 1.

Got it. I added "GCHD" under Case  
Management to help clarify this (I  
hope?).

Documents are now on sharepoint.

Mona, I apologize for missing your parent edits. I have incorporated most, if not all of them. Thank you for your help.

**Subject:** Updated  
Testing Protocol  
October 22, 2015

Good morning,

The updated testing  
protocol document is  
attached.

Based on emails from  
last night, I:

1. Removed the  
Hurley column
2. Did NOT include  
2-1-1 in the testing  
protocol

Let me know if you  
have additional edits.

Hi Kris – attached is the file of addresses and Guardian names we have associated with children for whom our data indicates elevated blood lead levels. I am hoping to touch base about the best way to compare this list with your database of who has received filters. You had indicated (a week ago?) that your area could do the comparison – is that still true, or how can we assist?

Hi all,

I was out of the office Friday so I apologize for the late response. With the parent letter, do you mean to communicate that you need to run the tap for five minutes before you can wash your hands? "You can use unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it." This sentence reads as though every time you wash your hands with unfiltered water, you need to run the tap for five minutes. I know most families will have concern with that.

Thanks,

**Tamara Brickey, MS, CHES**

Documents look great, a couple edits—

**Press Release:**

“As we continue to find ways to inform and guide the Flint community towards reducing lead exposures, we are appreciate appreciative of the collaboration with Genesee County Health Department,” said Dr. Eden Wells, Chief Medical Executive with MDHHS. “Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint.”

**Parent Letter:** The word doctor is used throughout the document- we should stay consistent.

**Where should I go to get a blood lead test for my child?**

The best place to get your child’s blood lead test is your doctor’s office. Your doctor ~~pediatrician~~ will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

**Subject:** Re: Time sensitive:Final Press Release/ with attachments

I just talked to Linda Dykema. I am sending her the parent letter. Well Mark Bella check and I thought eight hours was appropriate she feel Linda thanks APA states you should do a mid day flush as well so that if the line is not been flushed for 3 to 4 hours. She will look at this and then I will go with whatever her recommendation is on the time. That note Nancy that at least on the other letters in general you flush the line 5 minutes but that's not meant to happen every single time one washes their hands or has need for unfiltered tap water during the day.

Sent from my iPhone

On Oct 26, 2015, at 12:08 PM, Peeler, Nancy (DHHS) <[PeelerN@michigan.gov](mailto:PeelerN@michigan.gov)> wrote:

Two concerns --

1. The new language is not at a 4<sup>th</sup> grade reading level like the rest of the letter.
2. It isn't consistent with what the information in other documents -- we have been basing our documents on the EPA recommendations, and have consistently referenced running the water for 5 minutes. Nowhere else do we include in the information about running the tap first thing in the morning or if the faucet has not been used in more than 8 hours.

So -- we can try to wordsmith it more, to bring the new bullet down in reading level. And, if we go with all of this information, do we need to change other attachments (Parent Handout, etc.) to talk about running the tap in the morning/if not used in 8 hours?

Angela, we defer to you as to whether to make more changes. I'll wait to hear back from you before I have Emily do anything else --

Hi all,

I was out of the office Friday so I apologize for the late response. With the parent letter, do you mean to communicate that you need to run the tap for five minutes before you can wash your hands? "You can use

unfiltered tap water for washing your hands, and washing dishes. If using unfiltered water, run the water for at least five minutes before you use it." This sentence reads as though every time you wash your hands with unfiltered water, you need to run the tap for five minutes. I know most families will have concern with that.

Thanks,

**Tamara Brickey, MS, CHES**

Documents look great, a couple edits----

**Press Release:**

“As we continue to find ways to inform and guide the Flint community towards reducing lead

exposures, we are appreciate appreciative of the collaboration with Genesee County Health Department,” said Dr. Eden Wells, Chief Medical Executive with MDHHS. “Parents and providers can take a number of steps to help reduce exposure, identify signs of lead poisoning, and begin follow up care as needed. Working together we can all help to protect the health of families in Flint.”

Parent Letter: The word doctor is used throughout the document- we should stay consistent.

**Where should I go to get a blood lead test for my child?**

The best place to get your child’s blood lead test is your doctor’s office. Your doctor ~~pediatrician~~ will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

October 26, 2015

Dear Parent,

To help make sure the children of Flint are safe from lead exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services want to help you understand:

- Where does lead come from?
- What can I do to protect my family?
- Should I get my child tested for lead?
- Where can I find more information about lead?

#### **Where does lead come from?**

Lead is a serious health hazard, especially for small children who become lead poisoned when they eat, drink or breathe lead. Elevated levels of lead have been found in the drinking water from lead pipes in the City of Flint. Kids can also be exposed to lead from old lead paint, soil, pottery, cosmetics and toys and some home remedies. Adult jobs and hobbies, like auto repair, stained glass, jewelry making and ammunitions handling can also put children at risk if they touch clothing or play in areas where lead is found.

#### **Should my child get a blood lead test?**

Children who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint should be tested for lead poisoning. *This should be done as soon as possible.*

#### **Where should I go to get a blood lead test for my child?**

The best place to get your child's blood lead test is your doctor's office. Your pediatrician will follow up with you on lab tests and provide you with information on what to do next. You can also have a lead test at the Genesee County Health Department. If you need transportation, contact 2-1-1 for help.

#### **Understanding your child's lead test result.**

A lead level below 5 means there is little or no lead in your child's blood. Use the tips below to help keep your child safe. Your doctor may suggest retesting your child within the next 12 months to make sure the level does not go up.

**Comment [DLD1]:** Redundant with previous help

**Comment [DLD2]:** This doesn't address where lead comes from. A section (question) about health effects should be added.

**Comment [DLD3]:** Incomplete sentence

**Comment [DLD4]:** This statement is wrong. A blood level below 5 does not mean there is no lead in the blood. Even with a level below the method detection limit (MDL) of 1 or 3 it cannot be stated that there is no lead in the blood. Suggest: A lead level below 5 mean there is a little lead in your child's blood. Should also include a sentence to explain results below the MDL as evidenced by my recent experience with a Flint family.

A lead level of 5-14 means that your child has had some exposure to lead. Work with your doctor and local health department for further guidance on how to limit your lead exposure. Your doctor may retest your child in 1-3 months to make sure the level does not go up.

Children with very high levels of lead (**over 40**) may require treatment at the hospital.

**Comment [DLD5]:** Always at the hospital or are there out patient treatments?

### What Can I Do to Keep My Family Safe?

The following steps should be taken right away to help protect you and your child.

#### Protecting your family from lead in the water:

- Get your water tested for lead. It's free. Call (810) 787-6537 to learn more.
- ~~Use a water filter in your home. Call 2-1-1 for information on free water filters.~~
- Run only cold water through the filter.
- If you do not have a water filter, use bottled water for drinking and mixing formula.
- Use filtered or bottled tap water for drinking (including making coffee, drink mixes, juice, baby formula), and cooking (even if you boil the water, the lead will stay in the water and food). ~~Always use cold water when cooking.~~
- You can use unfiltered tap water for washing your hands, and washing dishes.
- ~~If you must use unfiltered water must be used for consumption, for drinking or cooking, run the tap for five minutes prior to consuming before using the water. Do this first thing in morning or if the faucet has not been used in more than 8 hours.~~

#### Safe cleaning:

Safe Cleaning is important. Keeping your home clean and safe from lead hazards will help to protect your family.

- You can use unfiltered tap water ~~for the following to wiping down countertops, mopping floors, and washing clothes.~~
- Keep children away from lead paint and dust.
- Use wet paper towels to clean up lead dust. Be sure to clean around windows, play areas and floors.
- Wash hands and toys often, using soap and water.

**Comment [DLD6]:** This direction is not very useful as there's no way for the average person to identify lead paint and dust without testing.

**Comment [DLD7]:** Same comment

#### Good nutrition:

Some foods will help keep lead from being stored in a child's body. These are foods with a lot of calcium, iron and vitamin C. These foods include:

**Calcium Rich Foods**

**Iron Rich Foods**

**Foods with Vitamin C**

- |           |                                    |                 |
|-----------|------------------------------------|-----------------|
| ➤ Milk    | ➤ Beans                            | ➤ Oranges       |
| ➤ Cheese  | ➤ Lean meats like fish and chicken | ➤ Orange juice  |
| ➤ Yogurt  | ➤ Whole grain cereals              | ➤ Grapefruits   |
| ➤ Tofu    | ➤ Peanut butter                    | ➤ Tomatoes      |
| ➤ Spinach |                                    | ➤ Green peppers |

Always wash your fruits with filtered water. If you are concerned about your child's diet, talk with your pediatrician who may also recommend a daily multivitamin.

WIC and SNAP provide assistance to parents and children who need fresh and healthy foods. Contact the **Genesee County WIC office at (810) 237-4537** to learn more. SNAP also offers a Double Bucks program to purchase even more healthy food for no additional costs.

#### **Where can I get more information on lead?**

Hi Sue, here's is today's update, sorry you didn't get it with the first email. There are so many people involved in different aspects of this work, at different levels. Can you help us think about who all this should go to on a weekly basis?

Sue Moran  
Eden Wells  
Angela Minicuci  
Rashmi Travis  
Brenda Fink and our CLPPP program staff, as an FYI

Others you want to be sure are on the email each week? Mikelle, Mark? Corinne? Linda? Who from Flint? Anyone from DEQ? Thanks for helping us to think about this - perhaps we could discuss during the 12:30 call on Tuesday.

Nancy

We've been having the same conversation here -- yes, we can do that, happy to do that. Bob was starting to work on a format this morning. If you have specific information you would want in a weekly report, let us know, as that will help us to pull what you really need. I know Epi was also talking about a weekly analysis of sorts, which I think would go more in-depth than the counts and such we can give you as a starting point.

**Subject:** BLLs Latest

Hi Nancy and Bob,

Out of curiosity, could we begin looking at pulling some data about recent Flint BLL data? I think all results have to be reported to us within 5 days of the test result, correct?

If so, is there any chance we can begin taking a look at what that data is telling us? Not wanting to do anything with it yet, but just trying to think a little more proactively.

Thanks,

**Angela Minicuci**

**Subject:** Re: BLLs Latest

Hi Bob - we can work on the email list for this report tomorrow - too many cooks in the kitchen to track everyone - I saw your previous email and didn't even think about who else to send it to. So we'll just have the many cooks help us out with developing the list.

I do have a question about the report - how do the new EBL numbers work with the summary numbers on the upper left? For example, I see 8 new elevated results for children < age 6. But the summary numbers seem the same as last week.

Similarly, I see that there were 2 venous confirmatory tests for prior capillary tests - would that then adjust any of the summary numbers (e.g. would 2 kids drop off the capillary list)?

It may be that by the time you did all the addition and subtraction, the numbers look the same. But I wanted to check! Thanks -

Nancy

**Subject:** RE: BLLs Latest

I can do it. How about this?

- 1) Total number of children tested since 9/28/15 press conference.
- 2) Total number of children with capillary EBLLs since 4/1/14 water change, still needing confirmation.
- 3) Total number of confirmed EBLL cases since 4/1/14.
- 4) Total number of children with capillary EBLLs since 9/28/15, needing confirmation.
- 5) Total number of confirmed EBLL cases since 9/28/15.

We've been having the same conversation here – yes, we can do that, happy to do that. Bob was starting to work on a format this morning. If you have specific information you would want in a weekly report, let us know, as that will help us to pull what you really need. I know Epi was also talking about a weekly analysis of sorts, which I think would go more in-depth than the counts and such we can give you as a starting point.

Nancy

**Subject:** BLLs Latest

Hi Nancy and Bob,

Out of curiosity, could we begin looking at pulling some data about recent Flint BLL data? I think all results have to be reported to us within 5 days of the test result, correct?

If so, is there any chance we can begin taking a look at what that data is telling us? Not wanting to do anything with it yet, but just trying to think a little more proactively.

Thanks,

**Angela Minicuci**

**Subject:** Re: NBC News/Lead Data

If you were to lay it out the way the reporter requested (by county, or by zip), would we have any cells with less than 5, such that we would need to be concerned about supression of data? I supposed you may not be able to answer that until you look at the spreadsheet...

Since it is de-identified data, would Legal want there to be a DUA or IRB application or anything like that? I realize that there is already a report on the website, so I'm thinking no, but just checking!

**Subject:** NBC News/Lead Data

Hi Scott,

As I mentioned by phone, I was looking to see if I could get the "children tested for lead poisoning" 2012/2013 data that you all publish in your reports in spreadsheet rather than PDF format.

As this data does, I'd like the spreadsheet to include the number of kids younger than six, the number of children children tested, and the number of those found to have blood levels higher than 5 and 10 ug/DL, all broken down by county. If possible, I'd like it broken down by zip code.

We're taking a national look at lead and childhood lead poisoning, and I'm making similar requests to each state. My deadline is Thursday, if possible, and I am available anytime by phone or email.

Thank you very much for your assistance, and for forwarding this along.

Best,

Lisa Riordan Seville

**Cc:** Fink, Brenda (DHHS)  
**Subject:** follow up monitoring for Genesee PH

Here are the metrics that were included in our Case Management contract with GCHD:

**Metrics for Contract Monitoring**

Contract monitoring will be based on data recorded in the Healthy Homes and Lead Poisoning Surveillance System (HHPSS), Medicaid Claims data from the MDHHS data warehouse, and via weekly review and status calls.

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services.
2. Number and percentage of target children receiving case management services.
3. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits.

Karen – on your weekly calls, we will need to get updates on these metrics. We will need them organized based on the testing protocol, so we can understand what is happening for each group of children listed in that protocol, and then overall. Karen, I will send you some additional information, wanted to make sure we put this on our list to review together.

Wes – Karen has weekly calls scheduled with GCHD; do you want to have someone participate on those calls related to linking the case management and EBL investigation activities?

Nancy

**Importance:** High

HI – when you are back, this is what I want to review/refine for the weekly status calls with Flint. Hope all went well with CM and HHPSS training! Have a good Veteran's Day off...

## FLINT BLOOD LEAD LEVEL TESTING PROTOCOL

		A	B	C	D	E	F
	Target Population	# contacted and offered case management	% of total (A/X)	# of children receiving CM	% of total (C/X1) and (C/A)	# of Medicaid claims filed	% for whom Medicaid claims filed (E/C)
PRIORITY LEVEL 1	All children with elevated Capillary > 5 since April 2014 (total = X1 )						
	All children with newly elevated Venous > 5 since April 2014 (total = X2)						
	All children with new elevated Venous $\geq$ 5 since October 2015 (total = X3*)						
	<b>TOTALS</b>						

\* this number will change weekly

### Metrics included in contract

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services. A and B
2. Number and percentage of target children receiving case management services. C and D
3. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits. E and F

**Subject:** RE: Lead data

Sorry, I missed this email amongst the others - the simple answer is that the labs send their data directly to MDHHS/Bob. Bob and Jessica then process the data and upload into the warehouse.

Nancy

Subject: Lead data

Do labs send their BLL data to Bob, and then it gets loaded to warehouse, or are labs uploading files directly into warehouse?

Hi,

I wanted to give you a summary of the lead screening and case management activities. I will not be on the call this afternoon. Getting things set for Thursday. Overall, things went very well last week with a much smaller turnout than hoped. But not necessarily surprising.

Toni

### **Summary of GCHD Lead Program Activities as of 11/09/2015**

1. Lead testing clinic for outreach was held at Burton clinic on 11/5/15. This was a special event resulting in 39 children being screened or tested for lead poisoning.
  - 17 children were screened via capillary sample with results less than 3
  - 1 child's screening level was a 3
  - 1 child's screening level was a 4
  - 2 were tested using venous sample, these were sent to the state lab for analysis, results not yet known
  - The rest (18) were done as capillary samples by McLaren Health Plan staff and results are not yet known by GCHD
2. Children in Flint with Elevated Blood Lead Levels list from MDHHS (160 children plus 6 who have been retested and had new level less than 5)
  - 81 Children with Capillary test results greater than 5 needed contact for confirmation testing:
    - 75: 5-9 levels
      - 38 attempts to contact were made
      - 14 families were reached
        - 6 did not have water filters
      - 9 letters were mailed
    - 6: 10-14 levels
      - 2 attempts to contact were made
      - 2 children's family were reached
    - 0: Greater than/equal to 15
  - 79 Children with Venous test results greater than 5 need case management contact:
    - 68: 5-14 levels
    - 7: Greater than/equal to 15
      - 2 were recently opened to case management 9/25/15
      - 8 children from this list were already open to case management prior to list creation
    - 4 were not due for retesting yet
3. 3 children were found to have levels between 10-20 via capillary screening completed at GCHD Lead clinic (not the clinic noted above). The results for these children have not yet made it to the list from MDHHS, but should be added soon.
4. 1 home visit was made 11/2/15 to a home for case management regarding an elevated blood lead level over 20. Family does have a water filter in place.

**Attachments:** Prelim rec for CLPPP services for MHP 7.2.15.doc

**Preliminary recommendations for CLPPP related services through MHP\***

Testing status	Lead level (Venous)	which Providers/protocols	Actions
Before test	Unknown	Primary Care Provider <sup>1</sup>	Medicaid requires BL testing at 12 & 24 months
After test	0-4	Primary Care Provider	Provides anticipatory guidance about lead hazards
	5-14	Primary Care Provider  Community Health Worker <sup>2</sup>  MHP Care Manager	Orders retesting w/in 1-3 months, monitors BLL Refers to MHP for in home CM services and education by CHW Provides in home education about lead hazards, cleaning techniques and nutrition  Assures testing and referrals are completed
	15-44	Primary Care Provider  CHW  Registered Nurse <sup>3</sup>  MHP Care Manager <sup>4</sup>	Actions above Retest/confirm within 1-3 weeks Provides in home education about lead hazards, cleaning techniques and nutrition In home Nursing Assessment  Coordinates Care and EH services with local HD (?) or outside entity
	45+	Primary Care Provider  Registered Nurse  MHP Care Manager  CHW	Refers to CHM for possible chelation Above actions Provides in home follow up  Coordinates care, EH services and i.d. of safe housing with local HD (?), HHS or outside entity and CHM staff (after chelation) Above actions

--	--	--	--

<sup>1</sup> PCP protocol is defined in EPSDT chapter of Medicaid manual

<sup>2</sup> Working on defining CHW protocol; anticipate this would be prevention-focused to address lower lead levels (5-14), and would include in-home education about nutrition, lead hazards, how to appropriately clean the home, temporary 'fixes' (e.g. put plastic sheeting over peeling paint – not repairs)

<sup>3</sup> Nursing assessment protocol can be based on existing CLPPP Case Management protocol (with modifications) Includes developmental screening, and appropriate referrals i.e. Early On, Hearing screening, HHS Leadsafe Home Program ect.

<sup>4</sup> Working on understanding this role as it is defined now; need to differentiate role of MHP Care Manager from the in-home nursing/Nursing Assessment service. Guessing that the MHP Care Manager would coordinate services paid by the MHP, support getting info back to the PCP, follow up testing ordered, etc. Whereas Nursing Assessment might focus more on coordination of services in the community (e.g. not paid by MHP).

*\*Note: this does not currently include anything about home inspections/elevated blood lead level investigations. Wes and his staff would need to be involved in that discussion.*

**Subject:** update on lead

Nancy,

I was on a call with Genesee County Health Dept this afternoon and wanted you to check in that you were working on getting data from the GCHD and reporting out how many were tested, how many followed up, etc. They (GCHD) will need to report out on these weekly when we do our call.

Also, I am on a call with CDC and GCHD – I was told about this 2Pm call at 1:30Pm. It appears that others have commented that the parent letter and attachments are too high a readability. CDC has comments on this too. They will provide a lead dictionary to explain the terms. I explained we have reviewed and created these document on the standard of a 6<sup>th</sup> grade reading level. They still thought that was too high. We also asked them to send info on water specifically. So, more to come on this or we may be asked to revise some of our materials.

Rashmi

On Oct 19, 2015, at 3:56 PM, Miller, Mark (DHHS) <[millerm1@michigan.gov](mailto:millerm1@michigan.gov)> wrote:

Jeanette and Nancy,

I just had a call with Sue, Rashmi and Genesee on possible vehicles to get nurses to do the follow-up on children in Flint with elevated lead levels.

Mark Valacak, the health officer already has a nurse, Sherry XXXX, who is experienced in lead management, but currently working in immunization. He also has another nurse ID'ed who can do the task. Depending on how much \$ we send, he could get a couple more nurses for the follow-up, from his seasonal nurse bank (retired public health nurses).

At any rate, looks like the vehicle would be through the GCHD, rather than us trying to contract from up here.

Nancy what do you think of this scheme?

Jeanette, how should we work this in Egrams. Set up a separate new project?

Augment an existing project, like MCH Block Grant?

Some other procedure?

What would be fastest?

Thanks

Hello everyone,

The doodle poll indicates that this Friday afternoon is best for attendance. I would have sent this sooner, but I was off work yesterday. Everyone is included in this meeting appointment, although some have indicated that they can't attend. GCHD has our recurring water briefing at 1pm on Friday, so the meeting is scheduled for 1:30pm.

Below are agenda topics and some of the factsheets that we'll be reviewing. Primarily, the intent is to ensure the current and future messages are appropriate for our targets. Michelle Bruneau, MDHHS will bring a laptop and projector to display the written communications. Michelle, feel free to update the agenda and if possible please send electronic copies of the CLPPP and other documents to the group for review prior to Friday's meeting.

<<Lead\_and\_your\_Body\_-\_Flint\_-\_no\_background\_504124\_7.pdf>> <<2015-10-21 - Lead - Flint Water FINAL.pdf>>  
<<2015-11-13 - Phosphate in Flint 02 DRAFT (2) - Copy.pdf>> <<GCHD\_Lead\_in\_Water\_Fact\_Sheet\_\_2\_ - Copy.pdf>>

#### **Agenda Topics:**

- **Update the Communications Plan**

Perhaps we can also revisit the draft communications plan and identify what needs to be updated and community needs, and get that table filled in with action items and point people as well, so at least we have some focus. As part of the communications plan, we can address:

- **Readability of Existing Materials – Which materials are a problem, what would you like to see instead?**
- **Gaps in Outreach – What are we missing?**

- **Focus Group vs Community Survey?**

## Pregnant Woman

If you are exposed to lead when pregnant, the lead can be passed on to your fetus, possibly causing:

- premature birth
- a smaller baby
- learning difficulties
- slower growth in young kids

## Healthy Adult

You are at lower risk of health problems from small amounts of lead.

Most health problems that come from lead in adults are because they are exposed to a lot of it at their job - whether they are in painting or construction or work at a factory where lead is used in a product.

If you work with lead, you should have regular blood tests to make sure you're not getting too much into your body.

## Kids

Even small amounts of lead can harm kids' health. Your doctor can do a simple blood test to find out if your child has been exposed to lead. Some possible signs of lead poisoning include:

- a bad stomachache
- muscle weakness
- paleness (caused by anemia)

Over time lead can affect a kids'

- brain development
- growth rate

## How Does Lead Get Into Your Body?

**Eating and breathing lead dust is the most common way lead gets into your body.**

- When kids accidentally eat lead, up to 50% can be absorbed into their bodies, compared to 3 to 10% for adults. This is why protecting kids from even small amounts of lead is important.

**Lead does not absorb into your skin quickly or at high levels.**

- The CDC reviewed a study where a cream with high levels of lead was put on the skin of adults. The cream was left on their skin for 12 hours. The amount of lead that soaked into their skin was very, very small (less than 0.3 percent).
- Taking a shower or bath in water containing lead at levels found in most tap water in Michigan is unlikely to be a problem for anyone, including kids.

If you think you or your children have been exposed to lead, please talk to your doctor or health department about getting a simple blood test to measure how much lead might be in your body.

For more information on protecting yourself and your family from lead, please visit: [www.michigan.gov/lead](http://www.michigan.gov/lead), or you can call the Michigan Department of Health and Human Services at 1-800-648-6942. We will help direct you to the best department that can answer your questions about lead in your home.

You can also call the Flint Water Department at 810-787-6537 to request a free or low-cost water test. If you use City of Flint water, you can call 211 to find out where you can pick up a free NSF-approved water filter.

# Frequently Asked Questions About Lead in Flint Water

- Lead is hard to avoid completely. It can be found in old paint, water pipes and brass water faucets, in dirt, at some job sites, and in metal used for some hobbies.
- The amount of lead found in some Flint homes' drinking water could affect kids' health.
  - Even small amounts of lead can harm kids' health because they are little and still growing.
  - Adults are less likely to be harmed by the levels found in the water.
- Filter your drinking water using a NSF-approved filter.
  - Find a NSF-approved filter at [http://www.gchd.us/docs/lead\\_filter\\_information.pdf](http://www.gchd.us/docs/lead_filter_information.pdf).
  - If you use City of Flint water, you can call 211 to find out where you can pick up a free water filter.
- Some filters can remove up to 99% of the lead in water when used properly. To be sure your filter is removing as much lead as it can, carefully follow the instructions that came with it.
  - Change the filter cartridge as often as you should.
  - Run only cold water through the filter.
- Even after changes to the water system, it may take a while before lead levels in your home's water drop. Use the tips below to know when it's best to use filtered water:

## Lead in Water

Although your water may be a different color sometimes, it is not caused by lead. It's important to remember:

- You can't see, smell, or taste lead in water.
- Lead won't change the color of your water.
- The only way to know what your home's lead levels are is by having your water tested in a lab.

Please call the Flint Water Department at 810-787-6537 to request a free or low-cost water test.

## In The Kitchen

Use filtered tap water for:

- Drinking (including making coffee, drink mixes, juice, baby formula)
- Cooking (even if you boil the water, the lead will stay in the water and food)
- Washing fruits and vegetables

You can use unfiltered tap water for:

- Washing your hands
- Washing dishes
- Wiping down countertops

## Cleaning

You can use unfiltered tap water for:

- Mopping floors
- Washing clothes

Your washing machine and dryer won't put lead from the water into the air of your home.

## In the Bathroom

Use filtered tap water for:

- Brushing kids' teeth

You can use unfiltered tap water for:

- Showers
- Baths (don't let kids drink the water as they play in the tub)
- Brushing your teeth (if you are an adult)

Lead will not cause rashes or other skin problems. However, if chlorine levels or other cleaners are high in the water, it may cause itchy or dry skin (similar to what can happen when you swim in a pool).

## Caring for Pets

Use filtered tap water for:

- Pets' water bowls

You can use unfiltered tap water for:

- Baths

If you notice your pet acting differently than normal, please contact your vet.

## Other Sources of Lead in Your Home

### Lead Paint

- Homes built before 1978 likely have lead paint, both inside and outside.
- Old paint is the most common way that kids are exposed to lead.

### Dirt

- If you live in the city, there may be lead in the dirt outside your home.
- Before 1996, gas and the exhaust from cars contained lead. More lead will be found in dirt in busy traffic areas.

### Dust

- The dust in your home can contain tiny amounts of both the paint and the dirt that contain lead.

### Hobbies & Jobs

- Solder, fishing sinkers, bullets, and stained glass framing materials are some of the items in your home that may contain lead. You could also track home lead dust from your job site.

## Have Questions?

For more information about protecting yourself and your family from lead, please visit:

[www.michigan.gov/lead](http://www.michigan.gov/lead)

Or you can call the Michigan Department of Health and Human Services at:

**1-800-648-6942**

The staff at this number will help direct you to the best department that can answer your questions about lead in your home.

To request a free or low-cost water test, please call the Flint Water Department at:

**1-810-787-6537**

To find out if you can get a free water filter, please call 211.

# Frequently Asked Questions About Adding Phosphate to Flint Water

## Why is phosphate being added to our water?

- Water pipes in homes built before 1986 could have lead in them. Brass faucets and certain kinds of solder could also have lead in them.
- The lead found in tap water in the City of Flint is from these older pipes, solder, and faucets.

- Over the years, minerals that are in our water had built up on the inside of pipes, keeping the water from actually touching the lead pipes. This is called scale.
- This scale helped to keep a lot of lead out of our water.

- Because of the cleaning products added to the Flint River water, some of the scale was cleaned from the pipes that bring the water to our homes.
- This has let the water touch the pipes again and pick up the lead that is in them.

- By adding extra phosphate to the water, the scale will be able to build back up faster than just waiting for it to happen again naturally.

## Learn About Phosphate

- Phosphorus is a natural mineral that your body needs. Along with calcium, it works to keep your bones strong and healthy.
- Phosphate is a type of salt that has phosphorus in it.
- Phosphate is being added to the water in the City of Flint to help put the scale back on the pipes.
- The City of Flint has calculated how much phosphate is needed to help coat the pipes without getting too much in your drinking water.
- The levels of phosphate in your drinking water will be safe for everyone - but continue to use filtered water until the Genesee County Health Department Advisory is lifted.
- Using the filter will protect your family from lead in your water until the scale can be rebuilt.

If you have questions about the phosphate being added to City of Flint water, please call the Flint Water Department at 810-787-6537.

If you have questions about phosphates and your health, please call MDHHS at 1-800-648-6942.

## **How does lead get into my tap water?**

Under typical circumstances, lead will dissolve into the water. The concentration of lead in drinking water can vary greatly, depending on the corrosiveness of the water, the type and age of the plumbing materials and the length of time that the water stands in the pipes. The highest levels of lead occur when very corrosive water stands motionless in lead or lead soldered pipe for long periods of time.

## **How do I know if my tap water is contaminated with lead?**

The only way to know whether your tap water contains lead is to have it tested. You cannot see, taste, or smell lead in drinking water. There are different sampling methods for sampling lead in drinking water. To determine your household risk, it is recommended to take a first draw sample.

## **Does lead in my tap water cause health effects?**

Lead can cause damage to the brain, red blood cells and kidneys. The greatest risk is to young children and pregnant women. Amounts of lead that won't hurt adults can slow down normal mental and physical development of growing bodies. Lead in water can be a special problem for infants, whose diets may be mostly liquids, such as baby formulas or concentrated juices mixed with water. Smaller bodies can absorb lead more rapidly than bigger ones. A child's mental and physical growth can be permanently harmed by too much lead. Risk will vary, depending on the individual, the circumstances, and the amount of water consumed.

## **What can I do to reduce or eliminate lead in my tap water?**

Flush your cold-water pipes by running the water for approximately 5 minutes. The longer the water has been sitting in the pipes, the more lead it may contain. You can fill containers for later use, after the flushing process. Use only water from the cold-water tap for drinking, cooking, and especially for making baby formula. Hot water is likely to contain higher levels because it dissolves more lead.

You may choose to install a water filter that is NSF-certified for lead removal. If a water filter is installed, replace filters at least as often as recommended by the manufacturer.

Buy a lead-free faucet. The legal definition of "lead-free" still allows brass faucets to contain up to 8 percent lead. However, faucets marked with "NSF 61/9" and/or "California Proposition 65" meet stricter limits. Regularly clean particles from faucet aerators.

**Is it safe to take a bath or shower, if my water has high lead levels?**

Yes. Bathing and showering should be safe for you and your children, even if the water contains lead over EPA's action level. Human skin does not absorb lead in water. This information applies to most situations and to a large majority of the population, but individual circumstances may vary. Some situations, such as cases involving highly corrosive water, may require additional recommendations or more stringent actions.

**Who do I contact for more information?**

The local water authority is always your first source for testing and identifying lead contamination in your tap water. You can visit the City of Flint Website at [www.cityofflint.com](http://www.cityofflint.com) or contact the Flint Water Department at 810-787-6537.

Here is the revised contract language for the Genesee County Health Department Flint water contract, \$425,000. Thank you!

## CHILDHOOD LEAD POISONING PREVENTION PROGRAM

### Child Elevated Lead Case Management

### SPECIAL REQUIREMENTS - REVISED

(Genesee County Health Department)

#### Purpose:

Grantee activities funded by the Department are expected to be focused on case management and intervention activities for children < age 6 identified with confirmed elevated blood lead levels ( $\geq 5$  ug/dL) since April 2014 and ongoing through FY2016. These funds are intended to augment, not replace, services billable to Medicaid. This is one time funding.

#### Funding requirements:

1. Funds may be used only for the following purposes:
  - a. Administrative support and data entry documentation/reporting for any services rendered under this contract.
  - b. For children insured by Medicaid, testing, nursing visits and case management services beyond those billable to Medicaid.
  - c. For children not insured by Medicaid, testing and all nursing visits and other case management services provided.
  - d. Funds may be used to provide Case Management services to residents of the City of Flint or Genesee County, for children who live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint.

#### Grantee Requirements:

1. Regular and ongoing Supervision will be provided by GCHD to all nurses providing services under this contract, with additional support available from the CLPPP Nurse as needed.
2. The CLPPP Case Management protocol will be utilized to assure comprehensive services.
3. All nurses providing services funded through this contract must participate in Lead Poisoning Prevention Case Management training prior to providing such services. Training will be coordinated and delivered jointly by CLPPP and GCHD Lead Nurse.
4. All nurses providing services funded through this contract must participate in training to use the Healthy Homes and Lead Poisoning Surveillance System (HHLPPSS) to appropriately document services rendered.
5. Grantee must bill Medicaid for services rendered to Medicaid-insured children, for the maximum amount possible. For specific information on Medicaid covered services, please refer to the Medicaid Provider Manual.
6. In providing case management services related to elevated blood lead levels dating back to April 2014, Grantee will utilize lists provided by CLPPP and contact and offer a full complement of case management services to:
  - a. Families of all children with capillary results of  $\geq 5$  ug/dL that have not yet been confirmed by venous blood draw.
  - b. Families of all children with venous results  $\geq 5$  ug/dL that are due for follow-up testing to monitor their lead levels.

7. Each child in the jurisdiction with a new blood lead level  $\geq 5$  ug/dL will be offered a full complement of case management services. Refer to Medicaid policy for an explanation of required services.
8. To the maximum extent allowed by law, nurses providing services funded through this contract will coordinate activities with EBL Investigators assigned to the same cases, including joint, coordinated home visits and exchange of information that supports each to carry out their duties in carrying out this public health activity.

**Required Reporting:**

1. On a weekly basis, Grantee will document all family contacts, case management activities, communications and Medicaid billing in the Healthy Homes and Lead Poisoning Surveillance System (HHL PSS), in a manner prescribed by the Department CLPPP.
2. Grantee must participate in a minimum of weekly review and status conference calls as scheduled by the Department CLPPP.

**Metrics for Contract Monitoring**

Contract monitoring will be based on data recorded in the Healthy Homes and Lead Poisoning Surveillance System (HHL PSS), Medicaid Claims data from the MDHHS data warehouse, and via weekly review and status calls.

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL for whom contact has been attempted.
2. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services.
3. Number and percentage of target children receiving case management services.
4. Number and percentage of target children receiving case management services residing in the City of Flint.
5. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits.

**Prohibited expenditures:**

1. Billable services for children insured by Medicaid.
2. Purchase of or distribution of water filters.
3. Childhood Lead Poisoning Prevention funds may not be used to fund other local public health operations.

**Attachments:** REVISED GCHD Contract.Flint water 11.18.15.changes.docx  
  
**Importance:** High

Per Sue's request, we have modified the contract language with GCHD related to Flint water, see attached. Changes are highlighted in yellow. We had a phone call with GCHD staff to review the changes before submitting. Karen will email them this copy as an FYI, and we will be revising our reporting form to align with the new metrics, will send them that form to them tomorrow.

Please let us know if you have any questions.

Nancy

**Subject:** Re: positions

Yes I did say Sherry is a nursing coordinator but that means something different at Genesee County than it does at MDHHS. She reports to Jori and will not be making any budgetary or programmatic decisions. She will be making sure she and the other nurses stay on focus and early on she was the only nurse we had who knew lead.

Toni LaRocco MS, RN  
Director of Nursing Services

Hi Nancy and Karen,

One of our nurses working in Lead Case Management came to us concerned that you might not know the roles of Genesee County staff in the case management realm. If you have questions regarding budget or contract issues, that should be brought to myself or Jori. If you have questions regarding clients that would go to Sherry, Kim or Jan. If there are concerns about implementation process please discuss with Jori. I hope this is helpful.

Thanks,  
Toni

# FLINT BLOOD LEAD LEVEL TESTING REPORT for week ending 11/13/2015

		A	B	C	D	E	F
	Target Population	# contacted and offered case management	% of total (A/X)	# of children receiving CM	% of total (C/X1) and (C/A)	# of Medicaid claims filed	% for whom Medicaid claims filed (E/C)
PRIORITY LEVEL 1	All children with elevated Capillary > 5 since April 2014 (total = 84)	3	4%	NA	NA	NA	NA
	All children with newly elevated Venous > 5 since April 2014 (total = 79)	0	0%	1	1.3%	1	100%
	All children with new elevated Venous ≥ 5 since October 2015 (total = 3)	2	67%	0	0%	0	0%
	All children with elevated Capillary > 5 since Oct 2015 (total = 5)	0	0%	NA	NA	NA	NA
	<b>TOTALS</b>						

\* this number will change weekly

**NOTES:** GCHD CM staff were in training all day 11/10, closed for holiday 11/11, and were at an outreach clinic on 11/12 for the afternoon away from the office. Note that children with capillary are not offered case management until result confirmed by venous sample, the 4% in column B represents number reached via phone. FYI-families may be contacted in one week, first home visit to open to CM may not occur in same week due to scheduling, etc. This information reflects activities for this week only.

Metrics included in contract

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services. A and B
2. Number and percentage of target children receiving case management services. C and D
3. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits. E and F

**Importance:** High

FYI -- follow up on my call today with Jori. Let's talk about this on Monday --

- I reviewed the updated contract language with Jori, as well as the revised reporting spreadsheet. She is going to review the reporting spreadsheet with the nurses, they are supposed to give feedback on the Tuesday call that you already have set up.
- I asked her about the numbers on the first report they sent you -- we don't know where they got the 163 number they listed. I can see that the totals they listed for rows 1 and 2 are not accurate (as measured by the list of families that Bob sends them) -- she is hopefully going to get back to me today regarding that number. Rashmi has asked about it, and my detective work so far with Bob hasn't helped us to figure it out. I do wonder if the text on the reporting form was part of the problem, so I tried to fix what I saw might be the problem. We'll see!

See you on Monday, hope it was a good (warm) weekend -- you left just in time for our first snow!

**Subject:** hoping to touch base about our reporting form

Hi Jori, I have a couple of questions pertaining to the reporting form we gave you – we need to update it to match the revised contract language, and I can see some other things that could be improved, would like to review those with one or more of you tomorrow, if possible. Karen is off for a family event, so it would be just me on our end. I could talk sometime tomorrow between about 9 and noon, or around 4pm. Would one of those times work for you?

If you could let me know, and send me your phone number, I would appreciate it!

Nancy

FLINT BLOOD LEAD LEVEL CASE MANAGEMENT, ORGANIZED BY TESTING PROTOCOL PRIORITY GROUPS

PRIORITY LEVEL 1	Target Population	A # for whom contact has been attempted	B % for whom contact has been attempted (Col. A / total for row)	C # successfully contacted and offered CM	D % of total % of attempted ( Col. C / total for row AND Col. C / Col. A)	E # of children receiving CM	F % of total % of contacted (Col. E / total for row AND Col. E / Col. C)	G # of children receiving CM who live in Flint	H % of CM in Flint (Col. G / Col. E)	I # of CM Medicaid claims filed	J % for whom Medicaid claims filed (Col. I / Col. E)
	All children with elevated Capillary > 5 from April 2014 – September 2015 (row total =75 )										
	All children with newly elevated Venous > 5 from April 2014 – September 2015 (row total = 76)										
	All children with new elevated Capillary ≥ 5 since October 2015 (row total = X*)										
	All children with new elevated Venous ≥ 5 since October 2015 (row total = X*)										
	TOTALS										

\* X will reflect the new, weekly numbers

Metrics included in contract (as amended 11.18.15):

1. Number and percentage of target children with elevated blood lead levels of ≥ 5 ug/dL for whom contact has been attempted.
2. Number and percentage of target children with elevated blood lead levels of ≥ 5 ug/dL that are successfully contacted and offered case management services.
3. Number and percentage of target children receiving case management services.
4. Number and percentage of target children receiving case management services residing in the City of Flint.

5. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits.

## **CHILDHOOD LEAD POISONING PREVENTION PROGRAM**

### **Child Elevated Lead Case Management**

### **SPECIAL REQUIREMENTS - REVISED**

(Genesee County Health Department)

#### **Purpose:**

Grantee activities funded by the Department are expected to be focused on case management and intervention activities for children < age 6 identified with confirmed elevated blood lead levels ( $\geq 5$  ug/dL) since April 2014 and ongoing through FY2016. These funds are intended to augment, not replace, services billable to Medicaid. This is one time funding.

#### **Funding requirements:**

1. Funds may be used only for the following purposes:
  - a. Administrative support and data entry documentation/reporting for any services rendered under this contract.
  - b. For children insured by Medicaid, testing, nursing visits and case management services beyond those billable to Medicaid.
  - c. For children not insured by Medicaid, testing and all nursing visits and other case management services provided.
  - d. Funds may be used to provide Case Management services to residents of the City of Flint or Genesee County, for children who live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint.

#### **Grantee Requirements:**

1. Regular and ongoing Supervision will be provided by GCHD to all nurses providing services under this contract, with additional support available from the CLPPP Nurse as needed.
2. The CLPPP Case Management protocol will be utilized to assure comprehensive services.
3. All nurses providing services funded through this contract must participate in Lead Poisoning Prevention Case Management training prior to providing such services. Training will be coordinated and delivered jointly by CLPPP and GCHD Lead Nurse.
4. All nurses providing services funded through this contract must participate in training to use the Healthy Homes and Lead Poisoning Surveillance System (HHPSS) to appropriately document services rendered.
5. Grantee must bill Medicaid for services rendered to Medicaid-insured children, for the maximum amount possible. For specific information on Medicaid covered services, please refer to the Medicaid Provider Manual.
6. In providing case management services related to elevated blood lead levels dating back to April 2014, Grantee will utilize lists provided by CLPPP and contact and offer a full complement of case management services to:
  - a. Families of all children with capillary results of  $\geq 5$  ug/dL that have not yet been confirmed by venous blood draw.
  - b. Families of all children with venous results  $\geq 5$  ug/dL that are due for follow-up testing to monitor their lead levels.

7. Each child in the jurisdiction with a new blood lead level  $\geq 5$  ug/dL will be offered a full complement of case management services. Refer to Medicaid policy for an explanation of required services.
8. To the maximum extent allowed by law, nurses providing services funded through this contract will coordinate activities with EBL Investigators assigned to the same cases, including joint, coordinated home visits and exchange of information that supports each to carry out their duties in carrying out this public health activity.

#### **Required Reporting:**

1. On a weekly basis, Grantee will document all family contacts, case management activities, communications and Medicaid billing in the Healthy Homes and Lead Poisoning Surveillance System (HHLPPS), in a manner prescribed by the Department CLPPP.
2. Grantee must participate in a minimum of weekly review and status conference calls as scheduled by the Department CLPPP.

#### **Metrics for Contract Monitoring**

Contract monitoring will be based on data recorded in the Healthy Homes and Lead Poisoning Surveillance System (HHLPPS), Medicaid Claims data from the MDHHS data warehouse, and via weekly review and status calls.

1. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL for whom contact has been attempted.
2. Number and percentage of target children with elevated blood lead levels of  $\geq 5$  ug/dL that are successfully contacted and offered case management services.
3. Number and percentage of target children receiving case management services.
4. Number and percentage of target children receiving case management services residing in the City of Flint.
5. Number of Medicaid claims filed for children enrolled in Medicaid who receive testing or nursing assessment visits.

#### **Prohibited expenditures:**

1. Billable services for children insured by Medicaid.
2. Purchase of or distribution of water filters.
3. Childhood Lead Poisoning Prevention funds may not be used to fund other local public health operations.

**To:** Travis, Rashmi (DHHS)  
**Subject:** RE: talking points on case management & environmental investigations/composite with a couple bullets from Wes

Hi Rashmi -- regarding the 163 number you asked me about -- I've been on the phone with GCHD several times today.

If we take their report they sent to Karen on 11/18, it captures information about 171 families. That matches the total number on the list that Bob sent them for that time period. So that is good!

I can see now where the 163 number came from. It is the total of 2 rows from our reporting form, but didn't include the other two rows listed on the table, that's the difference.

In reviewing the report GCHD sent us, and in looking at the numbers on it, Karen and I realized that we needed to clarify some of the instructions, as they caused confusion on the GCHD end. We have subsequently added more detail, and have shared it back to GCHD to review, give us feedback next Tuesday.

Nancy

Ok thanks. I'm sending to Linda Dykema to verify with the figure she may have because it was a higher figure at one time.

Linda,  
See Nancy's notes below on the 163 EBL investigations. At one time, you had a different figure based on your analysis. Can you verify what figure you have.

Thanks,  
Rashmi

**Subject:** RE: talking points on case management & environmental investigations/composite with a couple bullets from Wes

The 163 number came off of the GCHD Case Management reporting sheet they sent to us this week.

I'm not sure where they got that number. I have to call and clarify with them tomorrow (Karen is away for a family event).

Bob has 151 for the April 2014 -- September 2015 dates.

Updates to his list are as follows (not sure about prior to 10/26):

Total of 162 as of 10/26/15

Total of 166 as of 11/2/15

Total of 171 as of 11/9/15

Total of 180 as of 11/16/15

I can see some improvements we need to make to our CM reporting sheet, perhaps the form contributed to confusion on numbers? Will find out tomorrow.

Sorry I don't have a resolution for you tonight. All I can suggest is to go with the 163 for now, and we'll have it cleared up for next week -- I'm OK with that because if anything, the 163 number is too low, not too high (e.g. it will go up next week, not down).

I say this is good to send to Eden and Geralyn. The two experts, Wes and Nancy, provided the material that we summarized. Thoughts?

**I think these would be some brief talking points for Eden and/or Geralyn:**

The governor signed the legislation for funding on Oct. 15<sup>th</sup>.

Contracts for Case Management were negotiated and in place by Oct. 23<sup>rd</sup>; a contract for environmental investigations was executed on 10/29/15.

GCHD hired 2.5 staff and trained them by Nov. 10<sup>th</sup>; staff have begun to contact families and offer/conduct case management services.

The Nurse Case Managers have met with, and developed plans to coordinate efforts with, the Environmental Investigators, and will be making joint home visits whenever possible.

There are 163 children with elevated blood lead levels reported since April 2014. Staff just started, but have reached 5 families to offer case management, and have conducted case management on one of those cases (as of 11/13/15). Outreach to additional families is already underway. 2 EBL

investigations have been conducted as of 11/19/15; environmental investigators also do water sampling.

We expect these numbers to grow in the coming weeks.

**Attachments:** FLINT BLOOD LEAD CM - weekly status tracking form v3 11.23.15.xls.xlsx

Hi Jori -- see attached file -- in an Excel spreadsheet as you requested. The red numbers are only there to test the formulas I entered for the first two rows -- not based on reality at all. Just replace those as you use the form. I didn't program the last two rows, as I don't have the data needed to do that (e.g. the running weekly total).

I think we only want column totals for the # columns; I blocked the cells where we don't need column totals. We don't need row totals.

Let's try using the test date, see how that works.

Nancy

Nancy-

Do you want running totals? That wasn't clear in your reply.

I suppose that it depends on what you want for numbers; to me it makes sense to have the test date. Aren't you wanting to know the lead test results of those that were drinking the water before the switch back to Detroit???

**Subject:** Re: hoping to touch base about our reporting form

Hi Jori - thanks for sending feedback. We'll have the Excel spreadsheet for you tomorrow (Tuesday).

Regarding your questions -

- I think the Word document had totals for each column. I agree, that the 'X' in rows 3 and 4 will change each week as any new results come in, and as Bob adds to the list.
- Thanks for catching the > 5 - you are correct, it should be  $\geq 5$ .
- We were thinking data would be based on when data was added to Bob's lists; what would work best for you?

Nancy

**To:** Peeler, Nancy (DHHS)  
**Subject:** RE: hoping to touch base about our reporting form

Nancy-

Regarding the updated reporting form:

- Do you want running totals for all rows and columns? This means that the "X" will change each week dependent on the list received from Bob and any results we receive ahead of being put on his list.
- The top 2 rows, should the results show as  $\geq 5$ ? Currently, they are just > 5.
- Do you want data entered into the columns dependent on the date the test was done or the date the result was added to Bob's list?

Please clarify.

Thank you,  
 Jori

**Subject:** 1pm call with GCHD about Flint - lists of children and contract reporting  
**Attachments:** FLINT BLOOD LEAD CM - weekly status tracking form v3 11.23.15.xls.xlsx

Hi Bob and Martha, we have a 'status' call with Genesee Health Department staff at 1pm, and I believe that the lists of children Bob is sending them will come up related to our reporting sheet. I think it could be helpful to have Bob participate. Bob, is there any chance you could join the call with us? If yes, Karen and I can dial your phone to conference you in.

**Sent:** Tuesday, November 24, 2015 4:42 PM  
**To:** Peeler, Nancy (DHHS)  
**Subject:** RE: Physician resources regarding Flint water

Hi Nancy- Would you also be interested in us sending some messaging to providers who are enrolled in FFS Medicaid about this? We have e-mail addresses for around 90% of our enrolled providers, so we could easily send out an e-mail blast on this, or if you'd rather, send you the file for your own messaging. We don't usually share provider contact information outside MSA, but this is probably a good reason to do so. Let me know what you think. Thanks Nancy. Pam

**Subject:** Physician resources regarding Flint water

Good afternoon, everyone -- as part of the MDHHS Action plan regarding Flint water, we wanted to share with you the attached Provider letter, with several resource documents that accompanied the letter. The letter was distributed by email to local Physicians on October 30<sup>th</sup>, by the Genesee County Health Department.

For our colleagues in Medicaid, could we please ask your assistance in sharing the Provider letter and resources with your contacts at the Medicaid Health Plans that currently or will be working in Flint and Genesee County, and the surrounding areas? In turn, it would be helpful if the plans could share these with their enrolled providers. We want to assure that the materials reach any providers who may be seeing Flint families and their children. These materials are also available at the following website: [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater)

Many thanks for any assistance you can give with distributing these materials. Please share any questions you have, or you receive, with Rashmi and I.

Nancy

**Subject:** RE: Physician resources regarding Flint water

Hi Pam -- thank you, that would be great, we really appreciate any help in getting information out to the Flint area physicians. It's fine if you send the message, it doesn't need to come from us necessarily, but we're happy to help co-author if that would help you. Either way! Also, there is a new letter from WIC going out to Providers, we may want to see if we can get that into your hands as well -- I've copied Rashmi Travis on this email as she has access to the newer WIC information.

Nancy

## **Talking Points for WIC Staff regarding Lead in Flint Water**

The following examples address some common client concerns related to lead in the drinking water supply. These examples are meant to provide some consistent language to support a client-centered approach, and foster further client-staff dialogue.

This discussion can be tailored around the ‘*Explore, Offer, Explore*’ process.

*Explore...Explore what the client knows, or would like to know*

*Offer...Offer information in a neutral, nonjudgmental manner*

*Explore...Explore about the client’s thoughts, feelings, and reactions*

### **Focus: Infants and Ready to Feed Formulas**

#### **Concern: What formula would be best for my infant if I’m unsure of the safety of my water?**

[Staff Note: Determine if client has access to safe water, and take lifestyle factors into consideration.]

**Answer:** *It sounds like you’re worried about providing your child with safe water. May I offer some suggestions around formulas that might help you decide what is best for your family?*

- Tell me about your water and how you use formula now.
- Tell me more about your lifestyle.
  - Are you constantly on the move with limited access to refrigeration throughout the day?
  - Do you stay home most of the time and have a reliable refrigerator available?
  - Do you have a car to get to the store, or do you walk when carrying your groceries?
  - Do you buy your formula all at once, or do you make several trips to the store for formula throughout the month?

#### *Using RTF Formulas:*

- RTF Formulas require no mixing or dilution.
- Unopened cans/bottles can be stored at room temperature.
- Once the bottle/can is opened, unused portions must be refrigerated immediately, and used within 48 hours.
- These bottles can be heavy because the water is already mixed in.
- Depending on demand, many smaller stores may have difficulty keeping RTF formula on the shelves. You may want to call your store to check their supply before you go.

#### *Using Powdered Formulas:*

- Powdered formulas require simple, standard mixing and measuring.
- Mixing directions for powdered formulas are designed to be easy to remember and do:  
Add 1 (unpacked/level) scoop of formula to every 2 fl oz of water.
- You **MUST** have safe water to do the mixing.

- After mixing the formula, you can either feed your child immediately, or store in the refrigerator for up to 24 hours.
- With powdered formula though, you **MUST** use safe water to do the mixing.

*Additional Client Considerations:*

- Another thing to keep in mind is that WIC is a supplemental food program, and will likely not provide all the formula your baby will need for the month.
- You may need to purchase some formula to complete the month.
- Powdered formula is the least expensive option, while RTF formulas are most expensive.

*What can you tell me about your family's lifestyle that might help make this decision?*

**Concern: Is Ready to Feed formula more nutritious than powdered formula?**

**Answer:** *It's great you are concerned about your child's nutrition. I'm happy to share some information regarding the health benefits of both.*

*All Formula Provides the Same Nutrients:*

- All formula types (both RTF and powder) contain the same amount of nutrients.
- Your baby will receive the same nutrition regardless of which formula type you receive.
- RTF already has the water mixed in with the formula; with powder, you need to add the water.

*After hearing this, please tell me more about any other of your nutrition concerns.*

**Concern: Will I still get the same amount if I choose one formula over another?**

**Answer:** *It's wonderful you want to get the most benefit from WIC. May I share some information about the different formulas?*

- USDA provides guidelines on the amount of formula an infant receives from the WIC program.
- RTF is most commonly available in 32 ounce bottles or cans. This is approximately the same size as a quart of milk. Because the water is already mixed in, the number of cans or bottles of RTF would be higher than the number of cans of powder (i.e., IFF on Enfamil Infant will initially receive 9 cans of powder v. 26 cans of RTF per month).
- No matter what type of formula you choose, your infant will receive a comparable amount of nutrition regardless of the option you choose.

*What are your other concerns about the amount of formula you will receive?*

**Concern: Where can I get RTF formulas?**

- Check with your WIC clinic staff – or the store directly – to ask about availability in your local stores.
- Please know that there may be fluctuations in store availability due to constant changes in supply and demand.

## **Focus: General Lead Concerns**

### **Concern: My family may have been exposed to lead. What should I do?**

**Answer:** *Many families have similar concerns. Please tell me more about the potential lead exposure.*

*WIC clients who may have been exposed to lead.*

- Symptoms of lead poisoning can be hard to recognize.
- Families (especially infants and children, and pregnant women, women planning to become pregnant, and breastfeeding mothers) who live in the City of Flint, live in a home using City of Flint water, or who attend school, childcare or often spend time with a caregiver in the City of Flint, should be tested *as soon as possible*.
- The best place to get a blood lead level test is your doctor's office. Tests are covered by most health plans.
- Your doctor will follow up with you on lab tests and provide you with information on what to do next.
- Your family can also get a free lead test here at the Health Department. Call 211 for any transportation help needed.

*I have a handout specific to the water situation in Flint that other families have found helpful; would you like to take one?*

Publication: [http://www.michigan.gov/documents/lead/2015-10-21\\_-\\_Lead\\_-\\_Flint\\_Water\\_FINAL\\_1\\_504859\\_7.pdf](http://www.michigan.gov/documents/lead/2015-10-21_-_Lead_-_Flint_Water_FINAL_1_504859_7.pdf)

### **Concern: My family doesn't live in the affected Flint zip codes, yet I'm still worried. What can we do to prevent lead poisoning?**

*Many families have come in with the same concern. It's great you are being proactive in regards to your family's health. There are things you can do to decrease the risk of lead poisoning.*

- Good nutrition can help.
- Keep your child's belly full by having him/her eat healthy foods containing iron and calcium. This may help to keep lead out of your child's blood.
- Eat iron-rich foods with vitamin C-rich foods for better absorption.
- Iron-rich foods: lean red meats, beans, peanut butter, whole grains, enriched breads and cereals
- Vitamin C-rich foods: Oranges, strawberries, broccoli, bell pepper, juice
- Calcium-rich foods: milk, yogurt, cheese, green leafy vegetables like spinach

- Eating three meals, and 2-3 snacks each day is also important, as an empty stomach absorbs more lead than a full stomach.
- Use filtered water for washing fruits and vegetables, cooking and drinking.
- If you are concerned about your family's diet, talk with your doctor who may also recommend a daily multivitamin.
- Eating healthy foods, in addition to using some safety practices in your home, can help to decrease your family's exposure to lead.

*I have a handout that lists these safety measures. Other families have found it helpful; would you like one as well?*

MDHHS Parent Handout 'Is my child safe from Lead?':

[http://www.michigan.gov/documents/lead/Parent\\_Handout\\_Sept2015\\_501802\\_7.pdf](http://www.michigan.gov/documents/lead/Parent_Handout_Sept2015_501802_7.pdf)

### **Moving Forward**

Any contact with participants is an opportunity to educate them on lead exposure and/or prevention, including informing them of all infant formula options available to them, as well as providing referrals for all family members who may also be affected. This can all be done while reinforcing the additional services provided by WIC.

It might be important to assess the family's water filter use and understanding. It might help to inform them that the water filter will not last forever and replacements are available for free.

November ~~xx~~, 2015

Dear Provider,

As noted in the provider letter dated October 30, 2015, elevated levels of lead have been found in lead pipes within the City of Flint's water system.

To help further protect the children of Flint from the current lead in water exposure, the Genesee County Health Department and the Michigan Department of Health and Human Services are providing answers to the following questions about infant formula:

- What can be done for formula fed infants who do not have safe water?
- Does WIC provide Ready-To-Feed (RTF) infant formula?
- How can WIC clients obtain RTF formula?
- What else do I need to know about WIC or RTF formula?

**What can be done for formula fed infants who do not have safe water?**

Flint residents whose water safety is questionable may safely reconstitute infant formula with properly filtered or bottled water, or use Ready to Feed (RTF) formula. A few facts about RTF formula are noted below.

- RTF Formulas require no mixing or dilution.
- Unopened cans/bottles can be stored at room temperature.
- Once the bottle/can is opened, unused portions must be refrigerated immediately, and used within manufacturer-specified time frame (usually 24-48 hours).
- These bottles can be heavy because the water is already mixed in.

**Does WIC provide Ready-To-Feed (RTF) infant formula?**

Yes, RTF infant formula can be provided by the WIC Program to clients who do not have a safe or sufficient water source to reconstitute powder or concentrate infant formula. The WIC nutritionist is prepared to work with clients on an individual basis to assist in assessing the most appropriate formula type. This assessment will take into consideration important lifestyle factors to ensure the infant has access to not only safe formula, but adequate nutrition. For example, a mother accustomed to feeding her infant 'on-the-go' (without access to refrigeration) may prefer the convenience of powder formula reconstituted with bottled water. Attached are sample talking points used by WIC nutritionists in helping determine the best formula choice. These topic areas may be helpful for providers to explore with clients as well, if similarly assessing for best formula choice.

For WIC clients (including children) receiving non-standard formulas, RTF availability may vary by product/manufacture. The WIC clinic can assist clients and providers with assessing options in these cases too.

**How can WIC clients obtain RTF formula?**

WIC clients can obtain RTF formula by contacting the Genesee County WIC Program. In addition to working with WIC clients to determine the most appropriate formula type, WIC staff are able to void and issue new food benefits. Once benefits are issued, clients use their WIC EBT card to redeem formula at authorized WIC retailers. Because there may be fluctuations in store availability of RTF formula due to constant changes in supply and demand, it is suggested that clients work with the WIC clinic staff to ensure access to this less commonly used/stocked product.

### **What else do I need to know about WIC or RTF formula?**

It is important for clients transitioning to RTF formula to understand appropriate usage. The WIC nutritionist is prepared to educate clients that they should NOT add any water to RTF formulas, and that RTF formula, unlike powdered formula, must be refrigerated once the bottle/can has been opened. The attached nutrition education flyer was developed for use with WIC clients to help reinforce these messages. It may also be used by your office or staff as needed (note: it is WIC product-specific, and may not be appropriate for use with non-WIC clients).

Additional information to keep in mind:

- All formula types (RTF, powder, concentrate), once prepared according to manufacturer directions, contain the same amount of nutrition.
- Formula packaging differs by product type. Shopping location, frequency and transportation are important considerations. WIC nutritionists can assist in educating clients regarding what to expect, and reassuring mothers that regardless of the option selected and difference in number of cans, their infant will receive a comparable amount of nutrition from their WIC benefits.
- Recall that WIC is a supplemental food program, and may not provide all the formula needed by the infant in a given month. WIC clients may need to purchase additional formula with their own funds. RTF formula is the most costly formula type, and is significantly more expensive than purchasing powder formula with bottled water for reconstitution.

No. We are just trying to get it in the hands of Flint providers. It is not being widely advertised about Ready to Feed. Other WIC agencies are proceeding as usual, without anyone asking about Ready to Feed, so we don't want to put it out on the website and confuse others.

**Subject:** RE: Physician resources regarding Flint water

Hi Pam -- thank you, that would be great, we really appreciate any help in getting information out to the Flint area physicians. It's fine if you send the message, it doesn't need to come from us necessarily, but we're happy to help co-author if that would help you. Either way! Also, there is a new letter from WIC going out to Providers, we may want to see if we can get that into your hands as well -- I've copied Rashmi Travis on this email as she has access to the newer WIC information.

Nancy

Hi Nancy- Would you also be interested in us sending some messaging to providers who are enrolled in FFS Medicaid about this? We have e-mail addresses for around 90% of our enrolled providers, so we could easily send out an e-mail blast on this, or if you'd rather, send you the file for your own messaging. We don't usually share provider contact information outside MSA, but this is probably a good reason to do so. Let me know what you think. Thanks Nancy. Pam

**Subject:** Physician resources regarding Flint water

Good afternoon, everyone -- as part of the MDHHS Action plan regarding Flint water, we wanted to share with you the attached Provider letter, with several resource documents that accompanied the letter. The letter was distributed by email to local Physicians on October 30<sup>th</sup>, by the Genesee County Health Department.

For our colleagues in Medicaid, could we please ask your assistance in sharing the Provider letter and resources with your contacts at the Medicaid Health Plans that currently or will be working in Flint and Genesee County, and the surrounding areas? In turn, it would be helpful if the plans could share these with their enrolled providers. We want to assure that the materials reach any providers who may be seeing Flint families and their children. These materials are also available at the following website: [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater)

Many thanks for any assistance you can give with distributing these materials. Please share any questions you have, or you receive, with Rashmi and I.

Nancy

On Nov 24, 2015, at 4:37 PM, Peeler, Nancy (DHHS) <[PeelerN@michigan.gov](mailto:PeelerN@michigan.gov)> wrote:

Per your request, a quick update on the child in Flint with the EBL.

GCHD Nurse visited the family this afternoon; it is an older home with wood windows and doors. The nurse reported clear evidence that this child is chewing on surfaces such as windows and furniture, lots of mouthing behaviors. They have lived there for 6 years. The nurse worked with the Mom to identify potential sources of lead exposure, gave her a cleaning kit, and took steps to put in place protections/barriers to accessing the various surfaces. ETC will be conducting their EBL investigation (and water sampling) on 11/4/15, and can take out more supplies as needed. The home has had a water filter in place for the past month.

The child is already connected with WIC, Infant Mental Health, and Early On. He is reportedly being evaluated for autism, a diagnosis shared with his brother(s).

Medically, he is anemic, and Mom reports he has a poor diet. He will be seen for follow-up at the Children's Hospital (Detroit) lead clinic on 11/30/15 (Dr. Bhambhani). His PCP is Dr. Mustafa Akpinar.

Dr. Akpinar had ordered the blood test, and had sent the family to Children's on 11/18/15 based on the level of 51.7 V. Children's admitted the child late Wednesday

night, retested and had a level of 36 V, abdominal x-rays were negative, so they did not chelate and sent him home on Friday.

We'll share more as we learn more, likely later next week.

Nancy

## Flint Water Lead Project

### Michigan Department of Health and Human Services Situation Report for December 2, 2015

**\*\*NOTE: Contains potentially Identifiable Information- REDACT AS INDICATED\*\***

**New items for the day listed first and in bold print.**

**Daily Briefing and Situation Report** prepared by Linda Dykema

**Surveillance Indicators:** People Tested since 10/1/2015: 1,361;

Children less than 6 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 15

Children 6 to 17 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 6

Adults 18 years and older  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 9

**Severity Indicators:** Hospitalized/Discharged-1/1; Deaths- 0

#### DAILY ACTIVITY SUMMARY

**Elevated Blood Level (EBL) Environmental Investigations** – ETC Contractors, Wes Priem, Courtney Wisinski

- **3 EBL investigations completed.**
- 8 investigations scheduled.
- The high EBL home is scheduled for Friday 12/4/15.

**MDHHS/Genesee County Health Department (GCHD) Case Management (CM) Services** – Nancy Peeler

- CLPPP Nurse has maintained contact with GCHD nurses regarding hospitalized child with EBL of 52  $\mu\text{g}/\text{dl}$ . GCHD Nurse reports that the child's lead level has decreased to 20  $\mu\text{g}/\text{dl}$ .
- Received calls from Rep. Neely's office regarding an upcoming Health Fair, asking about CLPPP participation or provision of materials (may be on December 15th at a Methodist church?). Suggested that GCHD staff as their best contact: shared with GCHD as they may receive a call.
- CM report through 11/25/15:
  - # of contacts attempted: 136
  - # offered CM: 46
  - # CM started: 5
  - # of children receiving CM who live in Flint: 5
  - # billed to Medicaid: 5
  - # Other disposition: 2 (2 children moved to Oakland County)

**Epidemiology/Surveillance** – Patti McKane, Martha Stanbury, Bob Scott, Jessica Cooper, Karen Lishinski

- Established protocol for notifying HHS staff and GCHD about Flint EBL children. Master list will be compiled on Monday and HHS staff and GCHD who will track their CM activities re these children and report back to HHS on Friday.

**Filter Distribution** Sheryl Thompson

- |                                |   |
|--------------------------------|---|
| • <b>November Distribution</b> | • <b>Total Distribution since October 1, 2015</b> |
| ○ 778 Filters                  | ○ 10,951 Filters                                  |
| ○ 63 Pitchers                  | ○ 184 Pitchers                                    |
| ○ 924 Replacement Filters      | ○ 924 Replacement Filters                         |

#### **Communications/Information Sharing** – Linda Dykema, Eden Wells

- Linda Dykema received call from Dr. Mark Johnson, ATSDR R5 Senior Regional Representative and CDC main point of contact. Provided an update on HHS activities.
- Wes Priem attended a Michigan Community Development Directors' conference on housing where he talked with Susan Wilcox, Manager for Flint Community and Economic Development Program. She will schedule a meeting with HHS staff to discuss application of the Landlord Penalty Law in city of Flint.
- Weekly (Tues. 8:00 am) coordination call with DEQ/LARA/HHS. Discussed need for informational materials for schools/residents regarding lead free plumbing replacements.
- Technical Advisory Committee meeting originally scheduled for December 9<sup>th</sup> - , then postponed by City of Flint, may actually take place: awaiting word from City.

#### **Health Education Resources Updates** - Michelle Bruneau, Emily Houk

- Met with Liane Shekter-Smith (MDEQ), Steve Busch (MDEQ), Kory Groetsch (MDHHS), and Jennifer Gray (MDHHS) to discuss Phosphate Fact Sheet; changes forthcoming
- Coordinating meeting with GCHD and MDHHS to discuss phosphate dosing and potential health implications
- Sent out draft of "Bath Time" fact sheet to MDHHS and GCHD for review reiterating that it's safe for adults and children to bathe in Flint tap water; requested quote via Eden from Dr. Mona Hanna-Attisha
- Continuing to write and coordinate additions to the EBL Case Manager Binder, now known as the MDHHS Lead Safe Family Guide Book.
- Pending: Aerator/Filter Maintenance Fact Sheet; Flint Parent Letter re-do in partnership with Emily Houk.

#### **Toxicology** - Kory Groetsch, Jennifer Gray, Lisa Quiggle

- Working with GCHD and DEQ to address questions concerning impact of phosphate treatment on drinking water filters.
- Working with Healthy Homes Section staff to revise EBL report for Flint Residents.

#### **WIC**

- Letter sent 11/24 to GCHD about Ready-to-feed formula availability from WIC program
- Talking points for WIC staff and for providers shared

#### **Healthcare/Providers**

- Moran, Wells and Miller met with Medicaid health plan staff 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs and suggested inviting Dr. Wells to speak to Medicaid health plan medical directors.
- Medicaid identified three individuals to partner with epidemiology staff to develop methodology to measure/report progress on the percentage of Flint children enrolled in Medicaid who receive EBL testing.
- Forum for primary care providers in Flint POSTPONED pending coordination with local providers
- WIC information to be shared by GCHD to providers

**DEQ Information** - Linda Dykema as Liaison

- MDEQ would like to issue school drinking water testing results in coordination with MDHHS release of the blood lead test reporting.

**Subject:** FOR IMMEDIATE RELEASE: MDHHS releases latest data outlining blood lead levels in Flint; Follow-up care, case management resources continue for families

## Press Release

---

**FOR IMMEDIATE RELEASE:** December 3, 2015

**CONTACT:** Jennifer Eisner, (517) 241-2112

**MDHHS releases latest data outlining blood lead levels in Flint**  
*Follow-up care, case management resources continue for families*

LANSING, Mich. – Preliminary data indicates that 30 of 1,361 adults and children tested in Flint since October 1 had elevated blood lead levels, according to a report issued today by the Michigan Department of Health and Human Services.

This marks the first summary report on lead testing called for in the state's action plan related to health concerns about Flint's water infrastructure.

"Our goal is to help families reduce their exposure to lead sources," said Dr. Eden Wells, MDHHS chief medical executive. "We have made progress in testing and identifying those with elevated blood lead levels, and the department will continue to work closely with the Genesee County Health Department to reach these families. We will remain diligent in our ongoing outreach and education efforts."

Information comes from tests administered citywide to 1,361 children and adults since October 1. Tests showed that 21 of 969 children age 17 or younger and 9 of 392 adults over the age 18 were identified with elevated blood lead levels.

The report covers test results reported to MDHHS since the state action plan was put in place Oct.

2. It includes the number of tests and number of elevated blood lead levels greater than 5 micrograms per deciliter, and captures both capillary and venous blood tests that have been reported to MDHHS since the beginning of October. People who have had multiple tests are counted only once. Five micrograms per deciliter is the level that the Centers for Disease Control and Prevention considers elevated and triggers health care professional follow up with families.

The full report is posted online at [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater) and will be updated as more data becomes available.

When reviewing historical trend data, the risk of lead exposure is highest during the third quarter of each year – July through September. Seasonal variation is the result of a number of factors including increased exposure to lead in dust and soil in the summer months.

In the third quarter of 2010, 8.3 percent of Flint children 6 and under showed elevated blood lead levels. The figure gradually decreased to 4.1 percent in the third quarter of 2013. During the same months in 2014, the figure increased to 7.5 percent and decreased to 6.4 percent in the third quarter of 2015.

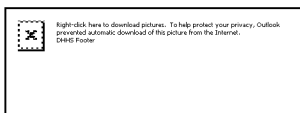

Last month, MDHHS collaborated with the county health department and local partners to distribute educational resources and informational letters to Flint parents regarding lead testing. The state is providing funding for GCHD nurses to work with families when an elevated blood lead level has been detected. During these follow-up visits, nurses coordinate with environmental health investigators to meet with families in their homes to identify lead exposures, address questions and provide water filters. People can be exposed to lead from paint, soil, plumbing and other sources.

MDHHS continues to provide free water filters and replacement cartridges to Flint residents at four locations, including the MDHHS Flint offices and the Genesee County Community Action Resource Department. For a full list of locations and hours of distribution, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its [YouTube channel](#). For updates, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

## Michigan's Case Management Protocol for Children with Elevated Blood Lead Levels in Flint, Michigan

## Section 1: Application of this Protocol

The State of Michigan's childhood lead poisoning elimination goal is to identify and provide appropriate follow-up services to all children with Elevated Blood Lead Levels (EBLLs) in order to support their continued health and safety.

To meet this goal, case management services should be performed for children with BLLs  $\geq$  5ug/dL as determined by a venipuncture test.

### Origin

This document represents a standard of care as prescribed by the United States Centers for Disease Control and Prevention (CDC), the American Academy of Pediatrics (AAP), Michigan state law and Medicaid. This document contains case management guidelines developed by the Nursing and Health Support component of the Michigan Department of Health and Human Services Childhood Lead Poisoning Prevention Program (CLPPP).

## Section 2: Expectations

Desired outcomes of EBLL case management include:

- Reducing an elevated blood lead level below the current CDC reference value of  $\geq$  5 ug/dL;
- Evidence that communication has occurred between caregivers and other service providers to ensure the child's continued health and safety;
- Evidence and assurance that appropriate action has been taken by case managers as required by this protocol.

### Section 3: Required Activities

Activities defined by Medicaid, the CDC and AAP as encompassing case management include:

- Client identification and outreach
- Individual assessment and diagnosis
- Service planning and resource identification
- Linking clients to needed services
- Service implementation and coordination
- Monitoring of service delivery
- Advocacy
- Evaluation

#### 1. Client Identification and Outreach

Case managers must continually review the list of EBLs  $\geq 5\text{ug/dL}$  provided on a weekly basis by the MDHHS Surveillance Manager. Case managers must contact and offer case management services to these families based on the schedule below. Outreach efforts must be deliberate, ongoing and varied in order to ensure that contact with families is made.

All outreach activities must be documented in activity logs and the HHLPP system.

##### a. Schedule

The following schedule must be used when initiating initial in-home nursing visits:

- BLL 5-14 within 2 weeks of referral;
- BLL 15-44 within one week of referral;
- BLL 45+ within 48 hours of referral;

##### b. Fees for Services

Medicaid provides reimbursement for the following in-home visits related to a venipuncture EBL  $\geq 5\text{ug/dL}$ :

- Two Environmental Investigations (One initial and one alternative location as needed)
- Two Blood Lead Nursing Assessment Visits (two in-home visits)

#### 2. In Home Visits

##### Nursing Assessments Overview

Nursing Assessment visits must be provided in the child's home. The objectives of the first home visit are:

- **Individual assessment and diagnosis** through a health, development, social and

dietary history for the affected child and identification of the possible sources of lead in the child's environment.

- **Development of a Plan of Care** that identifies resources specific to the individual child and family so that exposure is reduced, appropriate referrals and recommendations can be implemented, and the impact of lead exposure minimized.
- **To provide education and anticipatory guidance for caregivers** so that the effects of exposure are minimized
- **To advocate for families** to ensure they receive the appropriate support for managing their child's exposure through community referrals and resources; and
- **To ensure that the Individualized Plan of Care is continually reevaluated** until the child's lead level is below the current CDC reference value of 5ug/dL.

The initial visit will focus on:

- Assessment of the growth and development of the child, including any symptomology that may be present in the child (refer to Initial Home Visit assessment form for a list of common symptoms)
- Behavioral assessment of the child including any aggressive and/or hyperactivity
- Nutritional assessment of the child
- Assessment of typical family practices that may produce lead risk (e.g., hobbies, occupation, cultural practices)
- Limited physical identification of lead hazards within the dwelling
- Identification and planning for testing of any other family member at risk for lead hazard exposure
- Education and information regarding lead hazards and ways to minimize those risks in the future
- Development of a family plan of care to increase the safety of the child from lead hazards
- Facilitating blood lead follow-up testing and treatment recommended by the PCP.

#### a. First visit activities

The purpose of the initial nursing assessment home visit is to gather sufficient information to develop an Individualized Plan of Care for the child with an EBLL and to ensure that all siblings and pregnant women in the household are identified for further screening. The child with EBLL must be present at the initial visit for a physical assessment and observation of his/her behavior. During the initial visit, the following must be accomplished:

- Obtaining Caregiver authorization to release protected health information to the case management team and to referral sources as needed using the MOCH HIPAA Authorization to Disclose Protected Health Information Form or any other

agency-developed disclosure form.

- Discuss possible sources of lead exposure:
  - Lead Paint (walls, doors, windows, furniture)
  - Child's toys or common household items
  - Cultural foods, cookware or other items
  - Parent occupation
  - Lead in water or pipes
  - Other
- Interview of the child's caregiver(s) to collect the child's health, social and nutritional history. (Refer to the Initial Nursing Visit form).
  - Obtaining a health history that addresses the current health status of the child, including:
    - Past history of lead testing and, if necessary, chelation for the child;
    - Past history of lead testing for other family members;
    - Child's history of anemia (if any); ask caregiver to relate information re: the child's hemoglobin status;
    - Caregiver's observations about the child's developmental progress;
    - Caregiver's assessment of the child's behavior;
    - Caregiver's assessment of the child's cognitive development;
    - A visual/physical assessment of the child's body systems including eyes, heart and lungs, abdomen/digestive, elimination, muscular and skeletal;
    - Performing a standardized developmental screening to provide a baseline for the future (ASQ).
    - If the child is already enrolled in Early On or Special Education, you may instead obtain parent consent and request the evaluation assessment results from Early On or Special Education.
  - A complete nutrition history for the child including the following:
    - Caregiver's description of the child's usual diet pattern. This should begin with a twenty-four hour recall of his/her intake and ask if this is typical of the child's intake.
    - Ask about child's intake of breast milk, formula and/or cow's milk;
    - Ask about child's intake of other dairy/calcium sources;
    - Ask caregiver about child's intake of iron-containing foods and dietary fat;
    - Inquire about ethnic food products imported or carried from another country;
    - Ask about dietary supplements;
    - Ask caregiver the number of meals and number of snacks the child consumes each day; and
    - Ask where the child sits to eat.
  - A social history for the child including:

- Caregiver's description of play and sleep habits;
  - A child's usual play area;
  - Environments other than the child's primary residence where the child spends 20 hours per week or more (address and caregiver name(s));
  - Family occupational and hobby history: include occupations and hobbies of adults in the home and other adults with whom the child spends time;
  - Cultural practices or foods in use by the immediate family as well as other adults with whom the child spends time;
  - Behavior: ask the caregiver about mouthing/hand-to-mouth behaviors (to be expected in young children), including fingers in mouth; chewing on toys, crayons, newspaper/other print material, matches; consumes non-food items, such as dirt, grass, cigarettes/ashes; chews on furniture? crib/playpen? window sills/frames/doors?; plays at or near chipping or flaking paint, or has been seen eating paint chips.
- Documentation of other information including:
  - Family income source
  - Whether the family receives: WIC, food stamps, Medicaid/Medicare, other support, such as a food pantry.
  - If the residence is a rental property: name, address, phone number and/or other contact information for the rental property owner.
  - Barriers to obtaining medical care: time, both amount of time needed and time of day, child care, transportation, literacy, language barrier, etc.

After the child's history is completed, ask the caregiver for permission to look around the child's common areas for visual evidence of exposure sources, exposure behaviors and family practices.

The Individualized Plan of Care and Referral forms should be completed after reviewing the information obtained in the course of the initial nursing visit.

Appropriate referrals will be made in a timely manner. Early On referrals should include ASQ results as well as documentation of diagnosis. A report to the child's healthcare provider should also be completed and submitted at this time. (Use the Report to Healthcare Provider form).

#### b. Second and subsequent home visit activities

The purpose of the second and/or subsequent nursing home visits is to assess caregiver implementation of the plan of care, including compliance with medical follow up, housekeeping practices, and reductions in exposure. Objectives of the second home

visit are to:

- **Reinforce the educational information** presented to the family during the first visit
- **Validate** the family's ability to carry out activities to minimize risks of continued lead exposure
- **Modify** the plan of care to minimize lead risks, as needed
- **Facilitate blood lead follow-up testing** and treatment recommended by the PCP
- **Follow up on any referrals made**

The second visit must include:

- A review of contact information and primary care provider information with child's caregiver(s);
- Review of initial forms and documenting changes in EBLL, child's health history, nutritional history, social history, and conditions in the home;
- Review of the Individualized Plan of Care to identify additional messages to communicate at this visit;
- Assessment of the family's understanding of their responsibilities under the Plan of Care and a determination as to whether additional education or resources are needed to implement the plan;
- Revising the Individualized Plan of Care as needed and obtaining consent or signatures; and
- Notifying the health care provider and other members of the team, including the Environmental Investigators, of significant changes .
- Complete any activities not finished during the first visit.
- Timing of the second subsequent visits may be influenced by observations/ information from the first visit, and at the case manager's discretion, may take place relatively quickly.

Results of the second and/or subsequent follow-up visits must be recorded on the Follow Up Visit form.

#### c. Nursing assessment case closure activities

Nursing services may not be discontinued until all of the following are completed

- At least 2 home visits in which lead education was provided are done
- Nutritional, medical and developmental assessments are done
- There is one blood lead level below 5 ug/dL
- Recommended abatements and/or lead hazard reduction is completed

Use of administrative case closure should be infrequent and reserved for the following extenuating circumstances:

- Parent refuses services

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/03/15

- Family has moved out of jurisdiction ( a new referral MUST be made)
- At least 3 documented attempts to locate or gain access to the child and caregiver have failed (2 visits/ 1 certified mail) and attempts to reach the family using PCP or MIWIC, MICAR, CLPPP staff and other resources have been made

#### Section 4: Environmental Investigations

The Michigan Department of Health and Human Services Healthy Homes Section is available to assist case managers with environmental investigations.

The case manager must work collaboratively with the environmental investigator to maximize the opportunity for scheduling joint visits and to ensure that inspection and remediation take place in a timely fashion.

If the child's BLL is > 44mcg/dl, the case manager will contact the primary care provider and the hospital immediately to understand the plan of care. Coordination with the EBL investigators, and hospital must be done to ensure that the child will be discharged to a safe environment (e.g. the designated property has been certified free of lead hazards before the child returns to that location.)

Contact the Health Homes Section at (866) 691-5323 or 517 335 8252 or refer to the case management guidelines for environmental visits at [http://www.michigan.gov/documents/mdch/EBL\\_EI\\_Protocol\\_February\\_2015\\_484429\\_7.pdf](http://www.michigan.gov/documents/mdch/EBL_EI_Protocol_February_2015_484429_7.pdf).

Subject: CM Forms  
To: "Lishinski, Karen (DCH)" <LishinskiK@michigan.gov>, "Nancy Peeler" <PeelerN@michigan.gov>  
Cc:

Forms:

- **Activity Log:** No changes required
- **Follow-up Visit:** No changes required
- **Individualized Plan of Care:** Fixed typos, updated revision date, under long-term development changed form to read "Date of ASQ screening"
- **Initial Home Visit:** Revised name of form, added in ASQ under developmental screening, w/comment section and date, fixed form errors, updated form date
- **Referral Form:** No changes ( [REDACTED] ----the referral for Early On is described as being for BLL>10. Do we want to add "or other noted developmental delay"?)
- **Report to Health Care Provider:** Fixed BLL repeat test protocol on second page. Updated date of form.
- **Case Closure:** Updated date of form. Updated closure reason in section 2 of form to 1 BLL<5 ug/dL to be consistent with section 1.

All form names are revised for naming convention consistency.

**Possible Lead Exposure Source(s)/ High Risk Factor(s) (Circle all that apply):**

Paint      Soil      Water      Dust      Frequent hand to mouth behavior

Worker take home exposure      Cosmetics/Home Remedy

Ceramics or pottery      Hobbies or home businesses

- ☐ Other locations where child spends time: \_\_\_\_\_  
☐ Other: \_\_\_\_\_

**Follow-up Home Visits (Check all that apply):**

- ☐ Environmental Health Visit/Home Assessment scheduled for: \_\_\_\_\_ (Date)
- ☐ Environmental Health Visit/Home Assessment complete
- ☐ Follow-up PHN visit planned
- ☐ Follow-up PHN visit scheduled for: \_\_\_\_\_ (Date)

**Referrals Made (Check all that apply):**

- ☐ Early On                      ☐ WIC                      ☐ Medicaid/Medicare                      ☐ Social Services
- ☐ Referred for developmental follow-up                      ☐ Housing remediation
- ☐ Relocation to lead safe housing
- ☐ Other: \_\_\_\_\_

**Child/Family Teaching (Check all that were covered)**

- ☐ Need for retesting
- ☐ Encouraged testing of siblings
- ☐ Encouraged handwashing
- ☐ Avoidance of chipping or peeling paint
- ☐ Temporary control of sources of exposure
- ☐ Wet mopping/cleaning techniques
- ☐ Reduction of occupational/hobby take home exposure (e.g., changing work clothes)
- ☐ Discontinue use of ceramics for cooking/storing/serving food
- ☐ Discontinue use of lead based home remedy
- ☐ Nutritional education
- ☐ Resources for housing remediation
- ☐ Other: \_\_\_\_\_

**\*Nursing recommendations to the provider:** \_\_\_\_\_

\_\_\_\_\_

**Follow Up Testing Recommendations**

- BLL 5-14 retest 1-3 months;
- BLL 15-44 retest within 1 month until levels <15;
- BLL 45+ retest monthly as directed by expert at Children's Hospital of Michigan in Detroit.

# CHILDHOOD LEAD POISONING

## Blood Lead Level (BLL) Quick Reference for Primary Care Providers

### Not Yet Tested

Consider screening ALL children between ages 1-6

Need for testing can be based on risk factors

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL <5

Review lead levels with family

Provide anticipatory guidance

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 5-14

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Perform environmental history. Consider other children who may be exposed

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Provide anticipatory guidance

Refer to case management

**FOLLOW UP:** Retest venous sample within 1-3 months to ensure BLL is not rising

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 15-44

Review lead levels with family

Confirm results with venous blood sample

Perform environmental history. Consider other children who may be exposed

Consider if a specific evaluation of the child is necessary such as an abdominal x-ray. Gut decontamination may be needed if leaded foreign bodies are visualized in x-ray

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Refer to case management

**FOLLOW UP:** Retest venous sample monthly until levels are <15, repeat every 1-3 months until levels are <5

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL >44

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Any treatment at this level should be performed in consultation with an expert at Children's Hospital of Michigan in Detroit.

**FOLLOW UP:** As directed by expert. Monthly venous samples will be required.

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

## Individualized Plan of Care

To be initiated during the first home visit (in addition to the Initial Home Visit Form) and revised on subsequent home visits.

Case Child's Name: \_\_\_\_\_ Date initiated: \_\_\_\_\_

MRN, Medical Record Number \_\_\_\_\_

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level.	Child will have 1 blood lead tests <5ug/dL	PHN will discuss with the child's caretaker and communicate with the medical provider the need for repeat BLL testing within recommended timeframes.	Date of next blood lead test should be:		
		PHN will monitor changes in BLL for a steady decline in lead levels. If a decline does not occur, the PHN will reassess exposures and need for additional referrals.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level (continued)	Child will have 1 consecutive blood lead tests <5ug/dL.	PHN will provide information on good hygiene and housekeeping measures to reduce lead exposure.	<p>Key housekeeping and health messages specific to family (check all that were discussed):</p> <p>___ Encouraged frequent adult-supervised handwashing, especially prior to meals, snacks, after playing outside, and at and bedtime .</p> <p>___ Discussed wet mopping and cleaning techniques.</p> <p>___ Observe child for pica/mouthing behavior.</p> <p>___ Discourage child from eating or sleeping on the floors until lead hazards are corrected.</p> <p>___ Encourage caregiver to wash toys, pacifiers, and bottles frequently.</p> <p>___ Educational pamphlets were provided.</p> <p>___ Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present.	Lead hazards in the child's environment will be identified.	PHN will conduct an assessment to identify potential lead hazards in the home at the time of the first home visit.	Age of home _____  Check off main lead sources found during initial visit: <input type="checkbox"/> Deteriorated Paint <input type="checkbox"/> Bare Soil <input type="checkbox"/> Water <input type="checkbox"/> Imported painted toys, lead jewelry <input type="checkbox"/> Food storage & preparation <input type="checkbox"/> Ethnic foods/medications _____ Occupation/hobby sources _____ Neighborhood exposures _____ Other (Specify): _____		
		PHN will follow-up with the environmental investigator to ensure that an investigation is completed within recommended timeframes.	Date of environmental investigation should be no later than: _____ (Date)		
		Once complete, PHN will ensure that results of the lead investigation were reviewed with the family.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed.	PHN will ensure that ways to decrease the identified lead exposure risks (both short and long-term strategies) are discussed with the family.	<p>Specific SHORT-TERM recommendations for family (check all that were discussed):</p> <p>___ Advised on ways to create barriers between the child and lead sources (contact paper, duct tape, relocation of furniture, etc.).</p> <p>___ Relocation to lead safe housing.</p> <p>___ Reviewed ways to eliminate work and hobby related exposures.</p> <p>___ Discussed ways to avoid exposure through food containers, folk remedies, or cosmetics.</p> <p>___ Encouraged the use of door mats.</p> <p>___ Other (Specify):</p> <p>Specific LONG-TERM recommendations for family (check all that were discussed):</p> <p>___ Discussed ways to cover bare soil.</p> <p>___ Discussed remediation of lead hazards and follow-up dust testing.</p> <p>___ Discussed ways to reduce exposure to lead in drinking water.</p> <p>___ Reviewed use of lead-safe work practices in renovation.</p> <p>___ Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed. (continued)	PHN will work with the environmental investigator to identify resources for addressing lead hazards.	Referrals made:		
		PHN will check with the environmental investigator to see if the rental property owner/homeowner is aware of need to address lead hazards.			
		PHN will check with the Environmental investigator to ensure that property owner is referred to prosecutor's office or district court if lead hazards are not addressed within specified period of time.			
Need for medical follow-up.	Child will have a physical exam and be screened for anemia.	PHN will communicate all necessary information to the primary care provider.			
		PHN will encourage the family and provider to make sure the child has a complete physical exam.			
		PHN will encourage the family and provider to test the child for anemia.	Results of anemia test:  Date for next anemia test:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for medical follow-up. (continued)	All children in the home will be tested for an EBLL.	PHN will encourage the family to test all children in the home, especially those under the age of six.	Gender and ages of other children in the home that should be tested:		
	An EBLL will be recorded in the child's permanent medical problem list.	PHN will encourage family and medical provider to include an EBLL in the problem list of the child's medical record.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition.	Child will be provided a diet following the food pyramid recommendations.	PHN will assess child's current diet, especially iron, vitamin C, calcium, and total fat intake.	Specific dietary recommendations based on dietary assessment (check all that were recommended): <input type="checkbox"/> Incorporate more iron rich foods by providing iron-fortified cereals to young children or one serving of lean red meat per day to older children. <input type="checkbox"/> Provide adequate intake of Vitamin C by providing 2 servings of citrus fruit juices or fruits per day. <input type="checkbox"/> Increase calcium intake to ensure 2 servings of dairy products or other calcium-rich foods a day. <input type="checkbox"/> Other (Specify):		
		PHN will provide information on the food pyramid recommendations to the family.	<input type="checkbox"/> Nutrition information pamphlet provided to family.		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition. (continued)	Child will be provided a diet following the food pyramid recommendations (continued).	PHN will encourage families not to give children supplements unless under the direct supervision of a physician.			
	Child will be enrolled in WIC if eligible.	PHN will determine WIC Eligibility.	Check one: <input type="checkbox"/> Family receiving WIC services <input type="checkbox"/> Family referred to WIC <input type="checkbox"/> Not eligible for WIC services		
	Caregiver will get assistance in providing good nutrition for the child.	PHN will provide families with additional nutritional referrals as needed.	Other nutritional referrals recommended for the family:		
Need for long-term developmental follow-up.	Family will verbalize an understanding of the need for long-term development follow-up.	PHN will discuss with the family the need to look for behaviors that may interfere with learning (e.g., inattention, distractibility, impulsivity).	Date of ASQ screening:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for long-term developmental follow-up (continued)	Family will verbalize an understanding of the need for long-term developmental follow-up. (continued)	PHN will discuss with the family and primary care provider periods when development delays may be apparent (1 <sup>st</sup> , 4 <sup>th</sup> , 6 <sup>th</sup> or 7 <sup>th</sup> grade). PHN will encourage parental sharing of child's diagnosis w/ classroom teacher(s)	Specific recommendations for the family based on development screen (check all that apply): <input type="checkbox"/> Recommend HeadStart/ Early HeadStart. <input type="checkbox"/> Refer to Early On. <input type="checkbox"/> Consider YMCA program/ other enrichment programs. <input type="checkbox"/> Encourage play groups. <input type="checkbox"/> Recommended games for parents to play on-one-one with child. <input type="checkbox"/> Provide contact information for the appropriate MSU Extension program (geographically accessible) <input type="checkbox"/> Other (Specify):		
		PHN will provide family with recommendations for informal/ formal intervention programs and refer the child for additional testing if necessary.			
Potential for family lost to follow-up services.	PHN and medical provider will be notified within one month if family changes addresses.	PHN will discuss with family the importance of maintaining contact with the PHN and medical provider. PHN will reinforce parent responsibility for ongoing health & developmental monitoring.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for additional services.

Thanks for your offer to come in to help with this Beth, we really appreciate it!

There are 9 files to merge; Karen will send you the order she wants them in. I appreciate if you can name it FLINT CM Protocol, and send both Karen and I the merged copy. Thanks!

Nancy

## Michigan's Case Management Protocol for Children with Elevated Blood Lead Levels in Flint, Michigan

## **Section 1: Application of this Protocol**

The State of Michigan's childhood lead poisoning elimination goal is to identify and provide appropriate follow-up services to all children with Elevated Blood Lead Levels (EBLLs) in order to support their continued health and safety.

To meet this goal, case management services should be performed for children with BLLs  $\geq$  5ug/dL as determined by a venipuncture test.

### **Origin**

This document represents a standard of care as prescribed by the United States Centers for Disease Control and Prevention (CDC), the American Academy of Pediatrics (AAP), Michigan state law and Medicaid. This document contains case management guidelines developed by the Nursing and Health Support component of the Michigan Department of Health and Human Services Childhood Lead Poisoning Prevention Program (CLPPP).

## **Section 2: Expectations**

Desired outcomes of EBLL case management include:

- Reducing an elevated blood lead level below the current CDC reference value of  $\geq$  5 ug/dL;
- Evidence that communication has occurred between caregivers and other service providers to ensure the child's continued health and safety;
- Evidence and assurance that appropriate action has been taken by case managers as required by this protocol.

### Section 3: Required Activities

Activities defined by Medicaid, the CDC and AAP as encompassing case management include:

- Client identification and outreach
- Individual assessment and diagnosis
- Service planning and resource identification
- Linking clients to needed services
- Service implementation and coordination
- Monitoring of service delivery
- Advocacy
- Evaluation

#### 1. Client Identification and Outreach

Case managers must continually review the list of EBLs  $\geq 5\text{ug/dL}$  provided on a weekly basis by the MDHHS Surveillance Manager. Case managers must contact and offer case management services to these families based on the schedule below. Outreach efforts must be deliberate, ongoing and varied in order to ensure that contact with families is made.

All outreach activities must be documented in activity logs and the HHLPP system.

##### a. Schedule

The following schedule must be used when initiating initial in-home nursing visits:

- BLL 5-14 within 2 weeks of referral;
- BLL 15-44 within one week of referral;
- BLL 45+ within 48 hours of referral;

##### b. Fees for Services

Medicaid provides reimbursement for the following in-home visits related to a venipuncture EBL  $\geq 5\text{ug/dL}$ :

- Two Environmental Investigations (One initial and one alternative location as needed)
- Two Blood Lead Nursing Assessment Visits (two in-home visits)

#### 2. In Home Visits

##### Nursing Assessments Overview

Nursing Assessment visits must be provided in the child's home. The objectives of the first home visit are:

- **Individual assessment and diagnosis** through a health, development, social and

dietary history for the affected child and identification of the possible sources of lead in the child's environment.

- **Development of a Plan of Care** that identifies resources specific to the individual child and family so that exposure is reduced, appropriate referrals and recommendations can be implemented, and the impact of lead exposure minimized.
- **To provide education and anticipatory guidance for caregivers** so that the effects of exposure are minimized
- **To advocate for families** to ensure they receive the appropriate support for managing their child's exposure through community referrals and resources; and
- **To ensure that the Individualized Plan of Care is continually reevaluated** until the child's lead level is below the current CDC reference value of 5ug/dL.

The initial visit will focus on:

- Assessment of the growth and development of the child, including any symptomology that may be present in the child (refer to Initial Home Visit assessment form for a list of common symptoms)
- Behavioral assessment of the child including any aggressive and/or hyperactivity
- Nutritional assessment of the child
- Assessment of typical family practices that may produce lead risk (e.g., hobbies, occupation, cultural practices)
- Limited physical identification of lead hazards within the dwelling
- Identification and planning for testing of any other family member at risk for lead hazard exposure
- Education and information regarding lead hazards and ways to minimize those risks in the future
- Development of a family plan of care to increase the safety of the child from lead hazards
- Facilitating blood lead follow-up testing and treatment recommended by the PCP.

#### *a. First visit activities*

The purpose of the initial nursing assessment home visit is to gather sufficient information to develop an Individualized Plan of Care for the child with an EBLL and to ensure that all siblings and pregnant women in the household are identified for further screening. The child with EBLL must be present at the initial visit for a physical assessment and observation of his/her behavior. During the initial visit, the following must be accomplished:

- Obtaining Caregiver authorization to release protected health information to the case management team and to referral sources as needed using the MOCH HIPAA Authorization to Disclose Protected Health Information Form or any other

- agency-developed disclosure form.
- Discuss possible sources of lead exposure:
    - Lead Paint (walls, doors, windows, furniture)
    - Child's toys or common household items
    - Cultural foods, cookware or other items
    - Parent occupation
    - Lead in water or pipes
    - Other
  - Interview of the child's caregiver(s) to collect the child's health, social and nutritional history. (Refer to the Initial Nursing Visit form).
    - Obtaining a health history that addresses the current health status of the child, including:
      - Past history of lead testing and, if necessary, chelation for the child;
      - Past history of lead testing for other family members;
      - Child's history of anemia (if any); ask caregiver to relate information re: the child's hemoglobin status;
      - Caregiver's observations about the child's developmental progress;
      - Caregiver's assessment of the child's behavior;
      - Caregiver's assessment of the child's cognitive development;
      - A visual/physical assessment of the child's body systems including eyes, heart and lungs, abdomen/digestive, elimination, muscular and skeletal;
      - Performing a standardized developmental screening to provide a baseline for the future (ASQ).
      - If the child is already enrolled in Early On or Special Education, you may instead obtain parent consent and request the evaluation assessment results from Early On or Special Education.
    - A complete nutrition history for the child including the following:
      - Caregiver's description of the child's usual diet pattern. This should begin with a twenty-four hour recall of his/her intake and ask if this is typical of the child's intake.
      - Ask about child's intake of breast milk, formula and/or cow's milk;
      - Ask about child's intake of other dairy/calcium sources;
      - Ask caregiver about child's intake of iron-containing foods and dietary fat;
      - Inquire about ethnic food products imported or carried from another country;
      - Ask about dietary supplements;
      - Ask caregiver the number of meals and number of snacks the child consumes each day; and
      - Ask where the child sits to eat.
    - A social history for the child including:

- Caregiver's description of play and sleep habits;
  - A child's usual play area;
  - Environments other than the child's primary residence where the child spends 20 hours per week or more (address and caregiver name(s));
  - Family occupational and hobby history: include occupations and hobbies of adults in the home and other adults with whom the child spends time;
  - Cultural practices or foods in use by the immediate family as well as other adults with whom the child spends time;
  - Behavior: ask the caregiver about mouthing/hand-to-mouth behaviors (to be expected in young children), including fingers in mouth; chewing on toys, crayons, newspaper/other print material, matches; consumes non-food items, such as dirt, grass, cigarettes/ashes; chews on furniture? crib/playpen? window sills/frames/doors?; plays at or near chipping or flaking paint, or has been seen eating paint chips.
- Documentation of other information including:
  - Family income source
  - Whether the family receives: WIC, food stamps, Medicaid/Medicare, other support, such as a food pantry.
  - If the residence is a rental property: name, address, phone number and/or other contact information for the rental property owner.
  - Barriers to obtaining medical care: time, both amount of time needed and time of day, child care, transportation, literacy, language barrier, etc.

After the child's history is completed, ask the caregiver for permission to look around the child's common areas for visual evidence of exposure sources, exposure behaviors and family practices.

The Individualized Plan of Care and Referral forms should be completed after reviewing the information obtained in the course of the initial nursing visit.

Appropriate referrals will be made in a timely manner. Early On referrals should include ASQ results as well as documentation of diagnosis. A report to the child's healthcare provider should also be completed and submitted at this time. (Use the Report to Healthcare Provider form).

#### **b. Second and subsequent home visit activities**

The purpose of the second and/or subsequent nursing home visits is to assess caregiver implementation of the plan of care, including compliance with medical follow up, housekeeping practices, and reductions in exposure. Objectives of the second home

visit are to:

- **Reinforce the educational information** presented to the family during the first visit
- **Validate** the family's ability to carry out activities to minimize risks of continued lead exposure
- **Modify** the plan of care to minimize lead risks, as needed
- **Facilitate blood lead follow-up testing** and treatment recommended by the PCP
- **Follow up on any referrals made**

The second visit must include:

- A review of contact information and primary care provider information with child's caregiver(s);
- Review of initial forms and documenting changes in EBLL, child's health history, nutritional history, social history, and conditions in the home;
- Review of the Individualized Plan of Care to identify additional messages to communicate at this visit;
- Assessment of the family's understanding of their responsibilities under the Plan of Care and a determination as to whether additional education or resources are needed to implement the plan;
- Revising the Individualized Plan of Care as needed and obtaining consent or signatures; and
- Notifying the health care provider and other members of the team, including the Environmental Investigators, of significant changes.
- Complete any activities not finished during the first visit.
- Timing of the second subsequent visits may be influenced by observations/information from the first visit, and at the case manager's discretion, may take place relatively quickly.

Results of the second and/or subsequent follow-up visits must be recorded on the Follow Up Visit form.

#### *c. Nursing assessment case closure activities*

Nursing services may not be discontinued until all of the following are completed

- At least 2 home visits in which lead education was provided are done
- Nutritional, medical and developmental assessments are done
- There is one blood lead level below 5 ug/dL
- Recommended abatements and/or lead hazard reduction is completed

Use of administrative case closure should be infrequent and reserved for the following extenuating circumstances:

- Parent refuses services

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/03/15

- Family has moved out of jurisdiction ( a new referral **MUST** be made)
- At least 3 documented attempts to locate or gain access to the child and caregiver have failed (2 visits/ 1 certified mail) **and** attempts to reach the family using PCP or MIWIC, MICAR, CLPPP staff and other resources have been made

#### **Section 4: Environmental Investigations**

The Michigan Department of Health and Human Services Healthy Homes Section is available to assist case managers with environmental investigations.

The case manager must work collaboratively with the environmental investigator to maximize the opportunity for scheduling joint visits and to ensure that inspection and remediation take place in a timely fashion.

If the child's BLL is > 44mcg/dl, the case manager will contact the primary care provider and the hospital immediately to understand the plan of care. Coordination with the EBL investigators, and hospital must be done to ensure that the child will be discharged to a safe environment (e.g. the designated property has been certified free of lead hazards before the child returns to that location.)

Contact the Health Homes Section at (866) 691-5323 or 517 335 8252 or refer to the case management guidelines for environmental visits at  
[http://www.michigan.gov/documents/mdch/EBL\\_EI\\_Protocol\\_February\\_2015\\_484429\\_7.pdf](http://www.michigan.gov/documents/mdch/EBL_EI_Protocol_February_2015_484429_7.pdf).

Contacting Families  
Child Elevated Lead Case Management  
Genesee County Health Department

It is imperative that the Case Managers make every reasonable and possible attempt to contact the families of the EBLL children in order to offer Case Management and Environmental Investigation Services.

After three documented initial attempts (two home visits and one certified letter) to locate the family, further attempts should be made to find and contact the family via other resources, including, but not limited to:

- Primary Care Physician
- MI WIC data base
- MCIR data base
- Other local resources
- State of Michigan CLPPP staff (to access other state data bases)

Follow Up Home Visit Report**

Child's Name \_\_\_\_\_ Date of Visit: \_\_\_\_\_

Date of Birth: \_\_\_\_\_

MRN \_\_\_\_\_ Environmental investigator \_\_\_\_\_

**Has there been a change in any of the following:**

- ☐ Child's Primary Address \_\_\_\_\_
- ☐ Parents' contact information \_\_\_\_\_
- ☐ Child Care contact information \_\_\_\_\_
- ☐ Medical Provider \_\_\_\_\_
- ☐ Medical Insurance \_\_\_\_\_

**Reason(s) for Visit:** (check all that apply)

**Medical:**

- ☐ BLL remains > 5µg/dL ☐ Persistent EBL ☐ Chelation ☐ Post-chelation
- ☐ Pregnancy in the household ☐ Failure to comply with follow up testing schedule
- ☐ Other (specify): \_\_\_\_\_

**Environmental:**

- ☐ Discuss EBL Investigation report ☐ Plan for relocation to lead safe housing
- ☐ Discuss lead hazard remediation options ☐ Investigate site other than primary address
- ☐ Housing unit is associated with more than one case of lead poisoning over time
- ☐ Persistent use of home remedies/products with high lead content
- ☐ Other (specify): \_\_\_\_\_

**Nutritional and Developmental:**

- ☐ Follow up on anemia status ☐ Child exhibits new developmental/nutritional problems
- ☐ Follow up on WIC or other social service referrals
- ☐ Follow up on informal developmental services ☐ Follow up on formal developmental services referrals
- ☐ Other \_\_\_\_\_

**Review Care Plan/ Reinforce Caregiver Education:**

- ☐ Evaluate implementation of care plan ☐ Assess need for additional referrals
- ☐ Assess reasons for caregiver noncompliance
- ☐ Other (specify): \_\_\_\_\_

## Individualized Plan of Care

To be initiated during the first home visit (in addition to the Initial Home Visit Form) and revised on subsequent home visits.

Case Child's Name: \_\_\_\_\_ Date initiated: \_\_\_\_\_

MRN, Medical Record Number \_\_\_\_\_

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level.	Child will have 1 blood lead tests <5ug/dL	PHN will discuss with the child's caretaker and communicate with the medical provider the need for repeat BLL testing within recommended timeframes.	Date of next blood lead test should be:		
		PHN will monitor changes in BLL for a steady decline in lead levels. If a decline does not occur, the PHN will reassess exposures and need for additional referrals.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level (continued)	Child will have 1 consecutive blood lead tests <5ug/dL.	PHN will provide information on good hygiene and housekeeping measures to reduce lead exposure.	<p>Key housekeeping and health messages specific to family (check all that were discussed):</p> <p>___ Encouraged frequent adult-supervised handwashing, especially prior to meals, snacks, after playing outside, and at and bedtime .</p> <p>___ Discussed wet mopping and cleaning techniques.</p> <p>___ Observe child for pica/mouthing behavior.</p> <p>___ Discourage child from eating or sleeping on the floors until lead hazards are corrected.</p> <p>___ Encourage caregiver to wash toys, pacifiers, and bottles frequently.</p> <p>___ Educational pamphlets were provided.</p> <p>___ Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present.	Lead hazards in the child's environment will be identified.	PHN will conduct an assessment to identify potential lead hazards in the home at the time of the first home visit.	Age of home _____  Check off main lead sources found during initial visit: <input type="checkbox"/> Deteriorated Paint <input type="checkbox"/> Bare Soil <input type="checkbox"/> Water <input type="checkbox"/> Imported painted toys, lead jewelry <input type="checkbox"/> Food storage & preparation <input type="checkbox"/> Ethnic foods/medications _____ Occupation/hobby sources _____ Neighborhood exposures _____ Other (Specify): _____		
		PHN will follow-up with the environmental investigator to ensure that an investigation is completed within recommended timeframes.	Date of environmental investigation should be no later than: _____ (Date)		
		Once complete, PHN will ensure that results of the lead investigation were reviewed with the family.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed.	PHN will ensure that ways to decrease the identified lead exposure risks (both short and long-term strategies) are discussed with the family.	<p>Specific SHORT-TERM recommendations for family (check all that were discussed):</p> <p><input type="checkbox"/> Advised on ways to create barriers between the child and lead sources (contact paper, duct tape, relocation of furniture, etc.).</p> <p><input type="checkbox"/> Relocation to lead safe housing.</p> <p><input type="checkbox"/> Reviewed ways to eliminate work and hobby related exposures.</p> <p><input type="checkbox"/> Discussed ways to avoid exposure through food containers, folk remedies, or cosmetics.</p> <p><input type="checkbox"/> Encouraged the use of door mats.</p> <p><input type="checkbox"/> Other (Specify):</p> <p>Specific LONG-TERM recommendations for family (check all that were discussed):</p> <p><input type="checkbox"/> Discussed ways to cover bare soil.</p> <p><input type="checkbox"/> Discussed remediation of lead hazards and follow-up dust testing.</p> <p><input type="checkbox"/> Discussed ways to reduce exposure to lead in drinking water.</p> <p><input type="checkbox"/> Reviewed use of lead-safe work practices in renovation.</p> <p><input type="checkbox"/> Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed. (continued)	PHN will work with the environmental investigator to identify resources for addressing lead hazards.	Referrals made:		
		PHN will check with the environmental investigator to see if the rental property owner/homeowner is aware of need to address lead hazards.			
		PHN will check with the Environmental investigator to ensure that property owner is referred to prosecutor's office or district court if lead hazards are not addressed within specified period of time.			
Need for medical follow-up.	Child will have a physical exam and be screened for anemia.	PHN will communicate all necessary information to the primary care provider.			
		PHN will encourage the family and provider to make sure the child has a complete physical exam.			
		PHN will encourage the family and provider to test the child for anemia.	Results of anemia test:  Date for next anemia test:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for medical follow-up. (continued)	All children in the home will be tested for an EBLL.	PHN will encourage the family to test all children in the home, especially those under the age of six.	Gender and ages of other children in the home that should be tested:		
	An EBLL will be recorded in the child's permanent medical problem list.	PHN will encourage family and medical provider to include an EBLL in the problem list of the child's medical record.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition.	Child will be provided a diet following the food pyramid recommendations.	PHN will assess child's current diet, especially iron, vitamin C, calcium, and total fat intake.	Specific dietary recommendations based on dietary assessment (check all that were recommended): <input type="checkbox"/> Incorporate more iron rich foods by providing iron-fortified cereals to young children or one serving of lean red meat per day to older children. <input type="checkbox"/> Provide adequate intake of Vitamin C by providing 2 servings of citrus fruit juices or fruits per day. <input type="checkbox"/> Increase calcium intake to ensure 2 servings of dairy products or other calcium-rich foods a day. <input type="checkbox"/> Other (Specify):		
		PHN will provide information on the food pyramid recommendations to the family.	<input type="checkbox"/> Nutrition information pamphlet provided to family.		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition. (continued)	Child will be provided a diet following the food pyramid recommendations (continued).	PHN will encourage families not to give children supplements unless under the direct supervision of a physician.			
	Child will be enrolled in WIC if eligible.	PHN will determine WIC Eligibility.	Check one: <input type="checkbox"/> Family receiving WIC services <input type="checkbox"/> Family referred to WIC <input type="checkbox"/> Not eligible for WIC services		
	Caregiver will get assistance in providing good nutrition for the child.	PHN will provide families with additional nutritional referrals as needed.	Other nutritional referrals recommended for the family:		
Need for long-term developmental follow-up.	Family will verbalize an understanding of the need for long-term development follow-up.	PHN will discuss with the family the need to look for behaviors that may interfere with learning (e.g., inattention, distractibility, impulsivity).	Date of ASQ screening:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for long-term developmental follow-up (continued)	Family will verbalize an understanding of the need for long-term developmental follow-up. (continued)	PHN will discuss with the family and primary care provider periods when development delays may be apparent (1 <sup>st</sup> , 4 <sup>th</sup> , 6 <sup>th</sup> or 7 <sup>th</sup> grade). PHN will encourage parental sharing of child's diagnosis w/ classroom teacher(s)	Specific recommendations for the family based on development screen (check all that apply): <input type="checkbox"/> Recommend HeadStart/ Early HeadStart. <input type="checkbox"/> Refer to Early On. <input type="checkbox"/> Consider YMCA program/ other enrichment programs. <input type="checkbox"/> Encourage play groups. <input type="checkbox"/> Recommended games for parents to play on-one-one with child. <input type="checkbox"/> Provide contact information for the appropriate MSU Extension program (geographically accessible) <input type="checkbox"/> Other (Specify):		
		PHN will provide family with recommendations for informal/ formal intervention programs and refer the child for additional testing if necessary.			
Potential for family lost to follow-up services.	PHN and medical provider will be notified within one month if family changes addresses.	PHN will discuss with family the importance of maintaining contact with the PHN and medical provider. PHN will reinforce parent responsibility for ongoing health & developmental monitoring.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for additional services.

# CHILDHOOD LEAD POISONING

## Blood Lead Level (BLL) Quick Reference for Primary Care Providers

### Not Yet Tested

Consider screening ALL children between ages 1-6

Need for testing can be based on risk factors

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL <5

Review lead levels with family

Provide anticipatory guidance

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 5-14

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Perform environmental history. Consider other children who may be exposed

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Provide anticipatory guidance

Refer to case management

**FOLLOW UP:** Retest venous sample within 1-3 months to ensure BLL is not rising

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 15-44

Review lead levels with family

Confirm results with venous blood sample

Perform environmental history. Consider other children who may be exposed

Consider if a specific evaluation of the child is necessary such as an abdominal x-ray. Gut decontamination may be needed if leaded foreign bodies are visualized in x-ray

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Refer to case management

**FOLLOW UP:** Retest venous sample monthly until levels are <15, repeat every 1-3 months until levels are <5

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL >44

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Any treatment at this level should be performed in consultation with an expert at Children's Hospital of Michigan in Detroit.

**FOLLOW UP:** As directed by expert. Monthly venous samples will be required.

REMINDER: Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

**Situation Report for December 4, 2015**

\*\*NOTE: Contains potentially Identifiable Information- REDACT AS INDICATED\*\*  
New items for the day listed first and in bold print.

**Daily Briefing and Situation Report** prepared by Linda Dykema

**Surveillance Indicators:** People Tested since 10/1/2015: 1,361;  
Children less than 6 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 15  
Children 6 to 17 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 6  
Adults 18 years and older  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 9

**Severity Indicators:** Hospitalized/Discharged-1/1; Deaths- 0

**DAILY ACTIVITY SUMMARY**

**Elevated Blood Level (EBL) Environmental Investigations** – ETC Contractors, Wes Priem, Courtney Wisinski

- **EBL investigation for high EBL home completed on Friday 12/4/15.**
- 3 EBL investigations completed.
- 8 investigations scheduled.

**MDHHS/Genesee County Health Department (GCHD) Case Management (CM) Services** – Nancy Peeler

- **Child with EBL of 52  $\mu\text{g}/\text{dl}$ : blood level has decreased to 28  $\mu\text{g}/\text{dl}$  per confirmed lab report.**
- CM report through 11/25/15:
  - # of contacts attempted: 136
  - # offered CM: 46
  - # CM started: 5
  - # of children receiving CM who live in Flint: 5
  - # billed to Medicaid: 5
  - # Other disposition: 2 (2 children moved to Oakland County)

**Epidemiology/Surveillance** – Patti McKane, Martha Stanbury, Bob Scott, Jessica Cooper, Karen Lishinski

- **EPA, CDC, MDHHS, local health department call scheduled for later this week to discuss Legionellosis.**

**Filter Distribution** Sheryl Thompson

- |  |   |
|--|---|
| <ul style="list-style-type: none"><li>• November Distribution<ul style="list-style-type: none"><li>○ 778 Filters</li><li>○ 63 Pitchers</li><li>○ 924 Replacement Filters</li></ul></li></ul> | <ul style="list-style-type: none"><li>• Total Distribution since October 1, 2015<ul style="list-style-type: none"><li>○ 10,951 Filters</li><li>○ 184 Pitchers</li><li>○ 924 Replacement Filters</li></ul></li></ul> |
|--|---|

**Communications/Information Sharing** – Linda Dykema, Eden Wells

- **EPA drinking water experts will present to Technical Advisory Committee meeting on December 9<sup>th</sup>. Topics will include water treatment/corrosion, the status of Flint's water and next steps.**

**Health Education Resources Updates** - Michelle Bruneau, Emily Houk

- **Finalized Phosphates fact sheet with GCHD; sent final version to MDHHS Communication office to be finalized and posted on the website.**
- **Bath time poster finalized and forwarded to HHS Communications/PIO for review and approval.**
- **Per Emily Houk, mailed 1000 Keep Your Child Lead-Safe booklets (English), 500 Keep Your Child Lead-Safe booklets (Spanish), and 4 boxes of Fight Lead Poisoning with a Healthy Diet to GCHD.**
- **Finalized time/date of technical meeting with GCHD to discuss phosphate dosing and health (Wednesday, 12/9; 9:30-11a).**
- **Pending: Aerator/Filter Maintenance Fact Sheet; Flint Parent Letter re-do in partnership with Emily Houk.**

**Toxicology** - Kory Groetsch, Jennifer Gray, Junaid Maqsood, Veronica Tijerina

- **Collaborating with Surveillance, CM, and EBL response staff to develop a Data Dictionary and Database to track services provided to EBL children/families.**
- Working with GCHD and DEQ to address questions concerning impact of phosphate treatment on drinking water filters.
- Working with Healthy Homes Section staff to revise EBL report for Flint Residents.

**WIC**

- Letter sent 11/24 to GCHD about Ready-to-feed formula availability from WIC program
- Talking points for WIC staff and for providers shared

**Healthcare/Providers**

- **Drafted HAN to Flint healthcare providers for review by the project communications team and GCHD. The HAN encourages enhanced BLL testing for children less than six, particularly outside of the 1 and 2 years of age that are required by Medicaid.**
- Moran, Wells and Miller met with Medicaid health plan staff 2 to discuss increased promotion by health plans of EBL testing of Flint children < 6 years of age. Status update on Flint provided. Medicaid put this issue on its agenda for discussion at its December 3 meeting with Medicaid health plan CEOs and suggested inviting Dr. Wells to speak to Medicaid health plan medical directors.
- Medicaid identified three individuals to partner with epidemiology staff to develop methodology to measure/report progress on the percentage of Flint children enrolled in Medicaid who receive EBL testing.

**DEQ Information** - Linda Dykema as Liaison

- No updates for 12/4/2015.

**Subject:** email to send out on Tuesday morning

See below, trying to keep it short! Please copy me and Linda Dykema on the email to Candace. Thanks!

---

Dear Candace,

I just wanted to follow up on your inquiry to our program about assistance with Representative Neely's upcoming health fair in Flint.

We wanted to confirm that the Genesee County Health Department is your best resource for materials, and we understand they do have print materials about nutrition related to children and lead exposure. Either the WIC staff at the Genesee County Health Department, or potentially staff at MSU Extension, could be good resources related to your proposed 'healthy eating' demonstration. Good luck with your event!

Karen Lishinski RN MA

**To:** Peeler, Nancy (DHHS)  
**Subject:** RE: question about Pediatric Symptom Checklist

For young children that are screened with the ASQ, the process is clear in most communities (to Early On) but with older children, the identification of mental health issues would mean a referral to a mental health professional for assessment. For Medicaid children the health plans should have practices/agencies identified in the community or for those with very severe issues, a referral to Genesee Health Systems (community mental health) would be warranted. Valinda Christopher is the children's services director in Genesee. Would you like me to contact her?

Mary

**To:** Ludtke, Mary (DHHS) <[ludtkem@michigan.gov](mailto:ludtkem@michigan.gov)>  
**Subject:** RE: question about Pediatric Symptom Checklist

This would be the nurse case managers from the local health department using the tool, with 6-17 year olds. If they had a finding on the screener, they might send info the PCP for them to order further testing or follow-up, or perhaps the ISD for special ed, or CMH. We haven't started yet, so not sure what they will find or where the referral would go.

**To:** Peeler, Nancy (DHHS) <[PeelerN@michigan.gov](mailto:PeelerN@michigan.gov)>  
**Subject:** RE: question about Pediatric Symptom Checklist

Nancy...we have supported the use of the Pediatric Symptom Checklist in discussions with Medicaid and primary care (as we did in LAUNCH). There are not any specific training videos, to my knowledge, but the Mass General website has all of the materials that one would need. I appreciate that they have a youth version (over 13 years) and the tool in multiple languages including a pictorial version. Since this tool is used in general pediatric care, I don't foresee any issues with using the tool. I trust that it will be useful in primary care. Has anyone let the CMH know that additional screening will be going on to make sure that they know that they may get calls from pediatric care/families?

Of course, the PSC does not screen for other developmental issues besides social emotional health. Will the docs have additional surveillance questions to ensure all of the developmental issues are addressed?

Mary

**To:** Ludtke, Mary (DHHS) <[ludtkem@michigan.gov](mailto:ludtkem@michigan.gov)>  
**Subject:** question about Pediatric Symptom Checklist

Hi Mary – We are working closely with Genesee County Health Department as they provide case management services to children in Flint with elevated blood lead levels. Our case management protocol includes developmental screening

with the ASQ for younger children, . However, there are also some 6-17 year olds that may receive services, and I am considering substituting the PSC for the ASQ for that older group. A couple of questions for you:

- Do you see any issues with using the PSC in this type of circumstance?
- We accessed the tool, scoring materials, administration information are available for free online. Are there any training videos or materials specific to this tool that you are aware of? Would that be needed (it didn't look like it to me).

Thanks for any info you can offer!

Nancy

Subject: 010116 Edited FLINT BLOOD LEAD CM - weekly status tracking form v5 12.22.15.xlsx

Hello

Here is an updated file. Not much movement over last 2 weeks due to short weeks and holidays. No new file from Bob until this week. I added a column (B) to report week's lists numbers instead of the number being buried in the first column (A). It helped for the formulas. The columns shifted once to right to become C to O. We did open one child to case management during this time period.

Thank you

**Subject:** GCHD info about challenges  
**Attachments:** GCHD info about challenges.docx

My notes, FYI. I will share these in my daily update, and we can escalate the question about the CM and EBL always being together.

**GCHD info about challenges/barriers with CM in Flint:**

- CM staff have another 6 scheduled, not seen yet.
- Some families with multiple kids, but GCHD has been counting the family, not # of children. So numbers look low.
  - *Follow up: Genesee staff will discuss with their Supervisor including count of children (in columns F and H), not count of families. Both parties understand that the # of Medicaid claims filed will not match the # of children.*
- Many of these are old tests – so families are choosing to get a new test, want to see what those results are before they have someone come out.
- Some families have moved, are not at the same address as when the child had the EBL, therefore do not want someone to come out.
- Some people have asked for more information, so they can think about whether they want someone to come out.
- Some people live with other people, so need to loop others into the decision to accept CM or invite the EBL investigator into the home.
- Currently offering both CM and EBL when they call; some families don't want a 6 hour visit. Also the nurses are trying to go out with the EBL investigator, which holds up the CM visits.
  - *Follow up: Are we comfortable with the two services being offered separately, in case the family will accept one but not the other? We will review this here with Wes and Courtney; Genesee will review this with Jori to get her input.*
- Some families are convinced that the water is the only problem, so they are not feeling the need for CM and/or EBL investigation that looks at the house. Some have accepted filters, but not CM/EBL.
- Some children have a history of even higher EBLs, so a 5 or even a 10 now is not a big concern to the family.

**Subject:** CM for children with lead levels < 5

Good afternoon, Jori.

Per our discussion last week, with this email I am verifying our conversation that there may occasionally be circumstances where GCHD deems it appropriate and necessary to offer Case Management services to a child in Flint/Genesee County, who has been exposed to Flint water, that has a blood lead test showing a lead level <5. If this occurs, we appreciate if you could keep us informed that you have made such determination, and for whom (conversation during the weekly call will suffice). That will help us as we maintain our records here. Please let me know if you have questions.

Nancy Peeler, Manager  
Early Childhood Health Section

**Subject:** RE: DFCH/HP Planning

**Attachments:** Agenda MHPs and Lead Services 12 11 15.docx; FLINT CM Protocol.pdf

Good morning - I'm sending an agenda for today's meeting about Medicaid Health Plans and lead, along with our updated CLPPP Case Management protocol, FYI. Also note that I have added Martha Stanbury and Wes Priem to this email list, as they weren't on the original invitation. Martha and Wes, not sure you can join on short notice, and I apologize that you didn't receive notice about this meeting earlier.

The conference call information is listed on the agenda as well as below. I will be sending the updated workplan later, just before the meeting. See you this afternoon!

Nancy

## Michigan's Case Management Protocol for Children with Elevated Blood Lead Levels in Flint, Michigan

## **Section 1: Application of this Protocol**

The State of Michigan's childhood lead poisoning elimination goal is to identify and provide appropriate follow-up services to all children with Elevated Blood Lead Levels (EBLLs) in order to support their continued health and safety.

To meet this goal, case management services should be performed for children with BLLs  $\geq$  5ug/dL as determined by a venipuncture test.

### **Origin**

This document represents a standard of care as prescribed by the United States Centers for Disease Control and Prevention (CDC), the American Academy of Pediatrics (AAP), Michigan state law and Medicaid. This document contains case management guidelines developed by the Nursing and Health Support component of the Michigan Department of Health and Human Services Childhood Lead Poisoning Prevention Program (CLPPP).

## **Section 2: Expectations**

Desired outcomes of EBLL case management include:

- Reducing an elevated blood lead level below the current CDC reference value of  $\geq$  5 ug/dL;
- Evidence that communication has occurred between caregivers and other service providers to ensure the child's continued health and safety;
- Evidence and assurance that appropriate action has been taken by case managers as required by this protocol.

### Section 3: Required Activities

Activities defined by Medicaid, the CDC and AAP as encompassing case management include:

- Client identification and outreach
- Individual assessment and diagnosis
- Service planning and resource identification
- Linking clients to needed services
- Service implementation and coordination
- Monitoring of service delivery
- Advocacy
- Evaluation

#### 1. Client Identification and Outreach

Case managers must continually review the list of EBLs  $\geq 5\text{ug/dL}$  provided on a weekly basis by the MDHHS Surveillance Manager. Case managers must contact and offer case management services to these families based on the schedule below. Outreach efforts must be deliberate, ongoing and varied in order to ensure that contact with families is made.

All outreach activities must be documented in activity logs and the HHLPP system.

##### a. Schedule

The following schedule must be used when initiating initial in-home nursing visits:

- BLL 5-14 within 2 weeks of referral;
- BLL 15-44 within one week of referral;
- BLL 45+ within 48 hours of referral;

##### b. Fees for Services

Medicaid provides reimbursement for the following in-home visits related to a venipuncture EBL  $\geq 5\text{ug/dL}$ :

- Two Environmental Investigations (One initial and one alternative location as needed)
- Two Blood Lead Nursing Assessment Visits (two in-home visits)

#### 2. In Home Visits

##### Nursing Assessments Overview

Nursing Assessment visits must be provided in the child's home. The objectives of the first home visit are:

- **Individual assessment and diagnosis** through a health, development, social and

dietary history for the affected child and identification of the possible sources of lead in the child's environment.

- **Development of a Plan of Care** that identifies resources specific to the individual child and family so that exposure is reduced, appropriate referrals and recommendations can be implemented, and the impact of lead exposure minimized.
- **To provide education and anticipatory guidance for caregivers** so that the effects of exposure are minimized
- **To advocate for families** to ensure they receive the appropriate support for managing their child's exposure through community referrals and resources; and
- **To ensure that the Individualized Plan of Care is continually reevaluated** until the child's lead level is below the current CDC reference value of 5ug/dL.

The initial visit will focus on:

- Assessment of the growth and development of the child, including any symptomology that may be present in the child (refer to Initial Home Visit assessment form for a list of common symptoms)
- Behavioral assessment of the child including any aggressive and/or hyperactivity
- Nutritional assessment of the child
- Assessment of typical family practices that may produce lead risk (e.g., hobbies, occupation, cultural practices)
- Limited physical identification of lead hazards within the dwelling
- Identification and planning for testing of any other family member at risk for lead hazard exposure
- Education and information regarding lead hazards and ways to minimize those risks in the future
- Development of a family plan of care to increase the safety of the child from lead hazards
- Facilitating blood lead follow-up testing and treatment recommended by the PCP.

#### *a. First visit activities*

The purpose of the initial nursing assessment home visit is to gather sufficient information to develop an Individualized Plan of Care for the child with an EBLL and to ensure that all siblings and pregnant women in the household are identified for further screening. The child with EBLL must be present at the initial visit for a physical assessment and observation of his/her behavior. During the initial visit, the following must be accomplished:

- Obtaining Caregiver authorization to release protected health information to the case management team and to referral sources as needed using the MOCH HIPAA Authorization to Disclose Protected Health Information Form or any other

agency-developed disclosure form.

- Discuss possible sources of lead exposure:
  - Lead Paint (walls, doors, windows, furniture)
  - Child's toys or common household items
  - Cultural foods, cookware or other items
  - Parent occupation
  - Lead in water or pipes
  - Other
- Interview of the child's caregiver(s) to collect the child's health, social and nutritional history. (Refer to the Initial Nursing Visit form).
  - Obtaining a health history that addresses the current health status of the child, including:
    - Past history of lead testing and, if necessary, chelation for the child;
    - Past history of lead testing for other family members;
    - Child's history of anemia (if any); ask caregiver to relate information re: the child's hemoglobin status;
    - Caregiver's observations about the child's developmental progress;
    - Caregiver's assessment of the child's behavior;
    - Caregiver's assessment of the child's cognitive development;
    - A visual/physical assessment of the child's body systems including eyes, heart and lungs, abdomen/digestive, elimination, muscular and skeletal;
    - Performing a standardized developmental screening to provide a baseline for the future (ASQ).
    - If the child is already enrolled in Early On or Special Education, you may instead obtain parent consent and request the evaluation assessment results from Early On or Special Education.
  - A complete nutrition history for the child including the following:
    - Caregiver's description of the child's usual diet pattern. This should begin with a twenty-four hour recall of his/her intake and ask if this is typical of the child's intake.
    - Ask about child's intake of breast milk, formula and/or cow's milk;
    - Ask about child's intake of other dairy/calcium sources;
    - Ask caregiver about child's intake of iron-containing foods and dietary fat;
    - Inquire about ethnic food products imported or carried from another country;
    - Ask about dietary supplements;
    - Ask caregiver the number of meals and number of snacks the child consumes each day; and
    - Ask where the child sits to eat.
  - A social history for the child including:

- Caregiver's description of play and sleep habits;
  - A child's usual play area;
  - Environments other than the child's primary residence where the child spends 20 hours per week or more (address and caregiver name(s));
  - Family occupational and hobby history: include occupations and hobbies of adults in the home and other adults with whom the child spends time;
  - Cultural practices or foods in use by the immediate family as well as other adults with whom the child spends time;
  - Behavior: ask the caregiver about mouthing/hand-to-mouth behaviors (to be expected in young children), including fingers in mouth; chewing on toys, crayons, newspaper/other print material, matches; consumes non-food items, such as dirt, grass, cigarettes/ashes; chews on furniture? crib/playpen? window sills/frames/doors?; plays at or near chipping or flaking paint, or has been seen eating paint chips.
- Documentation of other information including:
  - Family income source
  - Whether the family receives: WIC, food stamps, Medicaid/Medicare, other support, such as a food pantry.
  - If the residence is a rental property: name, address, phone number and/or other contact information for the rental property owner.
  - Barriers to obtaining medical care: time, both amount of time needed and time of day, child care, transportation, literacy, language barrier, etc.

After the child's history is completed, ask the caregiver for permission to look around the child's common areas for visual evidence of exposure sources, exposure behaviors and family practices.

The Individualized Plan of Care and Referral forms should be completed after reviewing the information obtained in the course of the initial nursing visit.

Appropriate referrals will be made in a timely manner. Early On referrals should include ASQ results as well as documentation of diagnosis. A report to the child's healthcare provider should also be completed and submitted at this time. (Use the Report to Healthcare Provider form).

#### **b. Second and subsequent home visit activities**

The purpose of the second and/or subsequent nursing home visits is to assess caregiver implementation of the plan of care, including compliance with medical follow up, housekeeping practices, and reductions in exposure. Objectives of the second home

visit are to:

- **Reinforce the educational information** presented to the family during the first visit
- **Validate** the family's ability to carry out activities to minimize risks of continued lead exposure
- **Modify** the plan of care to minimize lead risks, as needed
- **Facilitate blood lead follow-up testing** and treatment recommended by the PCP
- **Follow up on any referrals made**

The second visit must include:

- A review of contact information and primary care provider information with child's caregiver(s);
- Review of initial forms and documenting changes in EBLL, child's health history, nutritional history, social history, and conditions in the home;
- Review of the Individualized Plan of Care to identify additional messages to communicate at this visit;
- Assessment of the family's understanding of their responsibilities under the Plan of Care and a determination as to whether additional education or resources are needed to implement the plan;
- Revising the Individualized Plan of Care as needed and obtaining consent or signatures; and
- Notifying the health care provider and other members of the team, including the Environmental Investigators, of significant changes.
- Complete any activities not finished during the first visit.
- Timing of the second subsequent visits may be influenced by observations/information from the first visit, and at the case manager's discretion, may take place relatively quickly.

Results of the second and/or subsequent follow-up visits must be recorded on the Follow Up Visit form.

#### ***c. Nursing assessment case closure activities***

Nursing services may not be discontinued until all of the following are completed

- At least 2 home visits in which lead education was provided are done
- Nutritional, medical and developmental assessments are done
- There is one blood lead level below 5 ug/dL
- Recommended abatements and/or lead hazard reduction is completed

Use of administrative case closure should be infrequent and reserved for the following extenuating circumstances:

- Parent refuses services

Case Management Protocol for Children with Elevated Blood Lead Levels  
Michigan Department of Health and Human Services  
Revised 12/03/15

- Family has moved out of jurisdiction ( a new referral **MUST** be made)
- At least 3 documented attempts to locate or gain access to the child and caregiver have failed (2 visits/ 1 certified mail) **and** attempts to reach the family using PCP or MIWIC, MICAR, CLPPP staff and other resources have been made

#### **Section 4: Environmental Investigations**

The Michigan Department of Health and Human Services Healthy Homes Section is available to assist case managers with environmental investigations.

The case manager must work collaboratively with the environmental investigator to maximize the opportunity for scheduling joint visits and to ensure that inspection and remediation take place in a timely fashion.

If the child's BLL is > 44mcg/dl, the case manager will contact the primary care provider and the hospital immediately to understand the plan of care. Coordination with the EBL investigators, and hospital must be done to ensure that the child will be discharged to a safe environment (e.g. the designated property has been certified free of lead hazards before the child returns to that location.)

Contact the Health Homes Section at (866) 691-5323 or 517 335 8252 or refer to the case management guidelines for environmental visits at [http://www.michigan.gov/documents/mdch/EBL\\_EI\\_Protocol\\_February\\_2015\\_484429\\_7.pdf](http://www.michigan.gov/documents/mdch/EBL_EI_Protocol_February_2015_484429_7.pdf).

Contacting Families  
Child Elevated Lead Case Management  
Genesee County Health Department

It is imperative that the Case Managers make every reasonable and possible attempt to contact the families of the EBL children in order to offer Case Management and Environmental Investigation Services.

After three documented initial attempts (two home visits and one certified letter) to locate the family, further attempts should be made to find and contact the family via other resources, including, but not limited to:

- Primary Care Physician
- MI WIC data base
- MCIR data base
- Other local resources
- State of Michigan CLPPP staff (to access other state data bases)

**Compare these lists to the food guidelines appropriate for the child's age.**

**Comments:** \_\_\_\_\_  
 \_\_\_\_\_

**Social History:**

How long has the child lived at this address? \_\_\_\_\_

**List all locations where the child currently spends or within the past two years has spent more than 20 hours a week.**

Address:	Facility:	How Long at Address	Contact Name:	Phone #:

Where does your child spend most of his/her time when at home? \_\_\_\_\_

Where is your child's most frequent play area? \_\_\_\_\_

**Check the answer that applies.**

Does family remove shoes when entering the house?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does family have a pet that could track contaminated soil/dust from outside? If yes, where does the pet sleep? _____	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does child play in, live in, or have access to areas where shellacs, dyes, etc are kept?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does your child ever play in the yard or the dirt near the house?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does your child ever play on the porch or painted steps?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does your child play in areas of chipping or deteriorated paint?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does your child play at a park or playground? If yes, specify location: _____	<input type="checkbox"/> Yes <input type="checkbox"/> No

Does your child wash his/her hand before meals, after playing outside, at bedtime and naptime?  
☐ Yes ☐ No

Mouthing activity is normal in young children; does your child do any of the following?

<input type="checkbox"/> sucks fingers	<input type="checkbox"/> eats/chews paint chips
<input type="checkbox"/> picks at painted surfaces	<input type="checkbox"/> eats soil
<input type="checkbox"/> puts painted objects in mouth	<input type="checkbox"/> puts matches in mouth
<input type="checkbox"/> puts soft metal objects in mouth	<input type="checkbox"/> puts old or foreign printed materials in mouth
<input type="checkbox"/> sucks on or eats other non-food items (i.e., miniblinds)	<input type="checkbox"/> plays with cosmetics/hair preparations metal objects or talc or puts them in mouth

Has anyone in the household recently traveled outside the U.S.? ☐ Yes ☐ No

If yes, Who and to what countries? \_\_\_\_\_

Does anyone in the household use paints, pigments, facial cosmetics, or hair coloring containing lead? ☐ Yes ☐ No If yes, explain: \_\_\_\_\_

Does anyone in the household use or have access to imported cosmetics, folk medicines, or non prescription medication or ethnic foods? ☐ Yes ☐ No

**Check the answer that applies:**

Are there imported non-glossy vinyl mini blinds in the house?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is there an industrial area within one mile of the house? If yes, type of industry: _____	<input type="checkbox"/> Yes <input type="checkbox"/> No
Has any renovation work been done in the past six months?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Have you or anyone in the household had lead-safe work practices training?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Has painted wood ever been burned in a wood-stove or fireplace?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Have ashes ever been emptied onto soil?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Were gasoline or other solvents ever used to clean parts or disposed of at the property?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Has soil ever been tested for lead?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Has the water ever been tested for lead?	<input type="checkbox"/> Yes <input type="checkbox"/> No

## Individualized Plan of Care

To be initiated during the first home visit (in addition to the Initial Home Visit Form) and revised on subsequent home visits.

Case Child's Name: \_\_\_\_\_ Date initiated: \_\_\_\_\_

MRN, Medical Record Number \_\_\_\_\_

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level.	Child will have 1 blood lead tests <5ug/dL	PHN will discuss with the child's caretaker and communicate with the medical provider the need for repeat BLL testing within recommended timeframes.	Date of next blood lead test should be:		
		PHN will monitor changes in BLL for a steady decline in lead levels. If a decline does not occur, the PHN will reassess exposures and need for additional referrals.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Elevated Blood Lead Level (continued)	Child will have 1 consecutive blood lead tests <5ug/dL.	PHN will provide information on good hygiene and housekeeping measures to reduce lead exposure.	<p>Key housekeeping and health messages specific to family (check all that were discussed):</p> <p>___ Encouraged frequent adult-supervised handwashing, especially prior to meals, snacks, after playing outside, and at and bedtime .</p> <p>___ Discussed wet mopping and cleaning techniques.</p> <p>___ Observe child for pica/mouthing behavior.</p> <p>___ Discourage child from eating or sleeping on the floors until lead hazards are corrected.</p> <p>___ Encourage caregiver to wash toys, pacifiers, and bottles frequently.</p> <p>___ Educational pamphlets were provided.</p> <p>___ Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present.	Lead hazards in the child's environment will be identified.	PHN will conduct an assessment to identify potential lead hazards in the home at the time of the first home visit.	Age of home _____  Check off main lead sources found during initial visit: <input type="checkbox"/> Deteriorated Paint <input type="checkbox"/> Bare Soil <input type="checkbox"/> Water <input type="checkbox"/> Imported painted toys, lead jewelry <input type="checkbox"/> Food storage & preparation <input type="checkbox"/> Ethnic foods/medications _____ Occupation/hobby sources _____ Neighborhood exposures _____ Other (Specify): _____		
		PHN will follow-up with the environmental investigator to ensure that an investigation is completed within recommended timeframes.	Date of environmental investigation should be no later than: _____ (Date)		
		Once complete, PHN will ensure that results of the lead investigation were reviewed with the family.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed.	PHN will ensure that ways to decrease the identified lead exposure risks (both short and long-term strategies) are discussed with the family.	<p>Specific SHORT-TERM recommendations for family (check all that were discussed):</p> <p>___ Advised on ways to create barriers between the child and lead sources (contact paper, duct tape, relocation of furniture, etc.).</p> <p>___ Relocation to lead safe housing.</p> <p>___ Reviewed ways to eliminate work and hobby related exposures.</p> <p>___ Discussed ways to avoid exposure through food containers, folk remedies, or cosmetics.</p> <p>___ Encouraged the use of door mats.</p> <p>___ Other (Specify):</p> <p>Specific LONG-TERM recommendations for family (check all that were discussed):</p> <p>___ Discussed ways to cover bare soil.</p> <p>___ Discussed remediation of lead hazards and follow-up dust testing.</p> <p>___ Discussed ways to reduce exposure to lead in drinking water.</p> <p>___ Reviewed use of lead-safe work practices in renovation.</p> <p>___ Other (Specify):</p>		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Lead hazard present. (continued)	Lead hazards are addressed. (continued)	PHN will work with the environmental investigator to identify resources for addressing lead hazards.	Referrals made:		
		PHN will check with the environmental investigator to see if the rental property owner/homeowner is aware of need to address lead hazards.			
		PHN will check with the Environmental investigator to ensure that property owner is referred to prosecutor's office or district court if lead hazards are not addressed within specified period of time.			
Need for medical follow-up.	Child will have a physical exam and be screened for anemia.	PHN will communicate all necessary information to the primary care provider.			
		PHN will encourage the family and provider to make sure the child has a complete physical exam.			
		PHN will encourage the family and provider to test the child for anemia.	Results of anemia test:  Date for next anemia test:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for medical follow-up. (continued)	All children in the home will be tested for an EBLL.	PHN will encourage the family to test all children in the home, especially those under the age of six.	Gender and ages of other children in the home that should be tested:		
	An EBLL will be recorded in the child's permanent medical problem list.	PHN will encourage family and medical provider to include an EBLL in the problem list of the child's medical record.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition.	Child will be provided a diet following the food pyramid recommendations.	PHN will assess child's current diet, especially iron, vitamin C, calcium, and total fat intake.	Specific dietary recommendations based on dietary assessment (check all that were recommended): <input type="checkbox"/> Incorporate more iron rich foods by providing iron-fortified cereals to young children or one serving of lean red meat per day to older children. <input type="checkbox"/> Provide adequate intake of Vitamin C by providing 2 servings of citrus fruit juices or fruits per day. <input type="checkbox"/> Increase calcium intake to ensure 2 servings of dairy products or other calcium-rich foods a day. <input type="checkbox"/> Other (Specify):		
		PHN will provide information on the food pyramid recommendations to the family.	<input type="checkbox"/> Nutrition information pamphlet provided to family.		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Potential for poor nutrition. (continued)	Child will be provided a diet following the food pyramid recommendations (continued).	PHN will encourage families not to give children supplements unless under the direct supervision of a physician.			
	Child will be enrolled in WIC if eligible.	PHN will determine WIC Eligibility.	Check one: <input type="checkbox"/> Family receiving WIC services <input type="checkbox"/> Family referred to WIC <input type="checkbox"/> Not eligible for WIC services		
	Caregiver will get assistance in providing good nutrition for the child.	PHN will provide families with additional nutritional referrals as needed.	Other nutritional referrals recommended for the family:		
Need for long-term developmental follow-up.	Family will verbalize an understanding of the need for long-term development follow-up.	PHN will discuss with the family the need to look for behaviors that may interfere with learning (e.g., inattention, distractibility, impulsivity).	Date of ASQ screening:		

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for long-term developmental follow-up (continued)	Family will verbalize an understanding of the need for long-term developmental follow-up. (continued)	PHN will discuss with the family and primary care provider periods when development delays may be apparent (1 <sup>st</sup> , 4 <sup>th</sup> , 6 <sup>th</sup> or 7 <sup>th</sup> grade). PHN will encourage parental sharing of child's diagnosis w/ classroom teacher(s)	Specific recommendations for the family based on development screen (check all that apply): <input type="checkbox"/> Recommend HeadStart/ Early HeadStart. <input type="checkbox"/> Refer to Early On. <input type="checkbox"/> Consider YMCA program/ other enrichment programs. <input type="checkbox"/> Encourage play groups. <input type="checkbox"/> Recommended games for parents to play on-one-one with child. <input type="checkbox"/> Provide contact information for the appropriate MSU Extension program (geographically accessible) <input type="checkbox"/> Other (Specify):		
		PHN will provide family with recommendations for informal/ formal intervention programs and refer the child for additional testing if necessary.			
Potential for family lost to follow-up services.	PHN and medical provider will be notified within one month if family changes addresses.	PHN will discuss with family the importance of maintaining contact with the PHN and medical provider. PHN will reinforce parent responsibility for ongoing health & developmental monitoring.			

Problem	Outcomes	Actions	Additional Information (specific for family)	Date Covered	PHN Initials
Need for additional services.

# CHILDHOOD LEAD POISONING

## Blood Lead Level (BLL) Quick Reference for Primary Care Providers

### Not Yet Tested

Consider screening ALL children between ages 1-6

Need for testing can be based on risk factors

**REMINDER:** Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL <5

Review lead levels with family

Provide anticipatory guidance

**REMINDER:** Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 5-14

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Perform environmental history. Consider other children who may be exposed

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Provide anticipatory guidance

Refer to case management

**FOLLOW UP:** Retest venous sample within 1-3 months to ensure BLL is not rising

**REMINDER:** Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL 15-44

Review lead levels with family

Confirm results with venous blood sample

Perform environmental history. Consider other children who may be exposed

Consider if a specific evaluation of the child is necessary such as an abdominal x-ray. Gut decontamination may be needed if leaded foreign bodies are visualized in x-ray

Consider iron sufficiency, provide nutritional counseling r/t calcium and iron

Refer to case management

**FOLLOW UP:** Retest venous sample monthly until levels are <15, repeat every 1-3 months until levels are <5

**REMINDER:** Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

### BLL >44

Review lead levels with family

Confirm results with venous blood sample

Review venous sample with family

Any treatment at this level should be performed in consultation with an expert at Children's Hospital of Michigan in Detroit.

**FOLLOW UP:** As directed by expert. Monthly venous samples will be required.

**REMINDER:** Medicaid requires all children to be tested at ages 1 & 2. Children who were not tested between 1 & 2 must be tested at least once between 3 & 6.

## Press Release

---

**FOR IMMEDIATE RELEASE:** December 11, 2015

**CONTACT:** Jennifer Eisner, (517) 241-2112

### **MDHHS releases latest round of Flint blood lead level data**

LANSING, Mich. – The Michigan Department of Health and Human Services today issued its newest summary report on lead testing in Flint. According to preliminary data, 39 of 1,836 adults and children tested had elevated blood lead levels since Oct. 1.

“As testing continues, our focus remains on helping families reduce all potential exposures to lead,” said Dr. Eden Wells, MDHHS chief medical executive. “We are working closely with the Genesee County Health Department to provide information and offer tools in the community, and encourage families to explore the resources that are available to them.”

Both capillary and venous blood tests are included in the report, and people who have had multiple tests are counted only once. Tests and their results cover the time since the state action plan was

put in place on Oct. 2, and capture the number of elevated blood lead levels greater than 5 micrograms per deciliter.

MDHHS is working closely with local partners to offer resources and distribute important lead testing and prevention information. Additional state funding has allowed for Genesee County Health Department (GCHD) nurses to work with families when an elevated blood lead level is detected. These families can also choose to have the nurse coordinate an environmental health investigation in their home to identify lead exposures, which could be lead from paint, soil, plumbing, and other sources.

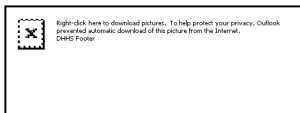

To support these efforts, the state is coordinating with its Medicaid health plans and provider communities on enhanced screening and testing. In addition to mandated testing at ages one and two for the Medicaid population, MDHHS has recommended blood lead testing for any child younger than six years of age in Flint who has not previously been tested. The state, in coordination with GCHD, developed and issued a Health Alert Network (HAN) notification for local providers to help ensure consistent messaging and protocols among primary care providers.

Free water filters and replacement cartridges are still available to Flint residents. For a full list of locations and hours of distribution, or to view the full blood lead level report, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater). The summary will be updated as more data becomes available.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its [YouTube channel](#). For this and other updates, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

**Situation Report for December 14, 2015**

\*\*NOTE: Contains potentially Identifiable Information- REDACT AS INDICATED\*\*  
New items for the day listed first and in bold print.

**Daily Briefing and Situation Report** prepared by Linda Dykema

Surveillance Indicators: People Tested 10/1/2015 to 12/4/2015: 1,836;  
Children less than 6 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 19  
Children 6 to 17 years old  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 8  
Adults 18 years and older  $\geq 5$   $\mu\text{g}/\text{dl}$  since 10/1/2015: 12  
Severity Indicators: Hospitalized/Discharged-1/1; Deaths- 0

**DAILY ACTIVITY SUMMARY**

**Elevated Blood Level (EBL) Environmental Investigations** – ETC Contractors, Wes Priem, Courtney Wisinski

- **9 EBL investigations completed.**
- 5 investigations scheduled.
- EBL investigation for high EBL home completed on Friday 12/4/15. Unpaid taxes must be resolved to qualify for Lead Safe Home abatement. Project staff will work with family to resolve.

**MDHHS/Genesee County Health Department (GCHD) Case Management (CM) Services** – Nancy Peeler

- CM report through 12/04/15:
  - # of contacts attempted: 171
  - # offered CM: 68
  - # CM started: 10
  - # of children receiving CM who live in Flint: 10
  - # billed to Medicaid: 3
  - # other disposition: 4 (3 children moved to Oakland County, 1 to Tuscola County): Working with M. Miller and Counties to set up CM for children that have moved out of Flint.

**Epidemiology/Surveillance** – Patti McKane, Martha Stanbury, Bob Scott, Jessica Cooper, Karen Lishinski

- **Meeting scheduled for December 16 to develop a method to extract information from the MDHHS data warehouse on infants and children < 6 enrolled in Medicaid and residing in Flint. These data would be used to monitor blood lead testing outreach efforts in Flint.**
- **The amended data use agreement with Dr. Hanna-Attisha was approved.**
- Preparing 2014 lead surveillance data by Michigan zip code in response to media requests.

**Filter Distribution** Sheryl Thompson

### Communications/Information Sharing – Linda Dykema, Eden Wells

- **Received a call from EPA R5 Drinking Water: they are getting calls from Flint residents regarding safety of adding phosphates to drinking water. EPA's position is in agreement with MDHHS that phosphates do not present a health concern at the levels expected in Flint drinking water.**

### Health Education Resources Updates - Michelle Bruneau, Emily Houk

- **Sent 2<sup>nd</sup> draft of aerator cleaning fact sheet out to GCHD and MDHHS partners for comment (MB)**
- Continuing to write and coordinate additions to the EBL Case Manager Binder, now known as the MDHHS Lead Safe Family Guide Book. (MB)
- Awaiting Communications Office approval on Bath Time poster (MB)
  - Submitted publication form on 12/9
- Awaiting Communications Office approval on Phosphate Fact Sheet (MB)
  - Submitted publication form on 12/9
  - Made or responded to suggested edits on phosphate fact sheet from EPA and MDEQ on 12/10
- Pending: Filter cartridge changing fact sheet; clarifying uses of filtered/vs unfiltered water (MB)
- Pending: Lead and Nutrition fact sheet and Flint Parent Letter re-do in partnership with Emily Houk.

### Toxicology - Kory Groetsch, Jennifer Gray, Lisa Quiggle

- **Gathering information on uncertainties related to water filters.**
- Collaborating with Surveillance, CM, and EBL response staff to develop a Data Dictionary and Database to track services provided to EBL children/families.

### WIC

- Letter sent 11/24 to GCHD about Ready-to-feed formula availability from WIC program
- Talking points for WIC staff and for providers shared

### Healthcare/Providers

- **HAN recommending enhanced BLL testing for children less than six, particularly outside of the 1 and 2 years of age that are required by Medicaid, was sent to Flint health care providers.**

### DEQ Information - Linda Dykema as Liaison

- **DEQ is requesting Phosphate fact sheet as phosphate dosing of Flint water has started.**

**Subject:** Weekly lead screening report for MHPs

Based on the response we received from all the MHPs we believe there will be great benefit to a revised report that we would design here that would give the plans more frequent results (weekly) for their members like the LHDs receive for children in their jurisdictions. Some plans are getting more frequent data directly from their lab vendors, however, that was not the case for the majority, so we would like to move forward with the report development as we have been discussing ASAP and make that available to the plans as another task on our workplan. Let Monica, Kim, Heather or I know if you have any questions. Who needs to get this moving?

K.

Nancy,  
Please read and share with your team if you feel it is appropriate.

I would consider the source and take with a grain of salt the context and form by which it was sent. If Jennifer has any specific questions, she will send our way.

Thanks,  
Rashmi

**Subject:** Lead Case management for 6 through 17 year olds  
**Attachments:** FLINT BLOOD LEAD CM - weekly status tracking form v5 12.22.15.xlsx

Good morning, Jori. Per our conversation last week, I am verifying that GCHD is able to provide lead case management services to children aged 6 through 17 years of age under our contract, as you see appropriate. This would cover children living in Flint or Genesee County exposed to Flint water. Bob Scott has changed his data sheet to add a tab with a list of children in this age group. I have attached a revised weekly reporting form shortly, that adds a row to capture information on any CM activities that you do provide to this age group.

Please let me know if you need further information or documentation from MDHHS.

**Subject:** RE: question about Pediatric Symptom Checklist

For young children that are screened with the ASQ, the process is clear in most communities (to Early On) but with older children, the identification of mental health issues would mean a referral to a mental health professional for assessment. For Medicaid children the health plans should have practices/agencies identified in the community or for those with very severe issues, a referral to Genesee Health Systems (community mental health) would be warranted. Valinda Christopher is the children's services director in Genesee. Would you like me to contact her?

Mary

**Subject:** RE: question about Pediatric Symptom Checklist

This would be the nurse case managers from the local health department using the tool, with 6-17 year olds. If they had a finding on the screener, they might send info the PCP for them to order further testing or follow-up, or perhaps the ISD for special ed, or CMH. We haven't started yet, so not sure what they will find or where the referral would go.

**Subject:** RE: question about Pediatric Symptom Checklist

Nancy...we have supported the use of the Pediatric Symptom Checklist in discussions with Medicaid and primary care (as we did in LAUNCH). There are not any specific training videos, to my knowledge, but the Mass General website has all of the materials that one would need. I appreciate that they have a youth version (over 13 years) and the tool in multiple languages including a pictorial version. Since this tool is used in general pediatric care, I don't foresee any issues with using the tool. I trust that it will be useful in primary care. Has anyone let the CMH know that additional screening will be going on to make sure that they know that they may get calls from pediatric care/families?

Of course, the PSC does not screen for other developmental issues besides social emotional health. Will the docs have additional surveillance questions to ensure all of the developmental issues are addressed?

Mary

**Subject:** question about Pediatric Symptom Checklist

Hi Mary – We are working closely with Genesee County Health Department as they provide case management services to children in Flint with elevated blood lead levels. Our case management protocol includes developmental screening with the ASQ for younger children, . However, there are also some 6-17 year olds that may receive services, and I am considering substituting the PSC for the ASQ for that older group. A couple of questions for you:

- Do you see any issues with using the PSC in this type of circumstance?
- We accessed the tool, scoring materials, administration information are available for free online. Are there any training videos or materials specific to this tool that you are aware of? Would that be needed (it didn't look like it to me).

Thanks for any info you can offer!

Nancy

**Subject:** FW: Molina Healthcare - Lead Testing Initiative

Good morning, Monica and Kim -- I wasn't sure who to share this with, thought I would start with you. I had a conversation with Dana Brown from Molina after the MCH meeting, and we talked about their upcoming health fairs in Flint, and the fact that they didn't have a LeadCare machine to use at those health fairs. If you are not familiar with it, LeadCare is a point of service machine that can analyze a capillary blood sample for lead, you have the result within about 3 minutes. If the capillary is high, then it is still necessary to get a venous sample to confirm the result. But if the capillary is low, then typically no further testing is needed at that time point.

Dana is going to follow-up with Magellan, as she thought there may be some practices that could meet the testing volume to get a free machine. I wonder if it would be helpful to share the Magellan information with other health plans, or possibly even invite the rep to the next MCH meeting, or host a conference call? Not sure what your usual approach is, but I at least wanted to get this information into your hands, see what you think.

Nancy

**Cc:** Lishinski, Karen (DHHS) <LishinskiK@michigan.gov>  
**Subject:** RE: Molina Healthcare - Lead Testing Initiative

Good afternoon, Dana -- I did manage to connect with Magellan today; there are two options that you might consider:

1. Magellan confirmed that they do offer free LeadCare machines for areas with low testing rates, however, you must make a commitment that you would meet a minimum testing volume, that being at least 384 tests/year (e.g. you must purchase 8 test 'kits', each of which contains supplies for 48 individual tests.  $8 \times 48 = 384$  tests. You purchase 4 test kits up front, then 4 more within the year). You would need to review your potential testing volume to see if this is a standard you could commit to meeting.
2. They have a pilot study/project going on, where you can purchase the LeadCare machine for \$2,000, which includes 2 test kits (supplies for 96 individual tests). After that, you would purchase replacement test kits (48 each) as needed, at a cost of \$382 for each test kit.

The Midwest Regional Sales Representative for Magellan is Brandon Albright; I've included his contact information below. I did tell him that he may hear from someone. He said that he is working this week and next other than Christmas Day. I hope this information is useful, and you are able to reach him!

**Subject:** Molina Healthcare - Lead Testing Initiative

Hi Nancy,

I hope all is going well!

Thank you for your presentation at last week's Maternal Child Workgroup Meeting! Your passion for your work with the Lead Program is inspiring.

Molina is working diligently on our lead testing initiative. We have a blast fax going to our providers this week re-education them on the lead test recommendations for a test at 12 and 24 months and for children 3 -6 years if they have never been tested. We are also sending our members information regarding lead testing events we planning for Jan – Mar 2016. Four events have been confirmed so far. We are doing these in schools from 3:30 – 6:30PM in the evening so they are convenient for parents.

I'd like to follow-up with our conversation regarding the LeadCare II machines offered by Magellan Diagnostics. Were you able to speak with your contact or do you have the criteria a provider office needs to meet to receive the machine?

Thanks,

Dana

**Sent:** Monday, January 04, 2016 12:08 PM  
**To:** Brewer-Walraven, Lisa (MDE)  
**Subject:** RE: Michigan News: LEAD

Good morning –

1. A good resource to share with your providers is [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater). There are resources being posted at that website that they can use. Some are being edited so there is another version with a lower reading level – that work is underway.
2. State and local partners have been working together to make sure water filters/filter replacements are available to families who are on the Flint water system. It is a good idea to continue to remind your providers to continue to use the filters, and how to obtain filter replacements. I believe we have some messaging materials about that already on the website I listed above, that you could utilize if you like. Also about how to change the filter cartridges.
3. The Genesee County Health Department (GCHD) is offering case management services for all children identified with elevated blood lead levels. Your providers could encourage families to take advantage of those services if their child has had an elevated blood lead level based on a blood test. GCHD has a list of all children with elevated levels, and is contacting each family. GCHD also has some good resources for families that providers could use.
4. Our Administration is in the process of putting together a chart of existing follow-up services that can help mitigate/address the impact of lead exposure, and we included high quality child care on that list. I had understood that there is (or will be) some sort of communication from Sue Moran to Susan Broman about this? Not sure since this is being coordinated by Rashmi and Sue – but more to come.

If you have other more specific questions, let me know, happy to share or help you find things.

# ‘Toxic stress’: Max blood lead levels in Flint children 7 times higher than CDC guidelines – doctor

Published time: 29 Dec, 2015 14:54 Edited time: 29 Dec, 2015 22:02

[Get short URL](#)

1.6K

Experts who blew the whistle on lead-contaminated water in Flint, Michigan, and its impact on children said some kids had blood lead levels far higher than those US health officials consider “elevated” – and that the state knew kids were being poisoned.

As Michigan officials scramble to help the affected community, a lead researcher who helped expose the toxicity of the water, Virginia Tech professor Marc Edwards, said city and state officials should have known that the Flint River was highly corrosive before they decided to switch from the Detroit water system in 2014. He called the lack of water treatment “*unprecedented*.”

Without phosphate treatment, the corrosive water flowed from the Flint River through the city’s lead pipes for 17 months and became

contaminated. Failures at multiple levels of government exacerbated the problem and delayed the response to the developing crisis.

On Tuesday, Michigan's top environmental regulator resigned over the crisis.

There is a *“strong correlation”* between high lead water levels in Flint and blood lead levels in children, Dr. Mona Hanna-Attisha said. A pediatrician at the Hurley Medical Center, Hanna-Attisha told RT that the highest readings she and the state recorded for elevated blood levels in Flint were 38 micrograms per deciliter.

That is more than seven times higher than the level classified as *“elevated”* by the Centers for Disease Control and Prevention (5 micrograms). The CDC states there is no safe blood lead level in children.

Hanna-Attisha first revealed that lead levels in Flint children had been rising to dangerous levels in September, although her work was initially panned and dismissed by state officials, including those representing Michigan Governor Rick Snyder. Her latest research shows the percentage of children with elevated blood lead levels (EBLL) nearly doubled – from 2.4 percent before Flint switched water sources to 4.9 percent after the switch was made.

While Hanna-Attisha said that most levels were within the CDC's 5-microgram range, she noted that lead has a very short half-life, making it difficult to determine when peak levels occur in children.

*“Our whole research grossly underestimates risk,”* she said, adding that her team is assuming Flint's entire child population has been exposed. Infants getting formula for the first six months of their life with water sourced from the Flint River face permanent damage,

she added. These problems include developmental issues, a lower IQ, and decreases in motor skills, reading, math and more. Lead affects children in utero as well, meaning it can cause miscarriages and reduced birth weights.

*"In the 1920s, people used to take lead pills to induce abortions," she said. "How many less children were born because of this [water contamination]? That's what we're looking at right now."*

According to the doctor's research, published Monday by the American Public Health Association, one particular ward in Flint saw the percentage of kids with EBLL more than triple, jumping from 4.9 percent to an astonishing 15.7 percent.

## **'The only city in America'**

The crisis in Flint began in April 2014, when the city – under the direction of a state-appointed emergency manager – moved to switch its water supply away from the Detroit system, which pumped water from Lake Huron. Flint opted to tap the local river as its drinking source until a competing pipe system via the Karegnondi Water Authority became ready in 2016, as a way to sidestep the renegotiation of interim rates with Detroit, which severed its contract with Flint in order to do so. The move was projected to save the financially struggling city between \$5 million and \$7 million a year.

**Read more**

Flint mayor declares emergency over lead water crisis, FEMA delivers 28,000 liters of H<sub>2</sub>O

A 2014 letter from then-Emergency Manager Darnell Earley to the Detroit Water and Sewerage Department, obtained by the American Civil Liberties Union of Michigan, declared the decision to go ahead and expressed Earley's confidence that the city's water treatment plant was "*fully operational and capable of treating*" the water. However, Flint never actually treated the water with the necessary chemicals to ensure it remained safe to drink as it traveled through the city's infrastructure, which contained numerous lead pipes, nor did state officials require that the city follow federal law and do so. As the water flowed for a year and a half, it would leach away lead from the pipes and become contaminated.

*"It is unprecedented for a city to not have a corrosion control plan,"* said Virginia Tech's Edwards, a civil and environmental engineer who helped lead the research effort, to RT. *"Flint is the only city in America who did not have a corrosion control plan, as required by Federal law."*

Residents complained almost immediately after the switch was made, citing the water's yellow color, bad taste, and smell. An advocacy group called Water You Fighting For was formed to raise

awareness about the issue, and it worked with the ACLU and local activists like Concerned Pastors for Social Action to highlight the predicament. When Edwards arrived in Michigan to test the water, these groups helped his team carry out its research.

However, over the next year and a half, state and local officials would insist that the water was safe to drink despite mounting evidence that lead levels were moving in the wrong direction.

## **Rising levels did not trigger action**

After switching to the Flint River, officials conducted a six-month round of testing that showed lead levels in the water to be rising. At the end of 2014, officials recorded that 10 percent of tested homes in Flint had water featuring six parts per billion (ppb) of lead or more. That fell under the federal maximum of 15 ppb, but it still represented the first time in a decade that officials were able to detect lead in the water.

*"In isolation, it should have been a red flag," Edwards said of the results, "but coupled with the fact they had no corrosion control and many lead pipes, sirens should have been going off to act quickly."*

*"On top of that consumers had been complaining about corrosion problems months before the state determined lead was rising to six ppb, so there was every reason to believe there was a problem."*

Another round of testing showed that by June, levels had risen to 11 ppb. Edwards said that even before these levels were recorded officials should have known the river would be problematic as a water source. If they didn't, these readings should have pushed them to reconsider their lack of corrosion control treatment.

*"The high corrosivity of the Flint water is perfectly obvious to anyone with training in the field, or it would have been revealed if the state had required Flint to follow federal law," he said.*

In June 2015, Environmental Protection Agency water specialist Miguel Del Toral penned a memo warning of "major concern" over lead after a concerned resident contacted the agency. Toral discovered that lead and iron levels in one resident's water were both extremely high, and that medical records showed the resident's child had elevated blood lead levels after the Flint River switch was made.

In mid-July, the Michigan Department of Environmental Quality (MDEQ) insisted to the public that the water was safe and that the findings in the EPA memo were outliers.

*"Let me start here – anyone who is concerned about lead in the drinking water in Flint can relax,"* agency spokesman Brad Wurfel told Michigan Radio. *"It does not look like there is any broad problem with the water supply freeing up lead as it goes to homes."*

## **'Conclusive evidence': Gov't docs showed lead poisoning increase**

About two weeks after Wurfel's comments, officials at the Michigan Department of Health and Human Services (DHHS) were aware that blood lead levels in kids spiked the summer following the switch, according to internal emails recently released thanks to a Freedom of Information Act request by Edwards.

The collection of documents included a DHHS report, marked current as of July 27, 2015, that showed *"positive test results for EBLL were higher than usual for children under age 16 living in the City of Flint during the months of July, August, and September, 2014."*

According to Edwards, the documents illustrate that state officials had “*scientifically conclusive evidence*” that EBLL increased significantly even as MDEQ and Flint officials continued to insist that the water was safe.

In September 2015, Edwards and his team announced their testing had shown water in Flint was 19 times more corrosive than Detroit’s, with several samples showing lead levels above 100 ppb.

© Rebecca Cook / Reuters

In response, MDEQ continued to resist the idea that lead levels were rising. Wurfel contended that MDEQ data showed that samples collected by Edwards’ team did not “*match the testing that we’ve*

*been doing in the same kind of neighborhoods all over the city for the past year."*

*"With these kind of numbers, we would have expected to be seeing a spike somewhere else in the other lead monitoring that goes on in the community."*

Dr. Hanna-Attisha was next to challenge Michigan officials, announcing on September 24 that her findings showed EBL in Flint children had doubled in 2015 compared to the 20 months before the water switch was made. Her research was immediately criticized and dismissed by the state.

Governor Snyder's spokesperson called the data "spliced and diced" in an email. Wurfel said the doctor's comments were *"unfortunate"* and arrived at a time of "near-hysteria" over the water. Officials maintained that recorded spikes in lead levels were seasonal.

Hanna-Attisha said the whole whirlwind of events was *"emotionally jarring."*

*"It makes you second-guess yourself,"* she said of the government response. *"As a scientist as a researcher you double-check, you triple-check, you go by data and numbers."*

*"When the state tells you you're wrong, how can you not doubt yourself?"*

## **Failures at multiple levels**

On October 2, state officials acknowledged the problem and confirmed Hanna-Attisha's findings. Evidence had already begun surfacing that officials mishandled the Flint situation at multiple points in time, and it continued to mount over the next couple of months. For example, the Detroit Free Press reported that internal state data actually supported Hanna-Attisha's findings and showed the

percentage of children with EBLL had not only risen, but also that it was a clear reversal of a trend that had seen lead poisoning drop in the previous years.

Additionally, it was discovered that to compile their data, officials used blood level results from children who didn't even live in Flint – kids who resided outside of city limits and were drinking water supplied by Detroit. Internal emails noted “*concern*” over Genesee County health officials raising “*the issue of including data for children outside of the city limits.*”

The Food Bank of Eastern Michigan holds stacks of bottled water in the agency's warehouse that will be distributed to the public, after elevated

lead levels were found in the city's water, in Flint, Michigan. © Rebecca Cook / Reuters

While worries over the water supply continued to rise, Flint officials filed certified documents with state regulators claiming that city workers were specifically targeting high-risk homes supplied by lead pipes in order to test for contamination, as required by federal law. They weren't. City documents revealed that they "*almost always*" tested homes with non-lead plumbing, [according to](#) MLive. Moving back even further, the city of Flint [commissioned a report](#) in 2011 that ultimately determined the river water would need to be treated with phosphate in order to reduce its corrosiveness and make it safe to drink. It was completed in 2013, sent to MDEQ – which approved of the water switch – and then sent again to another state official.

By not treating the water, officials didn't just overlook the report's findings; they also [violated federal standards](#) calling for treatment, with state workers blaming the oversight on confusion regarding EPA rules. In October, MDEQ Director Dan Wyant said the state thought it was following the proper protocol, but that it was actually using the wrong standards for a city the size of Flint.

In a letter to a state senator, Michigan's independent Auditor General Doug Ringler said that mistakes were made, but that officials did not intentionally misinform the EPA when it came to the city's lack of corrosion control treatment.

*"We have no specific reason to believe that MDEQ willfully misrepresented the information to the EPA,"* Ringler wrote, according to [Michigan Radio](#). *"We did not note any instances of major infractions (i.e., intentional disregard of policies, laws, regulations or specific directions) committed by DEQ staff during the course of our review."*

Following a series of revelations, Wyant resigned from MDEQ on December 29 and Governor Snyder apologized to Flint for the lead situation.

*"I want the Flint community to know how very sorry I am that this has happened," Snyder said. "And I want all Michigan citizens to know that we will learn from this experience, because Flint is not the only city that has an aging infrastructure."*

## **Dealing with 'toxic stress'**

On October 2, state officials released a 10-point plan to deal with the crisis, one that included expanded testing, providing water filters to residents, accelerating corrosion control treatments, and expediting the completion of the competing Port Huron-linked water system. A task force appointed by Governor Snyder recommended appointing a single person to help coordinate a faster response by the state, which Snyder did in December.

On October 16, Flint reconnected to the Detroit water system after state lawmakers and a local grant making foundation gathered the \$12 million necessary to buy water for the city.

In terms of infrastructure, Edwards said the damage done by the corrosive water to the pipes was "severe" and *"in the range of a hundred million dollars."* Since switching back to the Detroit water supply, *"the damage rate has slowed again, but what has been done, cannot be undone,"* he said.

Meanwhile, Dr. Hanna-Attisha has pushed officials to deliver a strong response for the children, because while lead damage is permanent, its effects can be alleviated with the proper resources, nutrition and support.

*"This is a toxic stress to our kids, and they're already rattled by a bunch of stresses,"* she said, including poverty and crime. *"I'm an optimist. Our community has been traumatized and it needs hope."* She said affected children need easy access to intervention services, mental health care, guaranteed early education, and better food. If that is supplied, she is hopeful that the community can mitigate the long-term consequences of lead poisoning.

*"We have to throw every resource at these kids,"* she said, adding that the state's eventual acknowledgment of the crisis was a *"sigh of relief"* for the community.

*"Unfortunately, it took children being poisoned for someone to listen."*

Subject: RE: Director's Office Assignment -- Flint - need update asap

I apologize for the delay in responding more specifically to this assignment, it took some time to review our Childhood Lead Poisoning Prevention program data to see if it might contribute to the understanding of the situation in Flint with their water supply. Here is what we found:

We looked at lead testing results for May 2014-April 2015, which is the 12 month time frame just after Flint started drawing their water from the river (water source changed in April 2014). We compared lead testing rates and lead testing results to the same time frame for the previous 3 years, to see if there were any patterns that suggested that there were increased rates of lead poisoning after the water supply was switched. Per the attached charts –

- Lead testing rates remained about the same from year to year (chart on the right).
- There was a spike in elevated blood lead tests from July-September 2014 (chart on the left, gold line).
- However that pattern was not terribly different from what we saw in the previous three years, especially in 2011-2012 (we are working with our Epidemiologist to statistically verify any significant differences).
- We commonly see a 'seasonal effect' with lead, related to people opening and closing windows more often in the summer, which disturbs old deteriorating paint on the windows, sills and sashes. Window fans frequently blow and spread the lead dust from the deteriorating paint to other parts of the room/house. We suspect that the summer data spike may be related to this effect.
- If the home water supply lines and/or river water were contributing to elevated blood lead tests, we expected that the increased rates would extend beyond the summer, but they drop quite a bit from September to October, stayed low over the winter, and are just starting to tail up again in the spring of 2015.

So upon review, we don't believe our data demonstrates an increase in lead poisoning rates that might be attributable to the change in water source for Flint. We recognize that lead exposure via the water is only a small piece of what may be happening for families in Flint, however, we hope the information is helpful.

Subject: RE: Flint - need update asap

There's an article from the metro times I located:

<http://www.metrotimes.com/Blogs/archives/2015/07/14/flint-family-finds-hazardous-waste-levels-of-lead-in-its-tap-water>

Based on this it sounds like at least one family might have had a child with elevated lead blood levels, which might or might not have come from the water. Sounds like the issue is old lead service lines, but there seems to be some difference of opinion on appropriate testing methods.

I'd send this over to Linda Dykema, Wes Priem and Nancy Peeler for their comments.

DEQ has jurisdiction over municipal water supplies, but we do have a program to follow-up on children with elevated blood lead levels, so I think it would be appropriate for the folks above to discuss the situation and recommend any action.

Mark

### **Updated summary report on Flint blood lead level data now available**

LANSING, Mich. – The Michigan Department of Health and Human Services today issued its bi-weekly summary report on lead testing in Flint. Preliminary data indicate that 43 of 2,182 adults and children tested had elevated blood lead levels since Oct. 1.

“In partnership with the Genesee County Health Department, we are working to engage and provide resources to residents to reduce all potential exposures to lead,” said Dr. Eden Wells, MDHHS chief medical executive. “Case management and home lead analysis are available for families in which an elevated blood lead level has been detected.”

The first MDHHS summary report on blood lead levels in Flint was issued Dec. 3, 2015. Updated reports are posted on a bi-weekly basis on the [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater) website. After refining our methods to identify age, some people are now counted in a different age group than on previous reports. The total counts for each year have not changed.

The report includes both capillary and venous blood tests, and people who have had multiple tests are counted only once. Tests and their results cover the time since the state action plan was put in place on Oct. 2, and capture the number of elevated blood lead levels greater than 5 micrograms

per deciliter.

MDHHS, together with the Genesee County Health Department (GCHD), is working with local partners to distribute educational information around lead testing and prevention. Supplemental state dollars are funding GCHD nurses to work with families when an elevated blood lead level is detected.

Families with an elevated blood lead level can also choose to have a nurse coordinate an environmental health investigation in their home to help identify lead exposures, which could be lead from paint, soil, plumbing, and other sources. Families with questions about their blood lead levels or test results are also encouraged to contact their primary care physician or local health department.

In addition to mandated testing at ages one and two for the Medicaid population, MDHHS is coordinating with its Medicaid health plans and provider communities to recommend blood lead testing for any child younger than six years of age in Flint who has not previously been tested. The state, in coordination with GCHD, developed and issued a Health Alert Network (HAN) notification for local providers to help ensure consistent messaging and protocols among primary care providers.

Free water filters and replacement cartridges are available to Flint residents. For a full list of locations and hours of distribution, or to view the full blood lead level report, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater). The summary will be updated as more data becomes available.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its [YouTube channel](#). For this and other updates, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

Nick,  
Please see our call to state, Genesee officials on lead levels in kids in Flint due to the water situation. This is serious to pediatricians and to the children we serve. We need an aggressive action from MDHHS and local folks .  
Please let me know how we might collaborate.  
Thanks.  
Denise

**FOR IMMEDIATE RELEASE:** December 11, 2015

**CONTACT:** Jennifer Eisner, (517) 241-2112

### **MDHHS releases latest round of Flint blood lead level data**

LANSING, Mich. – The Michigan Department of Health and Human Services today issued its newest summary report on lead testing in Flint. According to preliminary data, 39 of 1,836 adults and children tested had elevated blood lead levels since Oct. 1.

“As testing continues, our focus remains on helping families reduce all potential exposures to lead,” said Dr. Eden Wells, MDHHS chief medical executive. “We are working closely with the Genesee County Health Department to provide information and offer tools in the community, and encourage families to explore the resources that are available to them.”

Both capillary and venous blood tests are included in the report, and people who have had multiple tests are counted only once. Tests and their results cover the time since the state action plan was put in place on Oct. 2, and capture the number of elevated blood lead levels greater than 5 micrograms per deciliter.

MDHHS is working closely with local partners to offer resources and distribute important lead testing and prevention information. Additional state funding has allowed for Genesee County Health Department (GCHD) nurses to work with families when an elevated blood lead level is detected. These families can also choose to have the nurse coordinate an environmental health investigation in their home to identify lead exposures, which could be lead from paint, soil, plumbing, and other

sources.

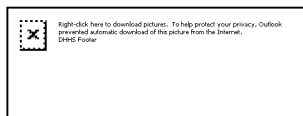

To support these efforts, the state is coordinating with its Medicaid health plans and provider communities on enhanced screening and testing. In addition to mandated testing at ages one and two for the Medicaid population, MDHHS has recommended blood lead testing for any child younger than six years of age in Flint who has not previously been tested. The state, in coordination with GCHD, developed and issued a Health Alert Network (HAN) notification for local providers to help ensure consistent messaging and protocols among primary care providers.

Free water filters and replacement cartridges are still available to Flint residents. For a full list of locations and hours of distribution, or to view the full blood lead level report, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater). The summary will be updated as more data becomes available.

To help residents properly install water filters, and to demonstrate how to replace the original when it expires, MDHHS has created an instructional video on its [YouTube channel](#). For this and other updates, visit [www.michigan.gov/flintwater](http://www.michigan.gov/flintwater).

# Background & Secondary Prevention

Mona Hanna-Attisha MD MPH FAAP  
Hurley Children's Hospital  
Michigan State University College of Human Medicine

# Agenda

- Flint Water Timeline
- Lead Facts
- Hurley Research Findings
- Introduction to Toxic Stress
- Next steps – Secondary Prevention

# Flint Drinking Water Crisis

- Financial Emergency Managers
- Water switch to Flint River (April 2014)
- Fecal coliform and boil advisories \*3 (Sept 2014)
- GM stopped using Flint water – corroding parts (Oct 2014)
- Disinfectant byproducts TTHM (Jan 2015-Sept 2015)

# Flint Drinking Water Crisis

- Perfect storm for lead leaching
  - Flint water more corrosive
  - Lack of corrosion control
  - Aging infrastructure (lead plumbing)
  - Decreased water use - population loss, high water rates

# Flint Drinking Water Crisis

HURLEY  
CHILDREN'S  
HOSPITAL

- High lead levels detected, EPA contacted (February 2015)
- Leaked EPA memo (June 2015)
  - LeeAnn Walters WLL 13,200 ppb (toxic waste)
- Dr Marc Edwards, Virginia Tech Research (Aug 2015)
  - Flintwaterstudy.org
  - Corrosion & water lead
- Hurley Research (Sept 2015)

# Why do we care about lead?

- Lead is a potent neurotoxin with lifelong, multigenerational impacts
- Blood lead levels (BLL) 5 ug/dL or more considered elevated blood lead levels (EBLL)
- Just a few years ago (2012), 10 ug/dL was cutoff
- NO safe blood lead level
- Disproportionately impacts low income and minority children
- Primary prevention is most important

# Primary Prevention

- “Because no measurable level of blood lead is known to be without deleterious effects, and because once engendered, the effects appear to be irreversible in the absence of any other interventions, public health, environmental and housing policies should encourage PREVENTION of all exposure to lead.”

“Low Level Lead Exposure Harms Children: A Renewed Call for Primary Prevention.” 2012 CDC Advisory Committee on Childhood Lead Poisoning Prevention.

# Impact on cognition

- Vast evidence supports increased likelihood of:
  - Decrease in IQ
    - An increase in BLL from 1 to 4 ug/dL, drops mean IQ -3.7 points
  - Small change in mean IQ, shifts entire population IQ distribution
    - Reduces high achievers IQs (>130) and increases kids with low IQs (<70)
    - Implications for early intervention, special education services, employment, incarceration, life achievement, etc

Lanphear BP et al., Low-level environmental lead exposure and children's intellectual function: an international pooled analysis. Environ Health Perspect, 2005. 113:894-9.

Fewtrell LJ, Pruss-Ustun A, Landrigan P, and Ayuso-Mateos JL, Estimating the global burden of disease of mild mental retardation and cardiovascular diseases from environmental lead exposure. Environmental Research, 2004. 94:120-33.

# Impact on behavior

- Increased likelihood of :
  - ADHD behaviors
  - Delinquent behaviors and arrests
  - Total arrests and increased rates of arrests involving violent offenses
- Other health effects: hematologic, cardiovascular, immunologic, endocrine, etc

Wright, JP, KN Dietrich, MD Ris, et al. 2008. Association of prenatal and childhood blood lead concentrations with criminal arrests in early adulthood. *PLoS Med* 5(5): e101

Chen, A, B Cai, KN Dietrich, et al. 2007. Lead exposure, IQ, and behavior in urban 5-7 year-olds: Does lead affect behavior only by lowering IQ? *Pediatrics* 119(3): e650-e658.

Needleman, HL, C McFarland, RB Ness, et al. 2002. Bone lead levels in adjudicated delinquents: A case control study. *Neurotoxicology and Teratology* 24(6):711-717.

# Cost

- “For childhood lead poisoning, \$5.9 billion in medical care costs, as well as an additional **\$50.9 billion** (sensitivity analysis: \$44.8–\$60.6 billion) per year in lost economic productivity resulting from reduced cognitive potential from preventable childhood lead exposure.”
- “The present value of Michigan’s economic losses attributable to lead exposure in the 2009 cohort of 5 year-olds ranges from \$3.19 (using U.S. blood lead levels) to **\$4.85 billion** (using Michigan blood lead levels) per year in loss of future lifetime earnings.”

Leonardo Trasande and Yinghua Liu. Reducing The Staggering Costs Of Environmental Disease In Children, Estimated At \$76.6 Billion In 2008. *Health Affairs*, 30, no.5 (2011):863-870

The Price of Pollution: Cost Estimates of Environment-Related Childhood Diseases in Michigan. 2010 Report by Michigan Network of Children’s Environmental Health

# Lead in Water

- Not what medicine/public health used to
  - Lead paint obsessed
  - “drinking through a lead painted straw”
- Soluble metal – ingestion via particulate or dissolved in water
- Drinking and cooking risks

# Lead in water

- Disproportionally impacts developmentally-vulnerable formula-fed infants
  - For about 25% of infants drinking formula made from tap water at 10 ppb, blood lead would rise  $\geq 5$  ug/dL
- Significant risk to unborn babies
  - Increase in fetal deaths and reduced birth weights

Triantafyllidou, S., Gallagher, D. and Edwards, M. Assessing risk with increasingly stringent public health goals: the case of water lead and blood lead in children. Journal of Water and Health. doi: 10.2166/wh.2013.067 58-68 (2014).

Edwards, M. Fetal Death and Reduced Birth Rates Associated with Exposure to Lead-Contaminated Drinking Water. Env. Sci. and Tech. 2013 DOI: 10.1021/es4034952

# Hurley Children's **RESEARCH FINDINGS**

**Sept 24**

**Medical Community Press Conference**

# Methods

- HMC IRB approved
- Data from all blood lead levels processed at Hurley Medical Center
- ZIP code based
- Two periods of comparison (same seasons):
  - PRE-SWITCH: January 1, 2013 – September 15, 2013
  - WATER SWITCH APRIL 26, 2014
  - POST-SWITCH: January 1, 2015 – September 15, 2015
- Analyzed % Elevated Blood Lead (EBLL)
  - EBLL = Blood lead Levels  $\geq$  5 ug/dL

# Initial Research Results

- Zip code based (in media)

	<b>ALL FLINT ZIPS (n=1746)</b>	<b>HIGH-WLL FLINT ZIPS (48503-48504) (n=742)</b>	<b>NON- FLINT ZIPS (n=1670)</b>
<b>PRE-SWITCH</b>	<b>2.1%</b>	<b>2.5%</b>	<b>0.6%</b>
<b>POST- SWITCH</b>	<b>4.0%</b>	<b>6.3%</b>	<b>1.0%</b>

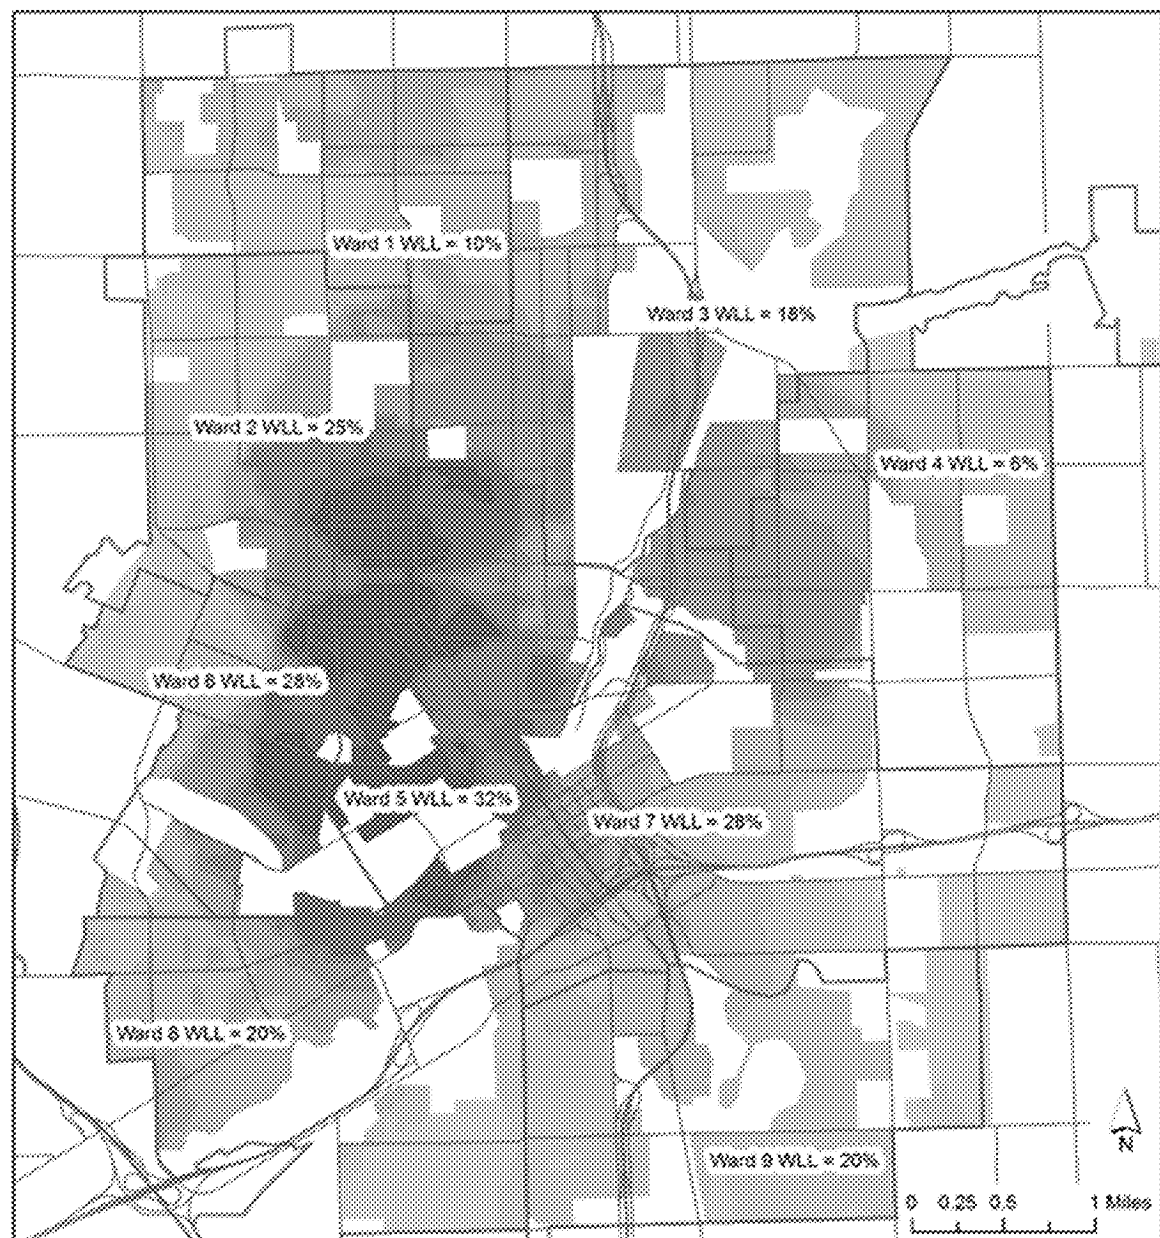

# GEOcoded Analysis

- N= 1473 for Flint water children (pre n=736, post n=737)
- N= 2202 for non-Flint water children (pre n=1210, post n=992)

## **Flint results for children 5 years and under:**

- PRE-SWITCH % EBLL: **2.4%**
- POST-SWITCH % EBLL: **4.9%**
- **$p < 0.05$ ; STATISTICALLY SIGNIFICANT CHANGE**

Flint City Wards  
Major Streets  
"Ward Y WLL = XX%" → % of ward where any water sample exceeded 15 ppb

Predicted BLI based on Ordinary Kriging Geostatistical Analysis

0.7 - 0.75  
0.76 - 1

1.01 - 1.25  
1.26 - 1.5  
1.51 - 1.75  
1.76 - 2  
2.01 - 2.25  
2.26 - 2.5  
2.51 - 2.75  
2.76 - 3.36

\*Non-residential zones screened from results

- Focus on high WLL wards (5, 6, 7); ie., those with high water lead levels

## Results:

- PRE-SWITCH % EBLL: 4.0%
- POST-SWITCH % EBLL: 10.6%
- $p < 0.05$ ; **STATISTICALLY SIGNIFICANT CHANGE**

- Note: Hot spots between wards/zips

0.78-1

	1.01 - 1.25		2.01 - 2.25
	1.26 - 1.5		2.26 - 2.5
	1.51 - 1.75		2.51 - 2.75
	1.76 - 2		2.76 - 3.00

## WATER AGE & WATER SAMPLE LOCATION MAP

January 21, 2015

# Pre/Post EBLL

Comparison of Pre/Post EBL Percentage

\*p<0.05

# Research results

- % of children with EBLL in Flint zips increased
  - Most striking increase in areas with highest water lead levels
- **Results significantly underestimate exposure:**
  - Infants not screened for lead
  - BLL may have peaked before being measured (blood half life 20-30 days)
  - Kids exposed in different settings throughout city
- Widened disparities
- Failure of primary prevention

# What happened next?

- Sept 25 City of Flint Lead Health Advisory
- Sept 29 GCHD Health Advisory
- Oct 1 GCHD Public Health Emergency
- Oct 2 State filter program, increased water testing, expedited corrosion control
  - Oct 3 First filter distribution
- Oct 8 Three schools toxic WLL, announced reconnection to DWSD
- Oct 16 Water switched back to DWSD

# Epigenetics

## Wayne State Researchers Discover Evidence That Lead Exposure in Mothers Can Affect Future Generations

Released: 2-Oct-2015 3:05 PM EDT

Source Newsroom: Wayne State University Division of Research

“A team of researchers at Wayne State University have discovered that mothers with high levels of lead in their blood not only affect the fetal cells of their unborn children, but also their grandchildren. “

HURLEY  
MEDICAL CENTER

# Now

HURLEY  
CHILDREN'S  
HOSPITAL

- Preventable population-wide exposure
- Community traumatized
- Loss of trust in government and agencies
  - In 2015, in the middle of the great lakes, no guarantee of safe drinking water
- Ongoing public health emergency

HURLEY  
MEDICAL CENTER

# Exposed Population

- Currently identifying/labeling exposed population
- Cohort includes all children less than 6 years who at any time lived in Flint water limits (geocoded) from April 2014 to end date unknown (extend 9 months for fetal exposure).
- Per census data, approx. 8,000-9,000 children

# Quick Introduction to ACEs/Toxic Stress...

# Adverse Childhood Experiences (ACEs)

- ACEs are potentially traumatic events that can have negative, lasting effects on health and well-being.
  - Also referred to as toxic stress or childhood trauma.
  - As number of ACEs increase, the risk for health problems increase in a strong and graded fashion.
  - An ACE score of 6 or more results in a 20 year decrease in life expectancy.
- 
- CDC ACE study
    - Kaiser Permanente from 1995 to 1997 with more than 17,000 participants.

## Secondary Prevention

- Medical/Health
- Nutrition
- Education
- Caregiver capacity
- Water quality

# Secondary Prevention

## *Medical/Health*

- Support and education for primary care providers regarding aggressive long-term neurodevelopmental screening & testing
- Improve access to Developmental and Behavioral (DBP) specialists, pediatric psychologists, pediatric psychiatrists
  - Preemptive referral to mental health/toxic stress screening
  - Support capacity building and/or incentivize recruitment to allow Genesee Health System (CMH) to build this capacity which is currently needed and lacking
- Increase recognition and education regarding trauma informed care, social determinants of health (SDOH)
- Consider health fund/enrollment in Children's Special Health Care Services (CSHCS) for exposed kids to cover long-term needs

# Secondary Prevention Medical/Health

- Expand state-funded Genesee Health System (CMH) services
  - Infant Mental Health (30 capacity)
  - Child case management
  - Home-based services
  - Trauma informed care – trauma focused CBT

# Secondary Prevention

## *Medical/Health*

- Role of Medicaid HMO plans:
  - Support to drive patients to medical home: enhanced transportation, case management, HEDIS monitoring, pt incentives, mental health access, etc
  - Reimbursement for integrated social work, registered dietitian, mental health services, OT/PT services
  - Encourage collaboration/mandate support of Genesee Children's Healthcare Access Program (CHAP)

# Hurley Children's Clinic

*Thinking Outside The Box*

HURLEY  
CHILDREN'S  
HOSPITAL

- Transportation
- Social work
- WIC RD/Nutrition
- Peds Psychology
- Training site

HURLEY  
MEDICAL CENTER

# Secondary Prevention

## *Nutrition*

- Short-term mitigation/protection
  - Promotion/education of Iron, Calcium, Vit C diets
- Promote enrollment and participation in pre-existing nutrition resources (WIC, SNAP, DUFB, MTA)
- Expand WIC eligibility, access (co-locate with PMD), benefits

# Secondary Prevention

## *Nutrition*

- Improve food access/security efforts via subsidies, pilots – grocery stores, mobile groceries, urban farming, etc
  - Buy/limit liquor licenses
- Invest in breastfeeding promotion, education, and support services

# Secondary Prevention *Education*

- Subsidize quality childcare options
- Automatic referral/assessment by Early Intervention (Early On)
- Enroll all in early head start, head start
  - Universal Pre-school/Flint Pre-Promise
- Strengthen special education capacity/trained personnel

# Secondary Prevention *Education*

- Invest in school health/wellness/behavioral health
  - School nurse:student ratio – MI ranked worst in country
  - 1:750 recommended
  - 1:6,500 Flint
- Place MDHHS employee at every school
- Model lead safe school campaigns
  - Proactive water testing, lead plumbing investigations
  - Lead mitigating school nutrition

# Investing in Children: Younger The Better

HURLEY  
CHILDREN'S  
HOSPITAL

## Rates of Return to Human Capital Investment at Different Ages: Return to an Extra Dollar at Various Ages

# Secondary Prevention

## *Caregiver capacity*

- Toxic stress and resilience
  - “Strong, frequent, and/or prolonged activation of the body’s stress-response system in the absence of the **buffering protection of a supportive, adult relationship.**”

Shonkoff, J & Garner, A. (2012) The lifelong effects of early childhood adversity and toxic stress. *Pediatrics*, 129(1). 232-246.

# Secondary Prevention

## *Caregiver capacity*

- Need to support parents and programs to improve parenting skills
- Evidence-based parenting programs

  - Triple P
  - Everyday Parenting
  - Adventures in Parenting
  - Home visiting programs
  - Strengthening Families Framework
  - Maternal Infant Health Program (MIHP)
  - Healthy Start
  - Nurse Family Partnership (NFP)

# Nurse Family Partnership

- 56% reduction in emergency room visits for accidents and poisonings in the second year of the child's life
- 50% reduction in behavioral problems when the children enter school.
- 48% reduction in state-verified reports of child abuse and neglect by child age 15
- 39% fewer healthcare encounters for injuries or ingestions in the first two years of life
- Increase in language scores

# Secondary Prevention

## *Caregiver capacity*

- Increase support for state-funded NFP, Healthy Start and MIHP
  - Hurley-run NFP capacity for 100

# Secondary Prevention

## *Water Safety/Infrastructure*

- Opportunity to model best practices for lead in water monitoring to protect public health rather than a focus on minimum compliance
  - EPA Flint Safe Drinking Water Taskforce
- Flint will change water source and treat water again once connected to KWA (2016), should not be rushed
- Full lead plumbing replacement (can be targeted)

# Next Steps

- Primary prevention failed
  - Preventable population-wide exposure
- Secondary prevention must be priority
- Invest and prioritize in evidence based interventions that mitigate exposure and build childhood resilience
  - Ages 0 to 6 years critical for life course trajectory

# Top Five Interventions

1. Support for emergency response
2. Increase funding/capacity for home visiting maternal-infant support programs
3. Guarantee Flint Pre-Promise (3-5 year quality early education)
4. Fund RN in every Flint school
5. Encourage innovative Medicaid HMO plan and medical home initiatives (ie: CHAP)

## Michigan Health Department Hid Evidence of Health Harm Due to Lead Contaminated Water: Allowed False Public Assurances by MDEQ and Stonewalled Outside Researchers

[December 21, 2015 Siddhartha Roy Articles](#)

After missing warning signs of spiking childhood lead poisoning that occurred a few months after switching to a corrosive river water source in 2014, outside pressure forced officials at the Michigan Department of Health and Human Services (DHHS) to closely scrutinize their data in July 2015. They discovered scientifically conclusive evidence of an anomalous increase in childhood lead poisoning summer 2014 immediately after the switch in water sources, but stood by silently as MDEQ officials repeatedly and falsely stated that no spike in blood lead levels (BLL) of children had occurred. DHHS employees later stonewalled efforts by outside researchers who questioned MDEQs statements, withheld damning documents but released incomplete data suggesting that there were no problems—DHHS officials ultimately fessed up only after incidence of childhood lead poisoning skyrocketed **above 10% in the two Flint zip codes with highest water lead risk during summer 2015!**

### DHHS Pressured to Examine Data in mid-July 2015

DHHS' engagement in the Flint water crisis, started in early 2015 with two phone calls from Lee-Anne Walters to a state lead poisoning nurse in Lansing identified only as "Karen." When asked about the phone call last night, Walters said she was at first expressing concern over high water lead measurements in Flint, but on the second call she was in tears because her son's blood lead had increased to 6.5 ug/dL.

According to Walters, "Karen" stated that ***"He is barely lead poisoned. If CDC had not changed their lead poisoning standard from 10 down to 5, we would not be having this conversation."*** Angry, Walters protested that Karen was minimizing the problem, at which point "Karen" cut her off and

said ***“I am working with kids in their 40’s and 50’s. It is just a few IQ points...it is not the end of the world.”*** FOIA e-mails demonstrate that Karen Lishinski (DHHS) acknowledged receiving phone calls on the dates Walters called (the caller’s name is redacted in the FOIA), but elsewhere Lishinski acknowledges to colleagues that the last time she actually worked with a child who had blood lead above 45 ug/dL was in 2009.

The next time the Flint water issue was apparently raised at DHHS, was July 23<sup>rd</sup>, when Linda Dykema (DCH) sent out an e-mail titled ***“R.E.Director’s Office Assignment- Flint- need update ASAP”*** on the heels of the memo written by EPA’s Miguel Del Toral.

### **Misinformed from the Outset: MDEQ Garbage-in All but Ensures DHHS Garbage-out**

The Director’s Office update was tainted and probably doomed from the start, because Dykema logically reached out to MDEQ’s Steve Busch for background who provided her the following insights:

***“The city of Flint recently conducted drinking water testing throughout the city with special attention to those areas known to have old service lines. The city water supply is in compliance with the lead rule....DEQ has not seen a change in the city’s compliance with the lead rule since switching to the Flint River source....Regarding the home with high drinking water lead levels: some years ago the supply line that serves the neighborhood was replaced, but somehow this house was not connected to the new line, such that the family’s drinking water supply was coming from the old corroded lead pipe. None of the neighbors water had elevated lead level... Regarding the EPA drinking water official quoted in the press articles: the report that he issued was a result of his own research and was not reviewed or approved by EPA management. He has essentially acted outside his authority.”***

In other words, Dykema and DHHS started out their investigation with demonstrably false MDEQ talking points as assumptions. Nonetheless, a team of researchers proceeded to examine their data for possible increased incidence of lead poisoning in Flint’s children after the water switch.

### **Anomalous Increase in Lead Poisoning Noted—But False Conclusion Provided Publicly by MDEQ**

The DHHS team immediately found evidence of a problem. Specifically, in the summer months of July, August and September of 2014 immediately after the

switch, blood lead levels in Flint had been much higher than normal. On July 27<sup>th</sup> of 2015, an e-mail asked “can you quickly run any tests to see if the difference in the first graph is statistically significant,” and the result quickly came back that it was. The team tried to re-run the data adding extra years to see if it changed the conclusions, but it did not because “there does appear to be a higher proportion of EBLL <lead poisoning> last summer than usual.”

A July 28<sup>th</sup> e-mail summarized the exercise by noting “***This doesn’t say anything about causality, but it does warrant further investigation***” and a two page memo was created for the Director’s Office (see excerpt Figure 1). The “***quick detection of abnormal variation***” in July, warranting further investigation, does not seem to have gone any further, and the study results did not see the light of day until this FOIA request.

However, MDEQ’s Brad Wurfel did publicly begin stating that study had been done, and using the results for public relations purposes as early as September 6<sup>th</sup>, 2015. Ironically, it was used to discredit data on high lead in water collected by Virginia Tech:

*“...state officials are questioning the Virginia Tech findings. “The samples don’t match the testing that we’ve been doing in the same kind of neighborhoods all over the city for the past year,” says Brad Wurfel, a state Department of Environmental Quality spokesman. Wurfel says DEQ has conducted two rounds of testing in the past year. He adds that the Department of Community Health conducts its own blood level lead testing in Flint. “With these kind of numbers,” Wurfel says, “we would have expected to be seeing a spike somewhere else in the other lead monitoring that goes on in the community.”*

In other words, Wurfel was completely misrepresenting the conclusions of the DHHS July 2015 blood lead study—to claim there was no spike in children’s blood lead when there was one. The FOIA does not reveal precisely where, or how, Wurfel was so misinformed. But the record is also perfectly clear that DHHS sat silently by as Wurfel repeated the false statements throughout the month of September.

## RESULTS:

- Figure 2 shows that—on average—there appears to be a higher proportion of EBLL during the summer months of July, August, and September.
- However, even compared to the previous three years, the proportion was highest during summer 2014 (Figure 2).
- Based on the control chart for proportions (Figure 3), only the summer months of July, August, and September had proportions of EBLL higher than that of the average variation over time.
- Further, the summer months of 2014 were the only data points above the average (mean) of the control chart in April 2015 with EBLL proportions above the average (mean) of the control chart (Figure 3).

## CONCLUSION:

- Based on the results depicted in Figure 3, positive tests for EBLL were higher than the average for children under age 16 living in the City of Flint during the months of July, August, and September, 2014.
- However, it's important to note that the purpose of control chart is to detect the quick detection of abnormal variation—not to construct a case.

**Figure 3. Control Chart of Proportion of Children Tested for Lead Poisoning with Elevated Blood Lead Levels, May 2010 to September 2015.**

Figure 1 – Excerpt from a two page memo in July 2015 indicating Summer months of 2014 when lead levels in Flint kids spiked

### **Outside Researchers Asking to Analyze Flint's Blood Lead Data Were Stonewalled: "Yikes!"**

On September 2<sup>nd</sup> 2015, Professor Marc Edwards of Virginia Tech (primary author of this article and source of the Freedom of Information Act documents cited herein) made a simple data request of DHHS. Edwards had previously made an identical request in November 2006 for a blood lead study in Lansing, and that data was provided without any problems. Edwards did not expect problems this time.

His request sat without response until a reminder e-mail was sent, at which point DHHS employee Robert Scott apologized for the delay, and provided the information needed to process the request, acknowledging:

***Yes, I think this <study> sounds great. There has been some concern about the water source change in Flint, and in fact we had a call about it today.***

The request then sat another 3 days, at which point Edwards inquired again and DHHS said that they were busy and if Edwards wanted the data in ***"a week rather than a month or so-then please send me a paragraph explaining why."*** Edwards wrote:

***Yes, I think there is clearly some urgency to the situation. MDEQ has publicly stated that your blood lead records, are showing that there is no public health concern for residents in Flint. The levels of lead in Flint water, that we are finding in our water sampling, are certainly in a range that can cause childhood lead poisoning. Indeed, one child has already, likely been lead poisoned from exposure to high lead in water. I think the fact that you already have other teams working on these records, indicates a high level of interest, and urgency. Congressional interest in the safety of the water is also very high, and this will be an important issue in deciding options for treating the water, in the weeks and months ahead.***

If red flags about the data request had not already gone up, the e-mails clearly show alarms were raised immediately throughout all of DHHS after Scott wrote to colleges at 1:09 pm on September 11, 2015 that:

***"The attached was submitted to me along with a request for de-identified data, which should be no problem. When you have a few***

***minutes you might want to take a look at it. Sounds like there might be more to this than what we learned previously. Yikes!."***

A flurry of e-mails followed, and within the hour, Edwards request that Scott had just said "***should be no problem,***" was in fact encountering all kinds of problems. Specifically, a privacy specialist immediately asked for (amongst other things):

***"I want to know more about the study..Saying that the researcher wants to verify the claim of MDEQ is not sufficient.... It does not have to be a great deal longer, but it should explain what the intended use of the blood lead data is. It is also important to know exactly how it will be used for research in order to justify the release...."***

The next few weeks were an exercise in frustration, during which it became perfectly apparent to Edwards that DHHS had no interest in fulfilling the routine data request.

In the meantime, emails during the same time period indicate that the state had plenty of time scrutinizing the Virginia Tech data (e.g., "The issue has been ongoing on for awhile now, but picked up steam in July when the Virginia Tech folks got involved."). Moreover, Dr. Mona Hanna-Attisha of Hurley Medical Center had made her own data request in mid-September, and she was having trouble getting it processed as well. Edwards wrote to DHHS on September 24th:

***I just spoke to this young researcher at Hurley, and apparently, she has been unable to get access to the state blood lead records. I have to say, it is very disturbing that the state keeps issuing these blood lead reports and statements in their press releases, and refuses to share the data backing them up with outside researchers. Even worse, state reps are running around claiming that these reports are proof that Flint water is safe to drink. Can you tell me why it is so difficult to get this data, and why your agency is raising so many obstacles to sharing it with everyone who asks? I note that I have been asking to see your data since MDEQ first sent it to reporters back in August, and I count 10 e-mails that I sent responding to all your questions. As of yet, you have given me nothing in response. Yet you have been sending reporters one report after another. It seems your agency is more interested in public relations than sound science.***

DHHS Scott immediately wrote to colleagues claiming "***I'm not very happy with him <Edwards> right now,***" and drafted a response that apologized for delays, his vacation, and acknowledging "***my time has been largely***

***taken up with my Department's response to the current situation in Flint.***" Hence, the FOIA reveals that DHHS had created their own catch-22: because they had stood and said nothing while MDEQ made false claims about what the blood lead data showed, they had no time to provide data to researchers that wanted to test the truthfulness of the claim.

Scott's DHHS colleague Nancy Peeler asserted that Edwards e-mail had ***"intent to escalate and spin things,"*** and that he (Scott) should not get "caught up in that." After reading the response, Edwards withdrew his request with a plea to let Hanna-Attisha have access to the state's data, and within an hour the two DHHS employees were congratulating one another on their success:

DHHS Peeler to DHHS Robert Scott: ***"Really nice email, thanks."***

DHHS Scott to DHHS Peeler: ***"Thanks-he sent a couple of responses that I'll share on Monday. 😊"***

An Agency ***"more interested in public relations than sound science."***

Three sets of e-mails involving Peeler and Scott, sent within a day of the above exchange, illustrate the unethical behavior occurring within DHHS at the time—all in the name of public relations and at the expense of sound science.

***1) "I'm Sure This One Is Not for the Public."*** Unbeknownst to Edwards, the day before he asserted in writing that DHHS was behaving unethically by hiding results to help cover up the problem and discredit the findings of Hurley's Mona Hanna-Attisha—they were doing just that. At 3:45 pm on September 24<sup>th</sup>, Scott wrote an e-mail entitled ***"One more attempt to recreate Hurley."*** The e-mail confirmed that Mona-Hanna Attisha's analysis showing that blood lead had spiked after the switch to Flint River was verified with the DHHS data. But he also noted that ***"I'm sure this one is not for the public."*** When informed that DHHS had knowledge supporting her analysis late last night, Hanna-Attisha confirmed that the state never did share those results with her—rather, the record shows DHHS was working full time to attack the idea there was any problem with childhood lead poisoning in Flint.

***2) DHHS Sends Scrubbed Data to Edwards, Hanna-Attisha and Dr. Reynolds (Mott Children's Health Center): But Withholds Damning July Report.*** In response to Edwards request for the final data that supporting Brad Wurfel's months of assertions that blood lead was not increase, Scott provided both Edwards and Hanna-Attisha with documentation. Unfortunately, it was not the final DHHS memo from late July—that report demonstrated that DHHS knew of a serious lead spike that occurred in summer of 2014. Instead,

Scott sent a revised version of the data that had been created just two days before, which had no mention of the statistically significant spike in childhood lead poisoning. Likewise, responding to an earlier request from Dr. Reynolds, DHHS considered sending the July report sent to the Directors Office and Governor, but instead sent a revised version of the data with no hint of problems with blood lead in Flint's children.

**3) Peeler's "Secret Hope" is Granted to Handle Free Press Reporter.**

Reporter Kristi Tanner from the Detroit Free Press was doing her own analysis of the Flint blood lead trends. Repeating the approach of Hanna-Attisha using DHSS data, comparing incidence of lead poisoning before to after the water switch, Tanner demonstrated a statistically significant increase in childhood lead poisoning. A flurry of DHHS e-mails to handle her analysis, went back and forth in DHSS—none of it considered acknowledging that she was correct. After all, Scott's analysis showing the same thing, was surely ***"not for the public."*** Instead, the following exchange occurred between Peeler, Scott and DHHS public relations.

DHSS Peeler to DHSS Scott (September 25, 2015 1:20 pm):

***"I think Bob is the best person to speak to them about the lead data, if you are comfortable with that Bob. My secret hope is that we can work in the fact that this pattern is similar to recent past. 😊"***

DHSS Scott promptly delivered a quote (9/25/2015 1:19 pm):

***"While the trend for Michigan as a whole has shown a steady decrease in lead poisoning year by year, smaller areas such as the city of Flint have their bumps from year to year while still trending downwards overall. Does that sound reasonable?"***

Public Relations to Robert Scott (DHSS) (9/25/2015 1:36 pm):

***"I like what you had to say. That's basically what I told her, but she wants to hear it from someone other than a spokesperson. 😊 Are you available for a call with her."***

The smiley and happy faces inserted in the above e-mails, are indeed part of the original documents. To her credit, Tanner did not buy the states arguments, but did note the DHHS conclusion that the increase was ***"seasonal and not related to the water supply."***

## Also “Not for the Public:” Data That Caused the State to Admit They Were Wrong.

By October 2<sup>nd</sup>, the DHHS finally acknowledged that there was a serious problem in Flint. It confirmed that children living in the two zip codes (48503 and 48504) identified by Virginia Tech as having highest lead in water risks, also had increased incidence of childhood lead poisoning after the switch to Flint River. Just as Hurley’s Mona—Hanna Attisha had asserted. But they have never, to date, publicly released their in-house data demonstrating the extent of the problem.

Our FOIA reveals a shocking DHHS graph created in October 2015. It shows the statistically significant spike in blood lead that occurred in summer 2014– the scientific result that DHHS has never publicly acknowledged. Even more horrifying, it also shows blood lead skyrocketing in summer of 2015, to the point where 9.5-12.5 percent of children in Flint’s two high risk zip codes were lead poisoned. This is in the range of Hurley’s more recent estimate that incidence of childhood lead poisoning in some neighborhoods was as high as 15%. It goes without saying, surely, that this data was also “not for the public.”

Figure 2: DHHS graph showing skyrocketing blood lead in 2nd and 3rd quarter of 2015, in two Flint zip codes identified by Virginia Tech as having highest water lead risk

### FOIA Response Delayed by False Claims of “Litigation Hold” and “Attorney Client Privilege.”

DHHS fought hard to delay release of these documents. After the legal time allowed for FOIA elapsed, and Edwards had paid for the request, DHSS fabricated claims of a “Litigation Hold” and “Attorney Client Privilege” as cause for further delays. We want to publicly thank Nancy Kaffer for pointing out the absurdity of these claims. We are also deeply indebted to Senator Ananich and his staff, who fought for release of these documents to us late Friday night.

MDHHS emails obtained via FOIA requests regarding blood lead levels of kids in Michigan, specifically in Flint

[Download \(PDF, 8.94MB\)](#)

These are the first batch of emails. We will possibly be releasing a second set sometime in January.

Michigan Department of Health and Human Services

## RESULTS:

- Figure 2 shows that—on average—there appears to be a higher proportion of first-time EBLL during the summer months of July, August, and September.
- However, even compared to the previous three years, the proportion of first-time EBLL is highest during summer 2014 (Figure 2).
- Based on the control chart for proportions (Figure 3), only the summer months of July, August, and September had proportions of EBLL higher than that expected from random variation over time.
- Further, the summer months of 2014 were the only data points between May 2014 and April 2015 with EBLL proportions above the average (mean) of the previous three years (Figure 3).

## CONCLUSION:

- Based on the results depicted in Figure 3, positive tests for EBLL were higher than usual for children under age 16 living in the City of Flint during the months of July, August, and September, 2014.
- However, it's important to note that the purpose of control charts is to monitor data for the quick detection of abnormal variation—not to construct a case for causality.

### **Virginia Tech Researcher Claims Stonewalling On Lead Data**

The Department of Health and Human Services had data that showed there were elevated lead levels in Flint's water, but delayed in releasing that data to others for review, Virginia Tech professor Marc Edwards said in an article posted to his website documenting the city's water crisis.

Department officials agreed and said the experience led to changes in how they examine data.

Mr. Edwards said the department had data from shortly after Flint changed its water source that showed a spike in blood lead levels in children in two at-risk neighborhoods, but did not disclose that data until September 2015.

"They discovered scientifically conclusive evidence of an anomalous increase in childhood lead poisoning in summer 2014 immediately after the switch in water sources, but stood by silently as Michigan Department of Environmental Quality (MDEQ) officials repeatedly and falsely stated that no spike in blood lead levels (BLL) of children had occurred," he said in the post.

DHHS spokesperson Jennifer Eisner agreed the department had data that showed the spike, but said its analysis at the time overlooked factors that, in retrospect, would have shown there was a water quality problem.

"When initially looking at the citywide and county elevated blood lead level numbers, the increase appeared to be consistent with the seasonal fluctuation seen in the summer months," Ms. Eisner said. "It wasn't until the Hurley report came out that our epidemiologists took a more in-depth look at the data by ZIP code, controlling for seasonal variation, and confirmed an increase outside of normal trends. As a result of this process, we have determined that the way we analyze data collected needs to be thoroughly reviewed."

Mr. Edwards said DHHS officials also stonewalled him on getting access to that data.

He said data he had gotten easily in 2006 documents for a similar review took several weeks to receive after his request sent September 2. When he did finally receive the data, he said it was a version that omitted the lead level spike from summer 2014 that the department had created in July.

He said a series of emails he received under a recent Freedom of Information Act request showed an intention by DHHS officials to keep the reports from the public.

"Our FOIA reveals a shocking DHHS graph created in October 2015. It shows the statistically significant spike in blood lead that occurred in summer 2014 - the scientific result that DHHS has never publicly acknowledged," Mr. Edwards said in his post.

Ms. Eisner said the department has worked to make the data available. "Summary reports outlining blood lead level testing are posted online on a bi-weekly basis, and we work closely with local partners to fulfill data requests as we receive them," she said.

This is what the press is reporting on.. final report not out yet.

*Nancy*

Nancy Grijalva  
Assistant to Nick Lyon, Director  
Michigan Department of Health and Human Services

December 29, 2015

Dear Governor Snyder:

The Flint Water Advisory Task Force, which you appointed on October 21, 2015, has devoted considerable effort and countless hours to our review of the contamination of the Flint water supply: what happened, why it occurred, and what is needed to prevent a recurrence in Flint or elsewhere in the state. We have also been assessing ongoing mitigation efforts to help assure that short- and long-term public health issues and water management concerns will be properly addressed to safeguard the health and well being of the Flint community.

Shortly after we began our work, we recognized the immediate need for better coordination of the state's response to the ongoing public health issues in Flint, and for assignment of a single person to provide this coordination. We addressed these concerns in a letter to you on December 7, 2015, and you responded with immediate adoption of these recommendations. We thank you for the commitment your response demonstrates.

In our continuing efforts, we have now interviewed numerous individuals at state and local levels; reviewed many documents, articles, and emails; and deliberated repeatedly as a group. Both individually and as a group, we have visited Flint several times during the past several weeks to meet with citizens, public health officials and healthcare providers, individuals who have water management responsibilities at the city and county levels, and other public officials.

It is clear to us, particularly as we listen to the people of Flint, that it is both critical and urgent to establish responsibility for what happened in their community and to ensure accountability. This is a first step in a long process to re-establish the trust they no longer have in their government and the agencies whose responsibility it is to protect their health. It is urgent because this deep distrust of government continues to compromise the effective delivery of protective services designed to address ongoing public health issues. It is for these reasons that we are sending this letter at this time.

**We believe the primary responsibility for what happened in Flint rests with the Michigan Department of Environmental Quality (MDEQ). Although many individuals and entities at state and local levels contributed to creating and prolonging the problem, MDEQ is the government agency that has responsibility to ensure safe drinking water in Michigan. It failed in that responsibility and must be held accountable for that failure.**

The Safe Drinking Water Act (SDWA) places responsibility for compliance with its requirements on the public water system. In this instance, the City of Flint had the responsibility to operate its water system within SDWA requirements, under the jurisdiction of the MDEQ. The role of the MDEQ is to **ensure** compliance with the SDWA through its regulatory oversight as the primary agency having enforcement responsibility for the Flint water system.

The MDEQ failed in three fundamental ways.

#### **Regulatory Failure**

We believe that in the Office of Drinking Water and Municipal Assistance (ODWMA) at MDEQ, a culture exists in which "technical compliance" is considered sufficient to ensure safe drinking water in Michigan.

This minimalist approach to regulatory and oversight responsibility is unacceptable and simply insufficient to the task of public protection. It led to MDEQ's failure to recognize a number of indications that switching the water source in Flint would—and did—compromise both water safety and water quality. The MDEQ made a number of decisions that were, and continue to be, justified on the basis that federal rules "allowed" those decisions to be made. ODWMA must adopt a posture that is driven not by this minimalist technical compliance approach, but rather by one that is founded on *what needs to be done to assure drinking water safety*.

A culture change must occur within ODWMA. It must be driven by a mission that is aspirational regarding the role of the MDEQ in ensuring the safety and the quality of Michigan's drinking water. We believe, and have expressed to MDEQ Director Dan Wyant, that as a Great Lakes State, Michigan should aspire to have the safest drinking water in the nation, rather than merely aiming for technical compliance with regulatory requirements.

### **Failure in Substance and Tone of MDEQ Response to the Public**

Throughout 2015, as the public raised concerns and as independent studies and testing were conducted and brought to the attention of MDEQ, the agency's response was often one of aggressive dismissal, belittlement, and attempts to discredit these efforts and the individuals involved. We find both the tone and substance of many MDEQ public statements to be completely unacceptable. In a real way, the MDEQ represents the public, including the very individuals it treated dismissively and disrespectfully in public statements. We recognize that the agency might disagree with the opinions of others on a variety of issues, including testing protocol, interpretation of testing results, the requirements of federal law and rules, and other matters. What is disturbing about MDEQ's responses, however, is their persistent tone of scorn and derision. In fact, the MDEQ seems to have been more determined to discredit the work of others—who ultimately proved to be right—than to pursue its own oversight responsibility.

### **Failure in MDEQ Interpretation of the Lead and Copper Rule**

The federal Lead and Copper Rule (LCR) is central to what happened in Flint, because that rule, at least theoretically, is designed to prevent lead and copper contamination of drinking water. The federal LCR calls for "optimized corrosion control treatment," which the MDEQ did not require in the switch to the Flint River. Prior to the switch, MDEQ staff instructed City of Flint water treatment staff that corrosion control treatment (CCT) was not necessary until two six-month monitoring periods had been conducted. The need for CCT would be evaluated after the results from those two monitoring periods were reviewed. The decision not to require CCT, made at the direction of the MDEQ, led directly to the contamination of the Flint water system.

The MDEQ seems to have taken different positions on whether it faithfully followed the LCR in the Flint situation. It first maintained that it followed the LCR, then stated that it did not follow the rule properly, and most recently claimed that a federal memorandum issued by the US EPA in early November 2015 suggests that the original MDEQ interpretation was possibly correct.

We are not convinced. Even the MDEQ's latest interpretation of the US EPA's November memorandum is overly legalistic and misunderstands the intent of the LCR, which is to minimize risks of lead and copper exposure for human health.

We believe ODWMA's single-minded legalistic focus is the heart of the problem, and it is part of the "technical compliance" culture described above. ODWMA should not be basing its actions solely on a

legally possible interpretation of the LCR. It should be focusing on how to protect Michigan's citizens from lead in drinking water.

We met with MDEQ Director Wyant on December 16, 2015, to discuss these issues, as well as many others. We note his substantial agreement with many of our conclusions, particularly as it relates to the regulatory failure and the abysmal public response of his agency. It is our understanding that he has drawn similar conclusions in his own evaluation of the MDEQ's role in the Flint water crisis. At the same time, it was disappointing to hear his weak defense of the CCT decision based on the EPA's November 2015 memorandum.

We are not finished with our work. Other individuals and entities made poor decisions, contributing to and prolonging the contamination of the drinking water supply in Flint. As an example, we are particularly concerned by recent revelations of MDHHS's apparent early knowledge of, yet silence about, elevated blood lead levels detected among Flint's children. We also feel it important to further review local government decision processes under emergency management. Our final report will highlight and discuss those concerns, among many others, to provide some context to a comprehensive series of recommendations. **As stated earlier in this letter, however, we believe that establishing responsibility is a critical and urgent need, and one that should not wait for our final report in 2016. Individuals and agencies responsible must be held accountable in a timely fashion.**

It is our hope that the heightened awareness of the dangers of lead poisoning can be an opportunity to make Michigan safer, particularly for its children. Drinking water must be recognized as a potential source of health risk exposure when water lines and fixtures containing lead are disturbed or compromised. Proper testing, not only in high-risk areas but also in facilities serving children (e.g., schools), must be considered. Facilitating long-term financing of a model public health program, and also replacement of lead-containing water service lines and fixtures, would enable Michigan to realize a positive lasting legacy from the tragedy of the Flint water crisis. Our final report will address some of these issues.

The City of Flint's water customers—fellow Michigan citizens—were needlessly and tragically exposed to toxic levels of lead through their drinking water supply. They deserve a commitment to properly assess responsibility and ensure accountability. They also deserve a commitment to needed mitigation in both the short and long term. The Flint water crisis never should have happened. Having failed to prevent it, state government should coordinate a sustained, public-health-focused response to remedy, to the fullest extent possible, the impacts on the Flint community.

Respectfully yours,

Flint Water Advisory Task Force:

Matt Davis  
Chris Kolb  
Larry Reynolds  
Eric Rothstein  
Ken Sikkema

Hi Nick,

Attached is a request from a local pediatrician who is trying to identify some lead level trends in Flint. She said there was a delay in getting a response because a DHHS employee was out of the office. Because of the ongoing lead issues in Flint I am doing everything I can to ensure we are helping citizens. Any assistance you can give to move this issue quickly I would really appreciate it.

Thank you,

Andy

Below is the data requested from MCIR with attached IRB approval.  
Looking for all blood lead levels for kids 5 years and under living in 48501-48507 from 1/1/13 to current with the below fields.

Subject: FW: IRBNet Board Action

Bob, I just received IRB approval to look at the City of Flint blood lead levels. I would love to get the raw data if that is possible. Attached is my study proposal and the IRB approval.

Specific fields that we are looking for include:  
MCIR ID or some sort of identifier

Zip code  
Date of Birth  
Date of Blood lead level  
Lead level

Would greatly appreciate your assistance! Thanks!

STUDY TITLE: [807433-1] Analysis of Pediatric Blood Lead Levels  
VERSION #: Version 1  
SUBMISSION TYPE: New Project

ACTION: APPROVED  
APPROVAL DATE: September 16, 2015  
EXPIRATION DATE: September 15, 2016  
REVIEW TYPE: Expedited Review

Dear Dr. Hanna-Attisha:

As Chair of the Hurley Medical Institutional Review Board, an **Expedited Review** was conducted to review and consider for approval the following documents submitted with the above-referenced research study:

- Application Form - Hurley IRB Application.doc (UPDATED: 09/14/2015)
- HIPAA Waiver - Waiver\_of\_Authorization[1].doc (UPDATED: 09/14/2015)
- Other - List of variables in excel (in place of a data collection sheet) (UPDATED: 09/16/2015)
- Other - SRC letter (UPDATED: 09/15/2015)
- Other - Expedited approval form (UPDATED: 09/14/2015)
- Proposal - Study Proposal IRB BLL MHA 9 15 15.docx (UPDATED: 09/16/2015)

It was determined that the proposed research activities involve no more than minimal risk to human subjects. This expedited approval was based on its applicability to 45 CFR 46.110, [5]:
